

The strong points of cobots

1 They become part of the human-machine team

They do not replace human labour, but work alongside operators.

2 They take over dangerous tasks

Releasing workers from this type of work **reduces sick leave and occupational illness.**

3 They never injure operators

They have sensors that slow them down in case of risk to humans, among other features.

4 They reduce costs

They are less expensive and pay for themselves more quickly than traditional industrial robots.

5 They learn new tasks easily

Thanks to technologies like **Artificial Intelligence and Machine Learning**, they never stop learning.

6 They can be moved about easily

Their size and weight make them easy to position at any point in the production chain.

7 They boost productivity

They are complementary to the operator and help to **optimise and modernise the production process.**
