MeteoFlow

The project in detail
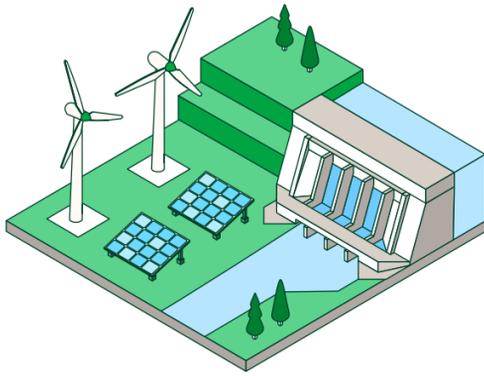

01
What is MeteoFlow?

Estimation of the electricity production of any renewable installation and weather forecasting at its sites

Integrated self-development system

Projections for wind, photovoltaic and hydroelectric plants

Serving more than 16GW in 12 countries
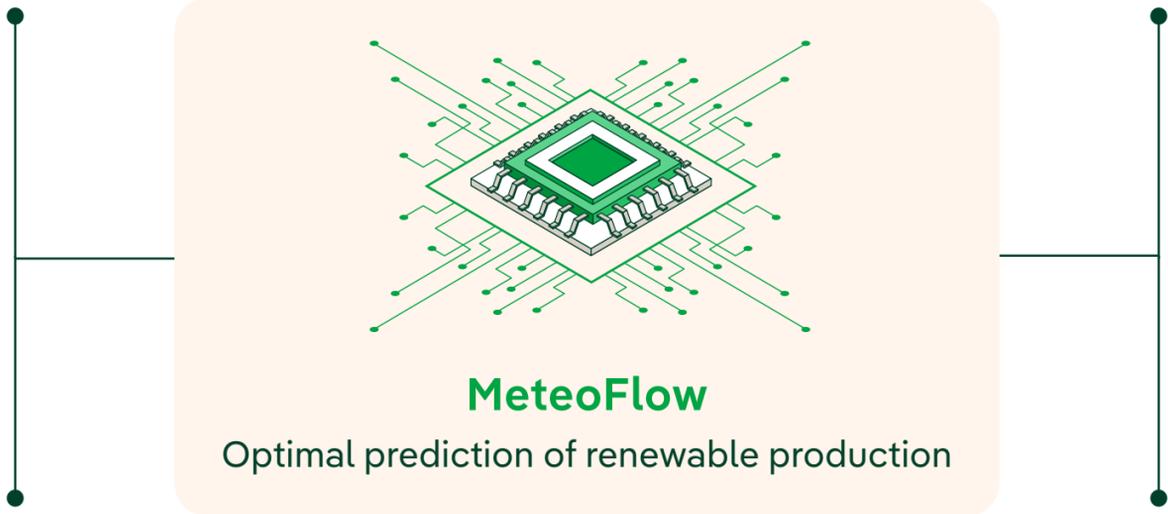

02
How does it work?

**Data processing and optimisation**

Global weather information

Real-time production data

MeteoFlow
Optimal prediction of renewable production

Historical production data

Predictive machine learning models

03
What is it for?

Sale of energy produced

Choice of maintenance windows

Reporting
