

The U.S. company Quanta Services visits Iberdrola's Bilbao Hub

- *The purpose of the invitation is to present the activity and innovation projects of the Basque company to leading companies in the electricity sector.*
-

A group of representatives of the U.S. company Quanta Services has visited Iberdrola's facilities in Spain. Among the visits, the one to the Basque company's Global Smart Grids Innovation Hub in Bilbao stands out. The GSGIH is Iberdrola's global headquarters for innovation in smart grids.

During the visit, Quanta Services representatives were accompanied by Iberdrola's Global Purchasing Management and Avangrid, the US subsidiary of the Iberdrola Group.

Thus, they were able to learn first-hand about the smart grid innovation projects being developed at Iberdrola's Hub in the Biscayan capital in order to continue advancing in decarbonization. In this sense, electricity grids have a fundamental role to play in driving the energy transition.

The North American company Quanta Services builds power lines and installs fiber optics, among others, in the Americas.
