Biodiversity

in a world of constante change

Between **1970 and 2020** the size of the populations of species was reduced by **73%**

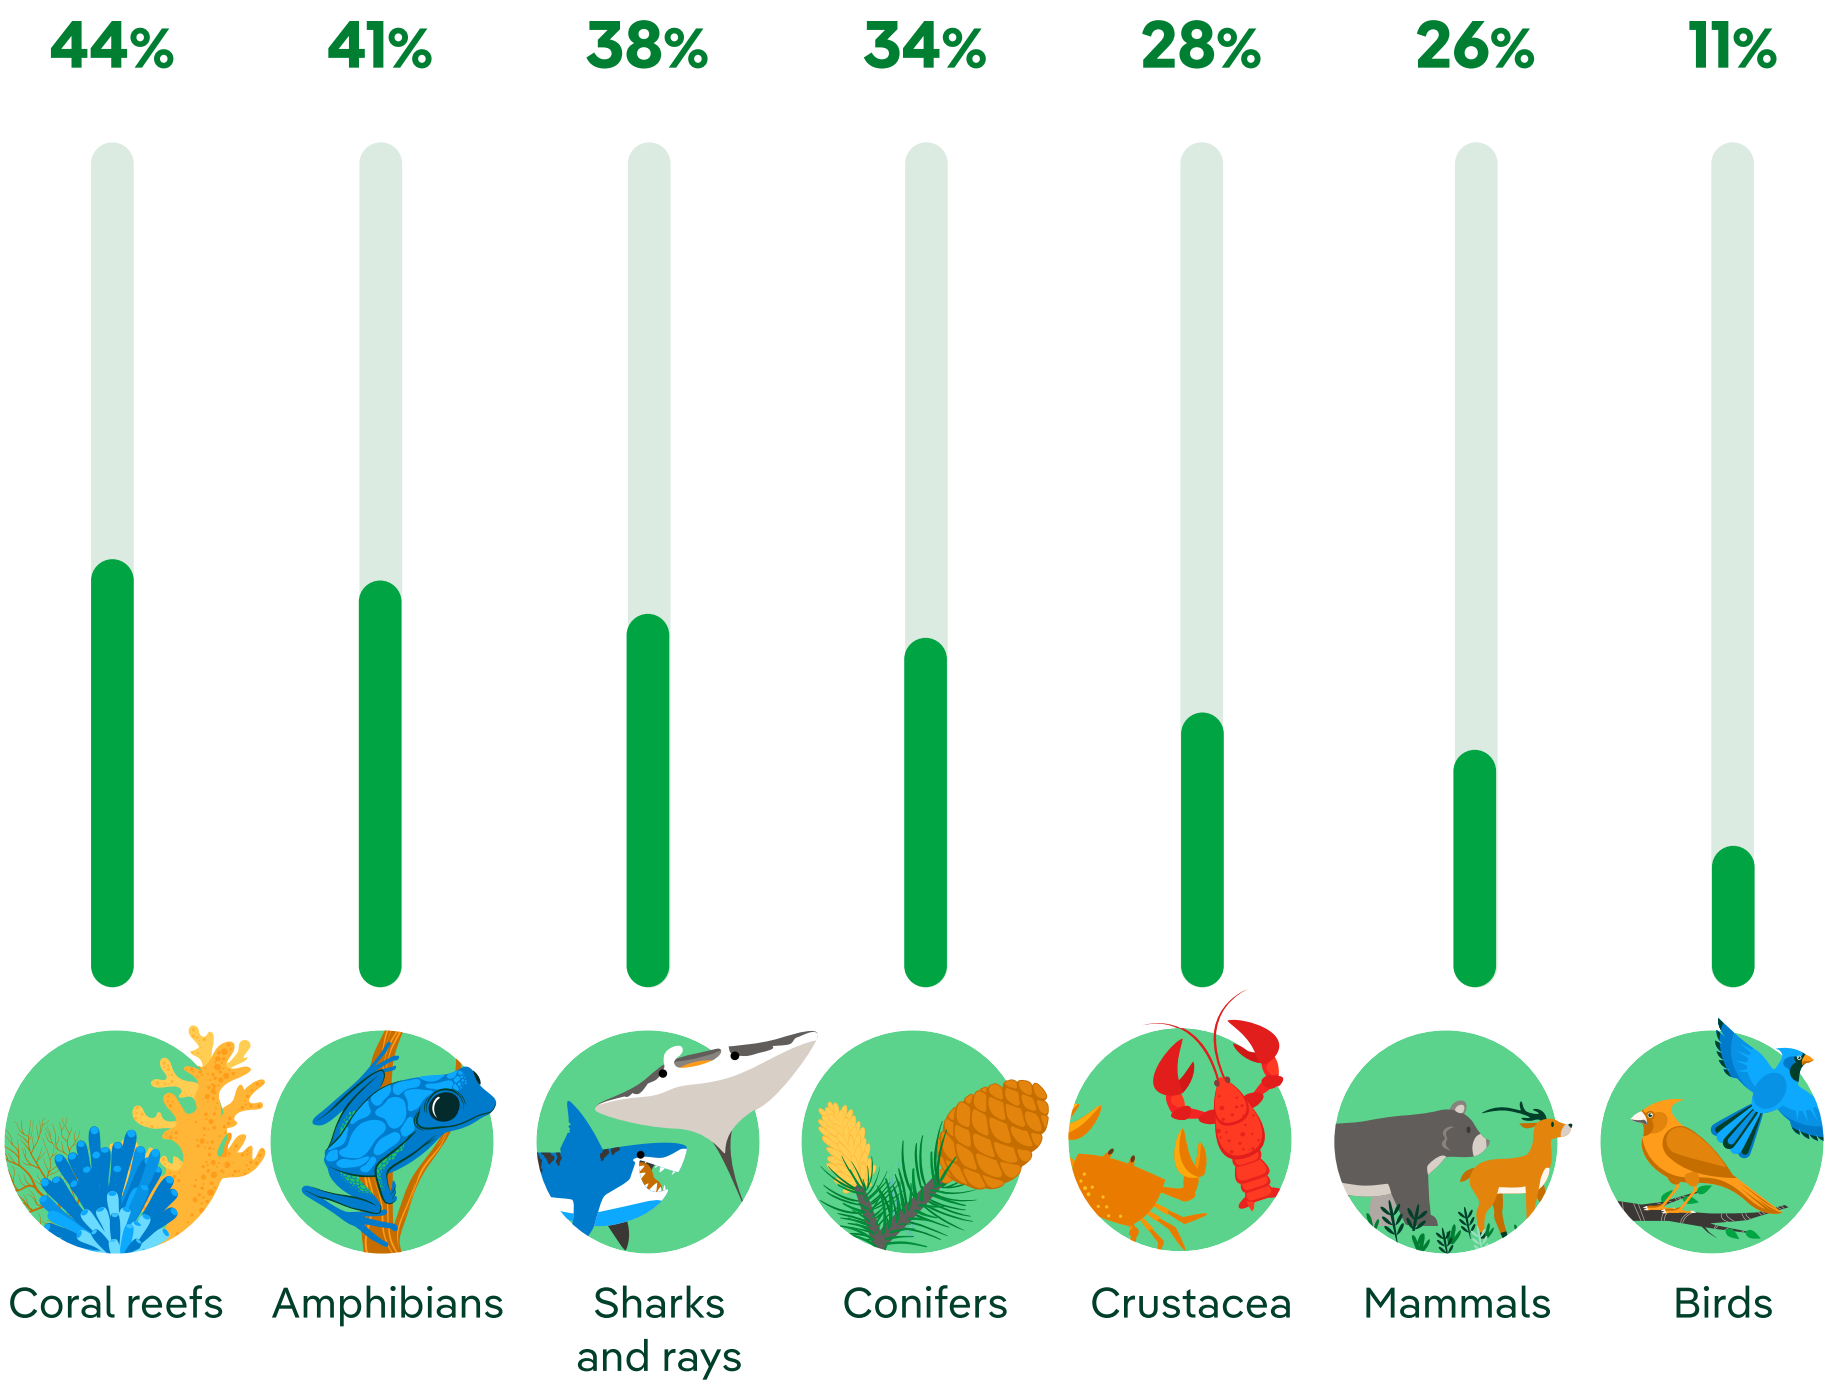

73%

The loss of species is particulary acute in the tropics: in **South America and Central America,** this loss amounted to **94%**

94%

The loss of **biodiversity** in detail

Currently, more than **48.600 species** are in danger of extinction, which means **28%** of all species evaluated.

What **future** do we want?

More ambitious **measures are required** to halt the loss of biodiversity

Indicators should help us make **good policies** and monitor their evolution
