AUDITOR’S REPORT
Auditor’s Report on Iberdrola, S.A. and Subsidiaries

(Together with the consolidated annual accounts and consolidated directors’ report of Iberdrola, S.A. and subsidiaries for the year ended 31 December 2022)

(Translation from the original in Spanish. In the event of discrepancy, the Spanish-language version prevails.)
Independent Auditor's Report on the Consolidated Annual Accounts

(Translation from the original in Spanish. In the event of discrepancy, the Spanish-language version prevails.)

To the Shareholders of Iberdrola, S.A. and subsidiaries

REPORT ON THE CONSOLIDATED ANNUAL ACCOUNTS

Opinion

We have audited the consolidated annual accounts of Iberdrola, S.A. (the "Parent") and subsidiaries (together the "Group"), which comprise the consolidated statement of financial position at 31 December 2022, and the consolidated income statement, consolidated statement of comprehensive income, consolidated statement of changes in equity and consolidated statement of cash flows for the year then ended, and consolidated notes.

In our opinion, the accompanying consolidated annual accounts give a true and fair view, in all material respects, of the consolidated equity and consolidated financial position of the Group at 31 December 2022 and of its consolidated financial performance and its consolidated cash flows for the year then ended, and consolidated notes.

Basis for Opinion

We conducted our audit in accordance with prevailing legislation regulating the audit of accounts in Spain. Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Consolidated Annual Accounts section of our report.

We are independent of the Group in accordance with the ethical requirements, including those regarding independence, that are relevant to our audit of the consolidated annual accounts pursuant to the legislation regulating the audit of accounts in Spain. We have not provided any non-audit services, nor have any situations or circumstances arisen which, under the aforementioned regulations, have affected the required independence such that this has been compromised.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.
Key Audit Matters

Key audit matters are those matters that, in our professional judgement, were of most significance in the audit of the consolidated annual accounts of the current period. These matters were addressed in the context of our audit of the consolidated annual accounts as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

**Impairment of non-financial assets**

See notes 3.i, 14 and 41 to the consolidated annual accounts

<table>
<thead>
<tr>
<th>Key audit matter</th>
<th>How the matter was addressed in our audit</th>
</tr>
</thead>
</table>
| The principal activities of the different businesses included in the consolidated annual accounts of the Group are related to the generation, transmission, distribution and supply of energy, and therefore the balances recognised under other intangible assets and property, plant and equipment are highly significant. Furthermore, as a result of the acquisitions made in recent years, the consolidated annual accounts include goodwill for an amount of Euros 8,189 million. Under IFRS-EU, the recoverable amount of assets must be analysed when indications of impairment have been identified. Goodwill, intangible assets with indefinite useful lives and in-process intangible assets are not amortised, but are instead tested for impairment at least on an annual basis. The calculation of the recoverable amount of non-current assets indicated in the preceding paragraphs is determined through the use of methodologies based on discounted cash flows, the estimation of which requires the use of a high degree of judgment, as well as the use of assumptions and estimates. Due to the high level of judgment required, the uncertainty associated with these estimates and the significance of the amount of non-current assets, this has been considered a key audit matter. | Our audit procedures included the following:  
- Assessing the design and implementation of the key controls related to the process of evaluating the existence of indications of impairment.  
- Assessing the design and implementation of the key controls related to the process of determining recoverable amount.  
- Assessing the reasonableness of the methodology used to calculate value in use and the main assumptions considered, with the involvement of our valuation specialists.  
- Analysing the consistency of the estimated growth in future cash flows with the business plans approved by the governing bodies, including their consistency with the Group’s strategy to address climate change and the Paris Agreement.  
- Performing a comparative analysis of the cash flow forecasts estimated in the prior year with the actual cash flows obtained (retrospective analysis).  
- Evaluating the sensitivity of the recoverable amount to changes in certain assumptions that can be considered reasonable.  
- Assessing whether the disclosures in the consolidated annual accounts meet the requirements of the applicable financial reporting framework. |
### Provisions for pensions and similar obligations

**See notes 3.p and 26 to the consolidated annual accounts**

<table>
<thead>

<th>Key audit matter</th>
<th>How the matter was addressed in our audit</th>
</tr>
</thead>
</table>
| The Group has important commitments with personnel in relation to retirement and other long-term liabilities. These commitments are mainly in Spain, the United States, the United Kingdom and Brazil. The fair value of the different plan assets amounts to Euros 6,671 million, of which Euros 1,540 million is classified as Level 3 of the fair value hierarchy. Non-material variations in the main assumptions that determine the valuation of Level 3 assets could have a significant impact on the amounts recognised in the consolidated annual accounts and we have therefore considered this a key audit matter. | Our audit procedures included the following:  
- Assessing the design and implementation of controls related to the valuation process.  
- Performing an analysis of the reasonableness of the valuation of longevity swap contracts by comparison with the results independently obtained by our valuation specialists.  
- Performing substantive tests of detail on a sample of Level 3 assets to determine the reasonableness of their valuation based on information from independent and qualified third parties.  
- Submitting confirmation requests to third parties to confirm the reasonableness of the valuation of a sample of financial assets.  
- Assessing whether the disclosures in the consolidated annual accounts meet the requirements of the applicable financial reporting framework. |
The Group's businesses that carry out energy supply activities must make estimates of unbilled supplies to end customers in the period between the last meter reading and the end of the fiscal year. Estimated unbilled energy supplied amounts to Euros 3,127 million.

Unbilled energy supplied is estimated based on internal and external information that is compared with the readings contained in the management systems used by the businesses. Revenue is calculated by multiplying the volume of estimated unbilled consumption, a process that is subject to a high degree of uncertainty, by the tariff agreed for each customer.

Determining the revenue from unbilled energy supplied requires the use of estimates by Group management with the application of criteria, judgements and assumptions in its calculations, and we have therefore considered this a key audit matter.

