

HOW TO EXTEND THE LIFE OF WASTE?

The life cycle of an object, for example, a plastic bottle, can be changed to prevent it becoming waste. How?

UPCYCLING

When we do something creative with the bottle and, as a result, create a new higher value object.

BY REUSING IT

Instead of throwing it in bin bin, refill it with water to extend its life cycle.

DOWNCYCLING

When we segregate it, to be sent to a recycling plant.

RECYCLING

Instead of throwing it away, we can use it for something other than its original purpose, for example as a plant pot.
