

# How does aerothermal heat pump work?

## Heating

Radiators, underfloor heating.

## Cooling

Fan coils, underfloor heating.

## Indoor unit

Device located **inside the building** that **heats, cools and stores** water that is **distributed** for renewable heating, cooling and hot water.

## Outdoor unit

**Heat pump** installed **outside the home** to extract energy from the ambient air. It is slightly larger than an air conditioning machine.

## Hot water

Taps.