Our audit procedures included the following:

- Analysing the design, implementation and operating effectiveness of the key controls related to the estimation of unbilled revenue.
- Evaluating the reasonableness of the calculation model used by comparing the estimates made at the close of the previous period and actual invoicing data (retrospective analysis).
- Assessing the reasonableness of the volume of unbilled energy through an analysis of historical information and other available internal and external data.
- Evaluating a selected sample of the tariffs applied by comparing them with the data contained in the customer contract databases.
- Assessing whether the disclosures in the consolidated annual accounts meet the requirements of the applicable financial reporting framework.

Other Information: Consolidated Directors’ Report

Other information solely comprises the 2022 consolidated directors’ report, the preparation of which is the responsibility of the Parent’s Directors and which does not form an integral part of the consolidated annual accounts.

Our audit opinion on the consolidated annual accounts does not encompass the consolidated directors’ report. Our responsibility regarding the information contained in the consolidated directors’ report is defined in the legislation regulating the audit of accounts, as follows:

a) Determine, solely, whether the consolidated non-financial information statement and certain information included in the Annual Corporate Governance Report and the Annual Report on Directors’ Remuneration, as specified in the Spanish Audit Law, have been provided in the manner stipulated in the applicable legislation, and if not, to report on this matter.
b) Assess and report on the consistency of the rest of the information included in the consolidated directors' report with the consolidated annual accounts, based on knowledge of the Group obtained during the audit of the aforementioned consolidated annual accounts. Also, assess and report on whether the content and presentation of this part of the consolidated directors’ report are in accordance with applicable legislation. If, based on the work we have performed, we conclude that there are material misstatements, we are required to report them.

Based on the work carried out, as described above, we have observed that the information mentioned in section a) above has been provided in the manner stipulated in the applicable legislation, that the rest of the information contained in the consolidated directors’ report is consistent with that disclosed in the consolidated annual accounts for 2022, and that the content and presentation of the report are in accordance with applicable legislation.

**Directors' and Audit Committee's Responsibility for the Consolidated Annual Accounts**

The Parent's Directors are responsible for the preparation of the accompanying consolidated annual accounts in such a way that they give a true and fair view of the consolidated equity, consolidated financial position and consolidated financial performance of the Group in accordance with IFRS-EU and other provisions of the financial reporting framework applicable to the Group in Spain, and for such internal control as they determine is necessary to enable the preparation of consolidated annual accounts that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated annual accounts, the Parent's Directors are responsible for assessing the Group’s ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Directors either intend to liquidate the Group or to cease operations, or have no realistic alternative but to do so.

The Parent's audit committee is responsible for overseeing the preparation and presentation of the consolidated annual accounts.

**Auditor's Responsibilities for the Audit of the Consolidated Annual Accounts**

Our objectives are to obtain reasonable assurance about whether the consolidated annual accounts as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor’s report that includes our opinion.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with prevailing legislation regulating the audit of accounts in Spain will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated annual accounts.
As part of an audit in accordance with prevailing legislation regulating the audit of accounts in Spain, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the consolidated annual accounts, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group’s internal control.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Parent’s Directors.

- Conclude on the appropriateness of the Parent’s Directors’ use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group’s ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor’s report to the related disclosures in the consolidated annual accounts or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor’s report. However, future events or conditions may cause the Group to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the consolidated annual accounts, including the disclosures, and whether the consolidated annual accounts represent the underlying transactions and events in a manner that achieves a true and fair view.

- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated annual accounts. We are responsible for the direction, supervision and performance of the Group audit. We remain solely responsible for our audit opinion.

We communicate with the audit committee of the Parent regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the Parent’s audit committee with a statement that we have complied with the applicable ethical requirements, including those regarding independence, and to communicate with them all matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.
From the matters communicated to the audit committee of the Parent, we determine those that were of most significance in the audit of the consolidated annual accounts of the current period and which are therefore the key audit matters.

We describe these matters in our auditor’s report unless law or regulation precludes public disclosure about the matter.

**REPORT ON OTHER LEGAL AND REGULATORY REQUIREMENTS**

**European Single Electronic Format**

We have examined the digital files of Iberdrola, S.A. and its subsidiaries for 2022 in European Single Electronic Format (ESEF), which comprise the XHTML file that includes the consolidated annual accounts for the aforementioned year and the XBRL files tagged by the Parent, which will form part of the annual financial report.

The Directors of Iberdrola, S.A. are responsible for the presentation of the 2022 annual financial report in accordance with the format and mark-up requirements stipulated in Commission Delegated Regulation (EU) 2019/815 of 17 December 2018 (hereinafter the “ESEF Regulation”).

Our responsibility consists of examining the digital files prepared by the Directors of the Parent, in accordance with prevailing legislation regulating the audit of accounts in Spain. This legislation requires that we plan and perform our audit procedures to determine whether the content of the consolidated annual accounts included in the aforementioned digital files fully corresponds to the consolidated annual accounts we have audited, and whether the consolidated annual accounts and the aforementioned files have been formatted and marked up, in all material respects, in accordance with the requirements of the ESEF Regulation.

In our opinion, the digital files examined fully correspond to the audited consolidated annual accounts, and these are presented and marked up, in all material respects, in accordance with the requirements of the ESEF Regulation.

**Additional Report to the Audit Committee of the Parent**

The opinion expressed in this report is consistent with our additional report to the Parent’s audit committee dated 24 February 2023.
Contract Period

We were appointed as auditor by the shareholders at the ordinary general meeting on 17 June 2022 for a period of two years, from the year ended 31 December 2021.

Previously, we had been appointed for a period of two years, by consensus of the shareholders at their general meeting, and have been auditing the annual accounts since the year ended 31 December 2017.

(*) The consolidated Statement of cash flows for 2021 is presented for comparison purposes only. Notes 1 to 54 to the accompanying consolidated Financial Statements and the Appendices are an integral part of the consolidated Statement of cash flows for the year ended 31 December 2022.
Notes to the consolidated Financial Statements for the year ended 31 December 2022

1. GROUP ACTIVITIES

Iberdrola, S.A. (hereinafter, IBERDROLA), a company incorporated in Spain and with registered address at Plaza Euskadi 5, in Bilbao, is the parent of a group of companies whose main activities are:

- Production of electricity from renewable and conventional sources.
- Sale and purchase of electricity and gas in wholesale markets.
- Transmission and distribution of electricity.
- Retail supply of electricity, gas and energy-related services.
- Other activities, mainly linked to the energy sector.

