Four key components of green bonds, typically described in issuers' green bond frameworks

1

Use of proceeds

Climate change mitigation or adaptation, conservation of natural resources, biodiversity, pollution prevention...

2

Process for asset evaluation and selection

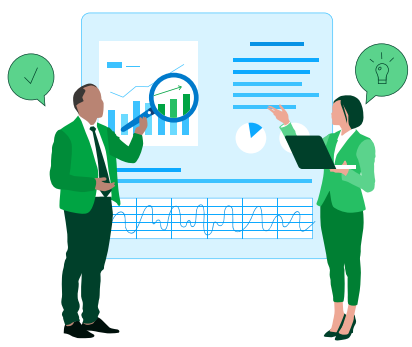
Process and criteria governing the selection of assets to be allocated to green financing.

3

Management of proceeds

Monitoring of proceeds (green sub-account, temporary investments... to be explained).

4



Reporting

Information on the impact of the use of proceeds, to be updated and provided annually.
