Neurotechnology
and the future of brain implants

Although it may sound like science fiction today, one of the world's leading computer security companies is targeting the following **milestones** over the next decades:

| Today	2020's	2030's	2040's
Brain stimulation to help restore memories	Enhancement and rewriting of damaged memories in the brain	First commercial implants for memory stimulation	Manipulation of memories, such as deletion of unhappy ones