The aforementioned activities are performed in Spain and abroad, and totally or partially either directly by IBERDROLA or through the ownership of shares or other equity investments in other companies, subject in all cases to the legislation applicable at any given time and, in particular, to the prevailing laws in the electricity industry. The IBERDROLA Group carries out its activities mainly in five countries in the Atlantic region: Spain, the United Kingdom (UK), the United States of America (USA), Mexico and Brazil.

2. BASIS OF PRESENTATION OF THE CONSOLIDATED FINANCIAL STATEMENTS

2.a) Accounting legislation applied

The IBERDROLA Group’s 2021 consolidated Financial Statements were approved by the shareholders at the General Meeting held on 17 June 2022.
At 31 December 2022, the consolidated Financial Statements presented negative working capital of EUR 5,472 million. The directors declare the deficit will be offset by the generation of funds from the IBERDROLA Group’s businesses. As indicated in Note 4, the IBERDROLA Group has undrawn borrowings amounting to EUR 17,754 million.

These consolidated Financial Statements have been prepared on a historical cost basis, except for equity instruments and derivative financial instruments, which have been measured at fair value. The carrying amounts of assets and liabilities that are hedged at fair value are adjusted to reflect variations in their fair value arising from the hedged risk.

The accounting policies used in the preparation of these consolidated Financial Statements are the same as those used for the year ended 31 December 2021, except for the application on 1 January 2022 of the following amendments adopted by the European Union to be applied in Europe:

- **Amendments to IAS 37: Onerous Contracts — Costs of Fulfilling a Contract**

  The amendments to IAS 37 specify the costs to be considered when determining the costs of fulfilling a contract in order to assess whether or not the contract is onerous. In particular, fulfilment costs include both incremental costs and other costs directly related to the contract.

  Until 1 January 2022, the IBERDROLA Group only considered incremental costs as the contract fulfilment costs. As a result of the amendments, the IBERDROLA Group has revised its provisions for onerous contracts, mainly in relation to agreements for the sale of electricity and gas.

  These amendments apply to contracts under which not all of the performance obligations have been fulfilled as at 1 January 2022 (date of initial application). The effect of applying the amendments on 1 January 2022 has resulted in a net tax effect of EUR 75 million under “Other reserves” in the consolidated Statement of financial position (Notes 27 and 34).

- **Amendments to IAS 16: Property, Plant and Equipment — Proceeds before Intended Use**

  Under the amendments, proceeds earned before an asset of property, plant and equipment is available for its intended use must be recognised in profit or loss, and it is prohibited to deduct such revenue from the cost of the asset. The amendments apply with retroactive effect to facilities that were commissioned from 1 January 2021 onwards, without having had a significant impact on the date of first application.

  Furthermore, the entry into force on 1 January 2022 of the Annual Improvements — 2018-2020 Cycle and the Amendments to IFRS 3: Reference to the Conceptual Framework has had no effect on these consolidated Financial Statements.
Change of accounting criteria

In 2021, the IBERDROLA Group changed its accounting criteria in relation to the accounting recognition of deviations in market price, as per the methodology set out in Royal Decree 413/2014 of 6 June, regulating the activity of electricity production from renewable energy sources, cogeneration and waste, when the actual market prices corresponding to the different half-periods of the regulatory useful life of the asset are lower (positive adjustments) or higher (negative adjustments) than the prices estimated by the regulator at the beginning of the regulatory half-period that were used to determine the incentives to be received for the investments under the scope of the aforementioned regulations (Note 33).

The change responds to the publication by the National Securities Market Commission (CNMV), on 22 October 2021, of the “Criteria for accounting for the ‘value of adjustments due to deviations in market price’, in accordance with Section 22 of Royal Decree 413/2014”.

The IBERDROLA Group adopted the criteria published by the CNMV with retroactive effect back to 1 January 2021.

Standards issued pending application

At the date of these consolidated Financial Statements, the following standards, amendments and interpretations had been issued, effective for annual periods beginning on or after 1 January 2023:

<table>
<thead>
<tr>
<th>Standard</th>
<th>Mandatory application</th>
<th>IASB</th>
<th>European Union</th>
</tr>
</thead>
<tbody>
<tr>

</table>

(*) Yet to be approved by the European Union.

In relation to the amendments to IAS 12, these narrow the scope of the exemption to initial recognition, which is contained in paragraphs 15 and 24 of IAS 12. They do not, therefore, apply to transactions in which equal amounts of deductible and taxable temporary differences arise. As a result of the amendments, a deferred tax asset and a deferred tax liability should be recognised for the temporary differences arising from the initial recognition of the lease contract and of the decommissioning provisions. The IBERDROLA Group believes that the amendments will not have a significant impact on equity on the date of first application.
The IBERDROLA Group believes that the application of the other amendments would not have resulted in significant changes to these consolidated Financial Statements.

The IBERDROLA Group has not applied in advance of the authorisation for issue of these consolidated Financial Statements any published standard, interpretation or amendment that has not yet come into force.

2.b) Consolidation principles

Appendix I to these consolidated Financial Statements lists all IBERDROLA subsidiaries, jointly controlled entities and associates, together with the consolidation or measurement basis used and other related disclosures.

Subsidiaries

The subsidiaries over which the IBERDROLA Group exercises control are fully consolidated from the point at which such control is obtained.

The IBERDROLA Group considers that it controls a company when it is exposed, or has a right, to variable returns from its involvement in the company and has the capacity to influence such yields through that control.

Results of subsidiaries acquired or sold in the year are included in the consolidated Income statement as from the effective date of acquisition or up to the effective date of sale. All accounts and transactions between fully consolidated companies have been eliminated in consolidation.

