

# THE ARACHNOPTER, IN DETAIL

## Versatile multi-rotor

The design of the different arm kits was inspired by maple seeds so it flies **farther**, in **stronger winds (up to 20 m/s)** and with **heavier loads**.

## Six motors

Able to fly for **35 minutes on a single battery** and carry a load equivalent to its weight.

## Titanium construction

Lightweight, **robust** and corrosion **resistant**.

## Waterproof and submersible

It works in the rain and in the marine environment.

## Full disassembly

It can be **transported in a small space**.

## Manual or remote control

Easy to operate using any **PC o Mac**.
