

Wind resource

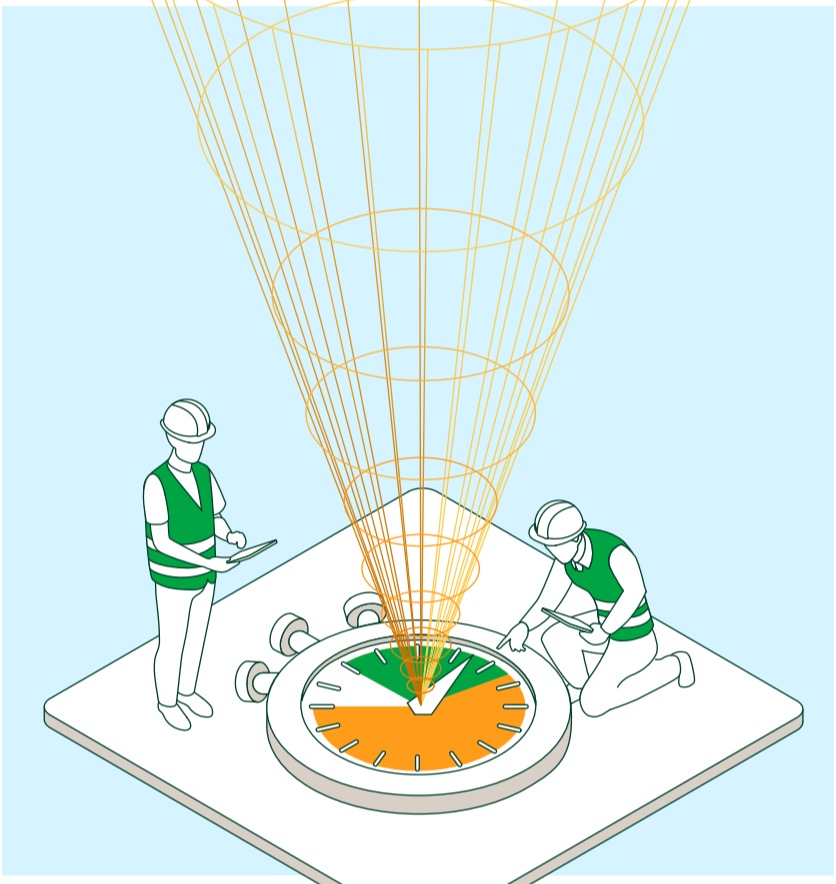

Avoids the risks associated with working at heights, as the weather stations are manually assembled at heights ranging from 80 to 120 metres.