On the acquisition date, assets, liabilities and contingent liabilities of a subsidiary are recognised at fair value. Any excess of the subsidiary’s acquisition cost over the market value of its assets and liabilities is recognised as goodwill, as it corresponds to assets that cannot be identified and measured separately. If the difference is negative, it is recognised as a credit in the consolidated Income statement.

In each business combination, non-controlling interests are initially recognised at fair value, or at an amount equivalent to their proportionate interest in the net identifiable assets of the acquired company on the takeover date. The value of non-controlling interests in equity and in the results of fully consolidated subsidiaries is presented under “Equity — Non-controlling interests” on the liabilities side of the consolidated Statement of financial position and under “Non-controlling interests” in the consolidated Income statement, respectively.

When there is a loss of control of a group company, its assets, liabilities and any non-controlling interests are derecognised. The resulting gains or losses are recognised in the Income statement. Holdings maintained in the subsidiaries whose control has been lost will be measured by their fair value on the date when this loss of control occurred.

The income obtained in stock purchase transactions with minority shareholders in controlled companies and the sale of stock without loss of control will be recognised as charged or credited to reserves.
Investments accounted for using the equity method

Investments accounted for using the equity method include both investments in associates and joint businesses. Associates are companies in which the IBERDROLA Group has significant influence, i.e., the power to intervene in decisions regarding financial and operating policies yet without having control or joint control. A joint business is a joint agreement in which the Group has the right to net assets of the agreement.

The result of measuring investments in associates using the equity method is recognised under the “Other reserves” and “Result of equity-accounted investees - net of taxes” headings of the consolidated Statement of financial position and Income statement, respectively.

Homogenisation

The closing date of the Financial Statements of the subsidiaries, jointly controlled entities and associates is 31 December.

The accounting policies applied by these companies are the same or have been harmonised with the ones used by the IBERDROLA Group.

Translation of the financial statements of foreign companies

The financial statements of each foreign company were drawn up in their respective functional currencies, defined as the currency of the economy in which each company operates and in which it generates and uses cash.

The financial statements of foreign companies have been translated applying the year-end exchange rate method. This method consists of translating to euros all the assets, rights and obligations at the exchange rates prevailing at the date of the consolidated Financial Statements and the average exchange rate for the year (provided that there are non-material transactions for which it is not deemed appropriate to use the average exchange rate) for the consolidated Income statement items, keeping equity at the historical exchange rate at the time of the acquisition (or at the average exchange rate of the year in which they were generated in the case of accumulated results). The resulting translation differences are taken directly to reserves.

2.c) Amendment to comparative information

Changes in segmentation (Note 8)

In such a fast-changing and competitive environment, organisations must continuously adapt and focus on value creation, requiring them to structure their operations, both from a shared vision of their activities in the different countries in which they operate, and from the perspective of building synergies across their businesses.
Over the course of 2022, and with a view to adapting to changes in its activities, the IBERDROLA Group streamlined its organisation, based on a two-pronged approach, namely the corporate and governance structure (or geographic area vision) and the business model (or business vision), which allows it, among other things, to successfully tackle the energy transition challenge.

As noted below, while the corporate and governance structure envisages decentralised decision-making by the company responsible in each case, the business model facilitates appropriate integration and coordination of the businesses and corporate areas in global terms so as to achieve the objectives established by the IBERDROLA Group as a whole. This organisational model therefore makes it possible to coordinate and combine the day-to-day management of the businesses in each country or territory while exchanging information and best practices among the companies belonging to the IBERDROLA Group, thus maximising the overall value of the businesses.

■ Corporate and governance structure

The corporate and governance structure of the IBERDROLA Group is guided by the principle of subsidiarity (pursuing a balance between the decentralised management of the Group’s companies, and leveraging the synergies derived from belonging to the Group), whilst respecting the self-governance of the companies within it.

The corporate and governance structure of the IBERDROLA Group comprises:

a. The holding company, Iberdrola, S.A., a listed entity whose main function is to act as the holder of the equity interests of the country subholding companies. Its powers relate to defining strategies and the governance model, as well as strategic oversight, organisation and co-ordination. In particular: (i) it approves the strategic targets and basic management guidelines and decides on strategically relevant matters with Group-wide projection; (ii) it defines the organisational model and supervises the implementation and development thereof; (iii) it establishes the necessary information-sharing mechanisms within the framework of strategic coordination; and (iv) it approves the budget and results of Iberdrola, S.A. and the consolidated results at Group level.

b. The country subholding companies, that group together the interests in the head of business companies:

- perform the aforementioned function of strategic oversight, organisation and coordination in their respective territories, countries or businesses for which they are responsible. As such, they disseminate, implement and ensure the monitoring of the policies, strategies and general guidelines defined at IBERDROLA Group level, with due attention to their individual nature and singularities and specifying the application thereof, approving, as the case may be, their own rules, to be applied, as appropriate, to their head of business companies;

- centralise the provision of services common to those head of business companies, in accordance with applicable law and, in particular, the legal provisions on the separation of regulated activities;
– agree, based on proposals from their respective chief executive officers, on the short- and long-term strategic objectives for the territories, countries or businesses for which they are responsible; and

– approve the budget and results of their company and the consolidated budget and results of their company and its subsidiaries and, within their remit, monitor and supervise their implementation in the respective territories, countries or businesses for which they are responsible.

The listed country subholding companies have a special framework of enhanced autonomy that ensures that the interests of the shareholders of such companies other than those of Iberdrola, S.A. enjoy sufficient protection and harmoniously co-exist with the wider interests of the Group companies and with those of the shareholders of Iberdrola, S.A.

c. The head of business companies undertake the day-to-day management and effective management of the business, as well as the day-to-day monitoring thereof. In particular:

– they effectively direct, control and manage the business conducted by their company, with responsibility for their day-to-day supervision;

– in the context of the strategy established by the country subholding company or its respective territory or country, they approve, at the proposal of their chief executive officer, the business’s short- and long-term strategic objectives, as well as the budgets and the update programmes for their development and delivery; and

– approve the company’s results.

