

Security

on every click when browsing the Internet

When you surf the Internet, there are many threats that hide behind each click, among others...

Malicious pages

Links that lead to fraudulent sites

Files with viruses

Avoid falling into them and **move on the Internet safely:**

When providing sensitive information (passwords, bank data...) in a web, **check that on the browser bar appears HTTPS or a green lock.**

Disable the "remember passwords" option and close your sessions on exit.

Occasionally delete browsing history, cookies and temporary files.

Pay attention to links and attachments before clicking on them.

Keep your computers up-to-date (operating system, browsers and applications) and install, whenever possible, an antivirus.
