

THE STRONG POINTS OF COBOTS

They become part of the human-machine team

They do not replace human labour, but work alongside operators.

They learn new tasks easily

Thanks to technologies like Artificial Intelligence and Machine Learning, they never stop learning.

They take over dangerous tasks

Releasing workers from this type of work reduces sick leave and occupational illness.

They can be moved about easily

Their size and weight make them easy to position at any point in the production chain.

They never injure operators

They have sensors that slow them down in case of risk to humans, among other features.

They boost productivity

They are complementary to the operator and help to optimise and modernise the production process.

They reduce costs

They are less expensive and pay for themselves more quickly than traditional industrial robots.