In short, the IBERDROLA Group’s corporate and governance structure is based on a clear separation of, on the one hand, the strategic definition and supervision functions and, on the other hand, those of day-to-day governance and effective management.

■ Business model

The purpose of the Business Model is to define a Group organisation to coordinate the day-to-day management of the businesses in each country or territory, while exchanging information and best practices among the Group companies, thus maximising the overall value of the businesses thereof.

In this respect, the Business Model seeks to balance the Group’s activities, both by geographic area and by business.

The structuring of activities by geographical areas allows for decentralised decision-making wherever these decisions are to take effect. The main geographic areas are: Spain, United Kingdom, United States, Brazil, Mexico and Iberdrola Energía Internacional (encompassing all other countries, including Germany, France and Australia). Structuring the activity by business (Renewables and Sustainable Generation Business, Networks Business and Customer Business) streamlines the overall integration and coordination of the businesses and corporate areas with a view to achieving the objectives established at Group level.
The corporate areas serve as a support function that provides services to the Group's companies and businesses, both globally and locally. Thus, in addition to their structuring by geographic area, they are also coordinated by businesses. They help to implement the policies and overall strategy established at Group level (including procurement, risk, legal, financial, information systems, cybersecurity, among others), and ensure the correct consolidation of all financial and non-financial information at Group level.

The Group's Business Model is therefore geared towards maximising the operating efficiency of the various business units/geographies and ensuring the dissemination, implementation, and monitoring of the general strategy and basic management guidelines established for each of the businesses and geographies. This is achieved primarily through sharing information and best practices across the various Group companies, but without detriment to each company's decision-making autonomy and to the requirements imposed on their directors by law and by the Governance and Sustainability System.

As part of the Business Model, Iberdrola, S.A. fosters the creation and functioning of global business and corporate area committees, empowered to approve global guidelines and recommendations, propose improvement initiatives, promote the exchange of best practices, and support both the chief executive officer and the heads of the businesses in the performance of their duties, all without detriment to the corporate autonomy of the Group's companies.

3. ACCOUNTING POLICIES

3.a) Goodwill

Goodwill represents future economic benefits arising from other financial assets acquired in a business combination and which are not individually identified and separately recognised.

Goodwill arising from acquisitions of companies with a functional currency other than the euro is translated to euros at the exchange rate prevailing at the reporting date of the consolidated Statement of financial position.

Goodwill acquired on or after 1 January 2004 is measured at acquisition cost and that acquired earlier is measured at the carrying amount at 31 December 2003 in accordance with Spanish accounting standards in effect on that date, as provided in IFRS 1 — “First-time Adoption of International Financial Reporting Standards”.

Goodwill is not amortised. However, at the end of each reporting period it is reviewed for its recoverability and any impairment is written down (Note 3.i).
3.b) Other intangible assets

Concessions, patents, licenses, trademarks and others

The amounts recognised as concessions, patents, licenses, trademarks and others relate to the cost incurred in their acquisition net of accumulated amortisation and valuation changes due to impairment, if applicable.

The electricity distribution and transmission concessions held in UK by SCOTTISH POWER and those linked to the activities of AVANGRID, are not subject to any legal or other nature limits. Accordingly, as they are intangible assets with an indefinite useful life they are not amortised by the IBERDROLA Group, although they are assessed for indications of impairment each year, as described in Note 3.i.

Intangible assets under IFRIC 12

IFRIC 12 — “Service concession arrangements” affects public-private service concession arrangements that meet two conditions:

- the grantor controls or regulates which services the operator must provide with the infrastructure, to whom it must provide them and at what price; and
- the grantor controls any significant residual interest in the infrastructure at the end of the term of the arrangement.

Items of infrastructure within the scope of a service concession arrangement are not recognised as property, plant and equipment of the operator, because the operator does not have the right to control the use of the infrastructure.

If the operator performs more than one service (i.e. operation services and construction or upgrade services), the consideration received under the agreement for provision of services is recognised separately in the consolidated Income statement, in accordance with IFRS 15 “Revenues from Contracts with Customers”.

In the case of the IBERDROLA Group, IFRIC 12 affects only the electricity distribution activities carried out by the IBERDROLA Group in Brazil (Note 13). Remuneration for network construction and upgrade work carried out by the IBERDROLA Group in this country consisted, on the one hand, of an unconditional right to receive cash and, on the other hand, of the right to charge certain amounts to consumers. As a result, by applying IFRIC 12, two different assets were recognised for the two types of consideration received:

- A financial asset, which is recognised under “Other non-current financial assets” in the consolidated Statement of financial position (Note 15.b).
- An intangible asset, amortisable in the concession period, which is recognised under “Other intangible assets” in the consolidated Statement of financial position (Note 9).
Computer software

The acquisition and development costs incurred in relation to computer software are recorded with a charge to the “Other intangible assets” heading of the consolidated Statement of financial position. Maintenance costs of computer software are recorded with a charge to the consolidated Income statement for the year in which they are incurred.

Computer software is amortised on a straight-line basis over a period of between three and five years from the entry into service of each software asset.

Customer acquisition costs

The IBERDROLA Group recognises incremental costs from customer contracts related mainly to commissions for the implementation of purchase agreements as intangible assets which are amortised on a systematic basis according to the average expected life of contracts with customers that are associated with such costs.

Research and development expenditure

The IBERDROLA Group’s policy is to record research expenses in the consolidated Income statement for the period when they are incurred.

Development costs are recognised as an intangible asset in the consolidated Statement of financial position if the Group can identify them separately and show the technical viability of the asset, its intention and capacity to use or sell it, and how it will generate probable future economic benefits.

3.c) Investment property

Investment property is recognised at acquisition cost net of accumulated depreciation. It is depreciated on a straight-line basis, minus material residual value, over each asset’s estimated useful life, which ranges between 37.5 and 75 years based on the features of each asset concerned.

3.d) Property, plant and equipment

Items of property, plant and equipment are measured at acquisition or production cost less accumulated depreciation and value adjustments.

