

# HOW TO EXTEND THE LIFE OF WASTE?

The life cycle of an object, for example, a plastic bottle, can be changed to prevent it becoming waste. How?

## UPCYCLING

When we do something creative with the bottle and, as a result, create a new higher value object.

## BY REUSING IT

Instead of throwing it in the bin, refill it with water to extend its life cycle.

## DOWNCYCLING

When we segregate it, to be sent to a recycling plant.

## RECYCLING

Instead of throwing it away, we can use it for something other than its original purpose, for example as a plant pot.