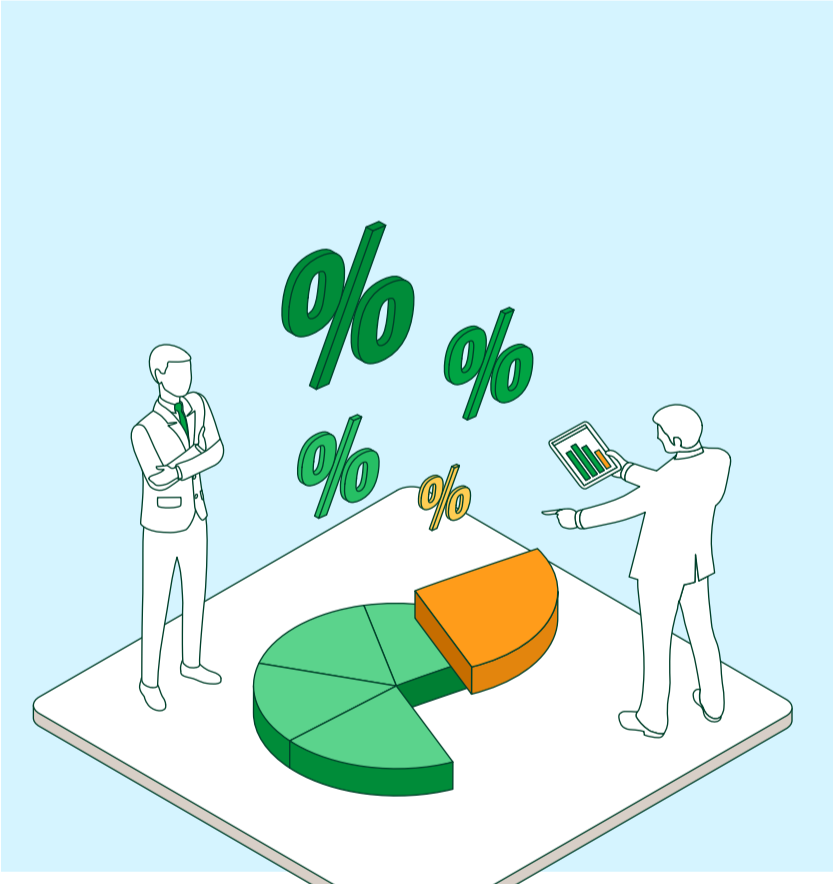

Less environmental and visual impact.

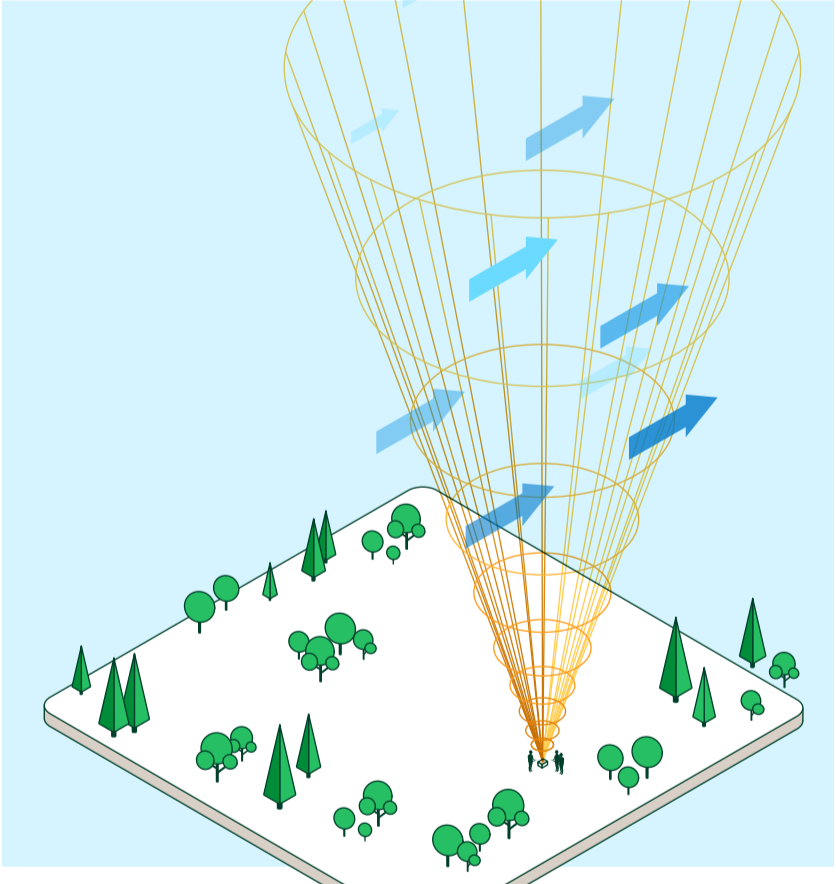

Reduces processing time to initiate measurements.

Reduces measurement time at each point.

Reduces cost as a single Lidar device is equivalent to two 80-metre measurement towers.

Allows measurements to be taken up to 300 metres in height.

Measurements are also bankable and approved by international standards IEC (International Electrotechnical Commission), certifiers and technologists.