Acquisition cost includes, where applicable, the following:

1. Prior to the transition to IFRS (1 January 2004), the IBERDROLA Group updated certain Spanish assets under the “Property, plant and equipment” heading of the consolidated Statement of financial position as permitted by prevailing legislation, including Royal Decree-Law 7/1996, and considered the amount of these revaluations as part of the cost of the assets, in accordance with IFRS 1.
2. Finance expense related to external funding accrued exclusively during the construction period (Note 42) is calculated as follows:

- The interests accrued by specific-purpose sources of financing used to build certain assets are fully capitalised.

- The interests accrued by general-purpose borrowings are capitalised by applying the average effective interest rate on this financing to the average cumulative investment qualifying for capitalisation, after deducting the investment financed with specific-purpose borrowings, provided that it does not exceed the total finance expenses incurred in the year.

3. Personnel expenses related directly or indirectly to construction in progress (Note 39).

4. If the IBERDROLA Group is required to decommission its facilities or renovate the place where they are located, the current value of said costs is included in the carrying amount of assets for their present value, with a credit to the sub-heading “Provisions — Other provisions” of the consolidated Statement of financial position (Note 3.r).

   The IBERDROLA Group periodically checks its estimation of said current value, increasing or decreasing the asset value depending on the results of said estimation.

The IBERDROLA Group transfers property, plant and equipment in progress to property, plant and equipment in use at the end of the related trial period.

The costs of expansion or improvements leading to increased productivity, capacity or to a lengthening of the useful lives of the assets are capitalised. Replacements or renewals of complete items are recorded as additions to property, plant and equipment, and the items replaced are derecognised.

Income from the sale and the costs of items that arise during the period in which property, plant and equipment are brought into use are recognised in the consolidated Income statement (Note 2.a).

Gains or losses arising on the disposal of items of property, plant and equipment are calculated as the difference between the amount received on the sale and the carrying amount of the asset disposed of.

3.e) Depreciation of property, plant and equipment in use

Every year, the IBERDROLA Group reviews the useful life of its assets based on internal and external information sources.
The cost of property, plant and equipment in use is depreciated on a straight-line basis, less any material residual value, at annual rates based on the years of estimated useful life, which for most assets are as follows:

<table>
<thead>
<tr>
<th>Asset Type</th>
<th>Average years of estimated useful life</th>
</tr>
</thead>
<tbody>
<tr>
<td>Combined cycle power plants</td>
<td>40</td>

</tr>
</tbody>
</table>

As hydroelectric plants are operated under concessions (Note 13), civil engineering assets are depreciated over the life of the concession, while their electromechanical equipment is depreciated over either the concession period or 50 years, whichever is lower.

The important components of property, plant and equipment that maintain different useful lives are considered separately.

3.f) Lease contracts

The IBERDROLA Group has classified the right-of-use assets and the lease liabilities under the headings “Right-of-use assets”, “Non-current financial liabilities — Leases”, and “Current financial liabilities — Leases” respectively, in the consolidated Statement of financial position.

Right-of-use assets are initially recorded by cost, which includes:

- The initial valuation amount of the lease liability;
- Any lease payment made on or before the asset start date, minus incentives received;
- The initial direct costs incurred as a result of the lease; and
- An estimation of the costs that will be incurred by the lessee for the dismantling and restoration of assets.
After the initial recognition, right-of-use assets are recorded at cost minus accumulated depreciation and impairment losses. The depreciation of right-of-use assets is recorded under the “Amortisation, depreciation and provisions” heading of the consolidated Income statement for the useful life of the underlying asset or the lease term, whichever is shorter (Note 41). If the property is transferred to the lessee or it is practically certain that the lessee will exercise the purchase option, it will be depreciated over the useful life of the asset. Furthermore, for calculation loss due to right of use asset impairment, the Group applies impairment criteria on the value of non-current assets described in Note 3.i.

The right-of-use asset is later adjusted due to the impact of certain reassessments which affect lease liabilities.

The initial value of lease liabilities is calculated as the present value of future lease payments deducted at the implicit interest rate that may reliably be determined or, otherwise, at the incremental interest rate.

Lease payments include:

- Fixed or substantially fixed lease fees specified in the contract, minus any incentive to be received by the lessee;
- Variable fees dependent on an index or rate initially valued by applying the indices or rates existing at the beginning of the lease;
- The amounts that the lessee expects to pay for guarantees on the residual value of the underlying asset;
- The exercise price of the purchase option, if it is reasonably certain that the lessee will exercise said option; and
- The payments corresponding to extension options whose exercise is considered to be fairly certain or early lease cancellation fines if the lease period includes the early cancellation.

Contingent rents subject to the occurrence of a specific event and the variable fees dependent on revenues or the use of the underlying asset are recorded at the time when they are incurred under the “External services” heading of the consolidated Income statement, rather than forming part of the lease liability.

Subsequently, the lease liability is increased to show financial expenses and is reduced by the amounts paid. The discounting to present value is recorded under the “Financial expenses” heading of the consolidated Income statement (Note 43).

The lease liability is revalued when there is a change in indices or rates, in the estimated amounts to be paid for guarantees on the residual value, in those cases where options to extend are reasonably certain or in those cases where, with a reasonable degree of certainty, it is not considered that the cancellation options will be exercised.
The IBERDROLA Group has opted not to apply the exemption when recognising current leases (those with lease terms of 12 months or less). Contracts may include lease elements as well as non-lease elements. The IBERDROLA Group chooses not to separate such elements for accounting purposes and to recognise them as a single lease element.

3.g) Nuclear fuel

The IBERDROLA Group measures its nuclear fuel stocks on the basis of the costs actually incurred in acquiring and subsequently processing the fuel.

Nuclear fuel costs include the financial expenses accrued during construction, calculated as indicated in Note 3.d (Note 42).

The nuclear fuel consumed is recognised under the “Supplies” heading of the consolidated Income statement from when the fuel loaded into the reactor starts to be used, based on the cost of the fuel and the degree of burning in each reporting period.

3.h) Inventories

Energy resources

Energy resources are measured at acquisition cost, calculated using the average weighted price method, or net realisable value, if the latter is lower. No adjustments to the value of energy sources that are part of the production process are made if it is expected that the finished products into which they will be incorporated will be sold at above cost.

