

# Applications: download in a secure manner

All applications request permissions, but ... **Have you stopped to review them?**

There are "spy" applications that can get access your **information** (camera, photos, contacts, SMS ...) and take full control of your device.

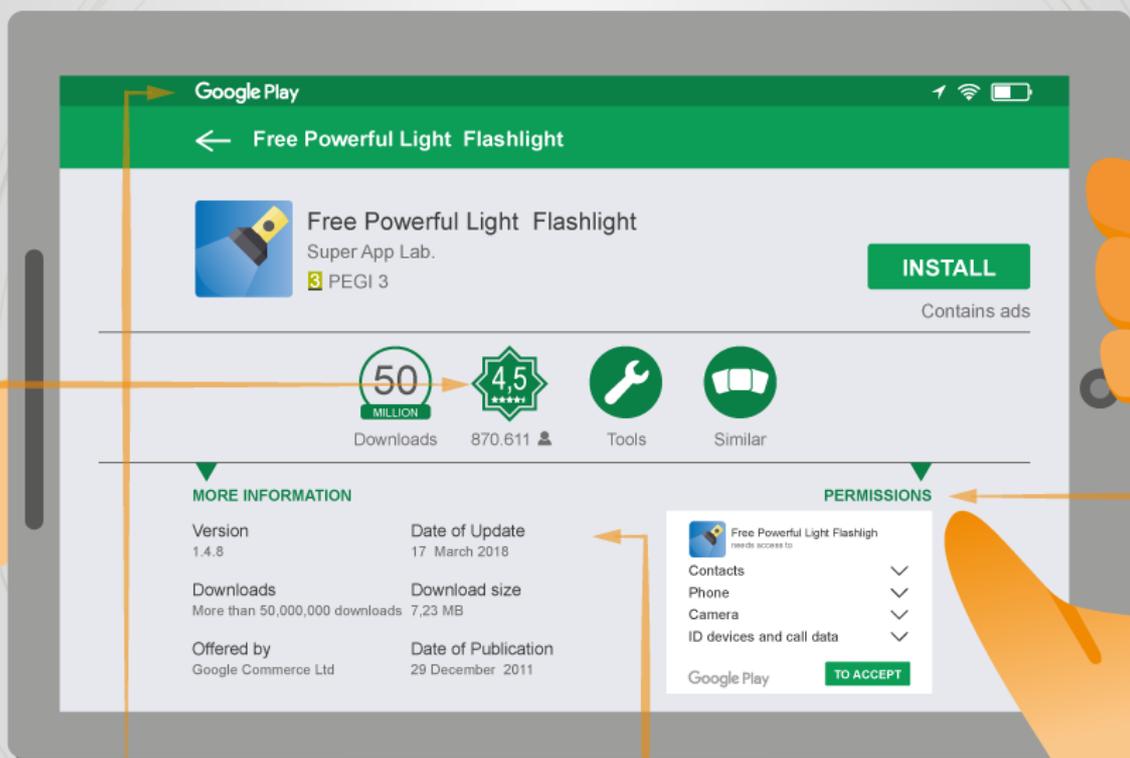

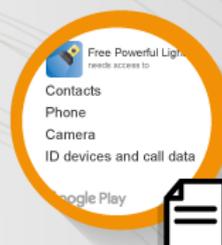

Do not let this happen. Before downloading an application, pay attention and:

Check the **ratings and opinions** of other users.

Check the **permissions it requests**. If it asks for more than necessary, discard the app and look for another.

Download only from **official sites**.

Strengthen security by **keeping your devices and applications updated**.