Real estate inventories

Real estate inventories are measured at cost of acquisition or production, which includes both the acquisition cost of the land and plot and the costs of urban planning and construction of the real estate developments incurred until the year end. These costs include project-related expenses, licenses, permits and certificates evidencing construction work filed at the pertinent registries.

The acquisition cost also includes finance expenses to the extent that such expenses relate to the period of town planning permits, urbanisation or construction up until the time at which the land or plot is ready for operation, calculated using the method set out in Note 3.d (Note 42).

Trade expenses are charged to the consolidated Income statement for the year in which they are incurred, except for those incremental costs required to obtain customer contracts.
The IBERDROLA Group periodically compares the cost of acquisition of real estate inventories with their net realisable value, recognising the necessary impairment losses with a charge to the consolidated Income statement when the latter is lower. If the circumstance leading to the impairment loss no longer exists, it is reversed, and the corresponding income is recognised, with the limit being the lower of cost and the new net realisable value of the inventories. This comparison is based on the value estimates made by external experts qualified for this purpose (mainly Knight Frank España, S.A.) in accordance with the Valuation Standards published by the Royal Institution of Chartered Surveyors (RICS) of Great Britain, in their January 2014 edition and confirmed in the 2020 edition.

For land, construction in progress and unsold units, net realisable value is the estimated selling price of an asset in the ordinary course of business, less the estimated costs to finish the production and the necessary costs to carry on with the sale of the element.

For other land and plots, value is determined using the residual method, where the costs of the proposed development are deducted from the gross value of the development, adding the profit margin which the developer would need taking into account the risk of the development. The key variables of the residual method are:

- **Expected income**: consists of the estimated price at which each of the development units may be sold, in accordance with a sales rate in accordance with estimates from independent experts.

- **The cost of the development**, including all disbursements to be made by the developer of the work depending on the type (e.g. government-sponsored or private single-family dwellings) and quality of the construction. In addition to the cost of the works, it includes the cost of projects and licenses (10%-12% of the physical construction project), legal fees (1%-1.5% of the material implementation project), marketing and promotional expenses (2%-4% of income) and unforeseen contingencies (3%).

- **Development time**: time required for the different planning, management and urban discipline stages, as well as expected construction and promotional periods.

- **The developer profit considered for each asset**, depending on the zoning status of the land, size and complexity of the development, ranging from 10% to 45% of total costs.

For land with licences, construction in progress and unsold units, the main difference with regard to unlicensed land is the developer's profit, which in this case is lower given the stage of completion of the work and the decrease in risk as the completion of construction nears.

**Emission allowances and renewable certificates**

Inventories of emission allowances and renewable energy certificates are measured at acquisition cost, calculated using the average weighted price method, or net realisable value, if the latter is lower. In the case of emission allowances and renewable energy certificates that are incorporated into the production process, no valuation adjustments are made if it is expected that the finished products into which they will be incorporated will be sold at above cost.
Emission allowances and energy renewable certificates acquired for the purpose of benefiting through fluctuations in their market price are measured at fair value with a credit or debit to the consolidated Income statements.

Emission allowances and renewable energy certificates are derecognised from the consolidated Statement of financial position when they are sold to third parties, have been delivered or expire. When the allowances are delivered, they are derecognised with a charge to the provision made when the CO₂ emissions were produced.

3.i) Impairment of non-financial assets

At least at the close of each financial year, the IBERDROLA Group reviews the value of its non-current assets to determine whether there is any indication that those assets have suffered an impairment loss. If any such indication exists, the recoverable amount of the asset is estimated in order to determine the extent of the impairment loss, if it is necessary. In the case of assets that do not generate cash inflows and which are largely independent from those generated by other assets, the IBERDROLA Group estimates the recoverable amount of the cash-generating unit to which they belong.

In the case of goodwill and other intangible assets which have not come into use or which have an indefinite useful life, the IBERDROLA Group performs the recoverability analysis systematically every year, except when there are indications of impairment at another time, in which case the recoverability analysis is performed at the same time.

For the purposes of this recoverability analysis, goodwill is allocated to the cash generating units or groups that benefit from the synergies arising from the business combination (Note 9).

The recoverable amount is the higher of fair value less costs to sell and value in use, which is the present value of estimated future cash flows. Assumptions used in the value in use calculation include discount rates, growth rates and expected changes in selling prices and direct costs. Discount rates reflect the value of money over time and the risks associated with each cash-generating unit. Growth rates and variations in prices and direct costs are based on contractual commitments already in place, publicly available information, as well as industry forecasts and the IBERDROLA Group's experience (Note 14).

If the recoverable amount of an asset is less than its carrying amount, the difference is registered as a charge to the “Amortisation, depreciation and provisions” heading of the consolidated Income statement.

The IBERDROLA Group distinguishes between impairment allowances and write-offs depending on whether the impairment is reversible or not reversible. A write-off involves a decrease in the carrying amount of assets, either because the impairments are considered definitive and non-reversible, or because it is stipulated that this is the case under the accounting standards, such as the case of goodwill, or when considering that the value of the asset is not going to be recovered for its use or disposal.
Impairment losses are due to the fact that future expected earnings to be obtained are less than the carrying amount. Impairment losses recognised for an asset are reversed with a credit under the “Amortisation, depreciation and provisions” heading of the consolidated Income statement when there is a change in the estimates concerning the recoverable amount of the asset, increasing the carrying amount of the asset, but so the increased carrying amount does not exceed the carrying amount that would have been determined if no impairment loss had been recognised.

3.j) Associates and joint ventures

Investments in associates and joint ventures are accounted for using the equity method. Under this method, investments are measured initially at acquisition cost, subsequently adjusted for changes to each company’s equity, taking into consideration the percentage of ownership and, if applicable, any valuation adjustments.

Some investments in associates and joint ventures which in the context of these consolidated Financial Statements are immaterial are recorded at acquisition cost within the "Non-current financial assets — Non-current equity investments" heading of the consolidated Statement of financial position.

The IBERDROLA Group regularly observes for signs of impairment at its associates and joint ventures by comparing the total carrying amount of the associate or joint venture, (including goodwill), to its recoverable amount. If the carrying amount exceeds the recoverable amount, the IBERDROLA Group recognises the related impairment with a debit to the consolidated Income statement within the “Results of equity-accounted investees — net of taxes" heading.

3.k) Joint arrangements

A joint venture is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets, and obligations for the liabilities, relating to the arrangement. These consolidated Financial Statements include the proportional part of the assets, liabilities, income and expenses of the joint arrangements in which the IBERDROLA Group takes part.

3.l) Financial instruments

Classification and measurement of financial assets

The IBERDROLA Group measures its current and non-current financial assets in accordance with the criteria described below:

1. **Assets at amortised cost**

   Financial assets that meet the following conditions are included in this category:
– The assets are held within a business model whose objective is to hold the assets to obtain the contractual cash flows, and

– The contractual terms give rise, on specified dates, to cash flows that are solely payments of principal and interest on the principal amount outstanding.

These assets are initially recognised at fair value plus transactions costs and are subsequently measured at amortised cost. Interest accrued is recognised in the consolidated income statement using the effective interest rate method. However, financial assets maturing in less than a year that do not have a contractual interest rate are measured both initially and subsequently at their nominal amount when the impact of not discounting cash flows is immaterial.

2. Financial assets at fair value through profit or loss

The IBERDROLA Group includes in this category derivative financial instruments that do not satisfy the conditions necessary for hedge accounting based on the requirements established for this purpose in IAS 9: “Financial Instruments” (Note 29).

Assets at fair value through profit or loss are initially recognised at fair value. The transaction costs directly attributable to purchase or issuing are recognised as an expense in the consolidated income statement insofar as they are incurred. The changes that occur in their fair value are allocated to the consolidated income statement for the period in the “Finance expense” and “Finance income” of the consolidated income statement, as may be applicable.

The IBERDROLA Group determines the most appropriate classification for each asset on acquisition and reviews the classification at each year end date.

Impairment of financial assets at amortised cost and contract assets

The IBERDROLA Group recognises valuation changes resulting from credit losses expected from financial assets and contract assets at amortised cost.

The IBERDROLA Group will apply the general model for calculation of expected loss on financial assets other contract assets and trade receivables without a significant financial component, for which the simplified model will be applied.

Under the general model, credit losses expected in the next 12 months are considered unless the credit risk of financial instruments has significantly increased from the initial recording. In that case, the expected credit losses over the life of the asset will be considered. The IBERDROLA Group recognises that the credit risk of a financial instrument has not significantly increased since its initial recognition if it is determined that at the reporting date it has a low credit risk.

Under the simplified approach, they qualify as expected credit losses over the life of the asset. The IBERDROLA Group has adopted the practical expedient whereby it calculates the expected credit loss on trade receivables by using a matrix of provisions based on its experience of historical credit losses adjusted for available forward-looking information.
Allocations and reversals of valuation adjustments due to the impairment of trade receivables and contract assets are recognised under the “Impairment losses, trade and contract assets” heading of the consolidated Income statement. Valuation changes and reversals of financial assets due to impairment of the other financial assets at amortised cost are recognised under the “Finance expense” heading of the consolidated Income statement (Note 43).

Derecognition of financial assets

Financial assets are derecognised when the rights to receive cash flows in relation thereto have extinguished or have been transferred or when the risks and profits are considered to have been substantially assigned arising from their ownership.

The derecognition of a financial asset implies the recognising in the consolidated Income statement the difference between its carrying amount and the sum of the consideration received less directly attributable transaction costs, including assets obtained or assets assumed and any deferred loss or gain in other comprehensive income.

Classification and measurement of financial liabilities

The IBERDROLA Group classifies all financial liabilities measured at amortised cost using the effective interest method, except for derivative financial instruments, which are recognised at fair value.

Derecognition of financial liabilities

Financial liabilities are derecognised when they are extinguished, i.e., when the obligation under the liability is discharged or cancelled or expires. Moreover, when a debt instrument between IBERDROLA and the counterparty is replaced by another, on substantial different terms, the original financial liability is derecognised and the new financial liability is recognised.

The IBERDROLA Group considers that the conditions are substantially different if the current value of the discounted cash flows under the new conditions, including any fee paid net of any fee received from the lender, and using the original effective interest rate for the discount, differs at least 10 per cent from the current discounted value of the cash flows that still remain from the original financial liability.

The difference between the carrying amount of the financial liability or of the part of it that has been deregistered and the paid consideration, including the attributable transaction costs, and in which any transferred asset different from the assumed cash or liability is also included, is recognised in the consolidated Income statement of the year in which it takes place.

When there is an exchange of debt instruments that do not have substantially different conditions, changed flows are deducted at the original interest rate, and every difference with the previous carrying amount is recognised in the consolidated Income statement. In addition, costs or commissions adjust the carrying amount of financial liabilities and are amortised using the amortised cost method during the rest of the life of the changed liability.
**Interests and dividends**

Interest income is accrued on a time proportional basis, by reference to the outstanding principal and the applicable effective interest rate, which is the rate that exactly discounts estimated future cash receipts through the expected life of the asset to that asset’s carrying amount.

Dividend income is recognised when the IBERDROLA Group companies are entitled to receive them.

**Contracts to buy or sell non-financial items**

The IBERDROLA Group performs a detailed analysis of all its contracts to buy or sell non-financial items to ensure they are classified correctly for accounting purposes.

As a general rule, those contracts that are settled for the net amount in cash or in another financial asset are classified as derivative financial instruments and are recognised and measured as described in this note, except for contracts entered into and held for the purpose of the receipt or delivery of a non-financial item in accordance with the IBERDROLA Group’s purchase, sale, or usage requirements.

Contracts for the sale and purchase of non-financial items to which IFRS 9: “Financial instruments” does not apply qualify as own-use contracts and are recognised as the IBERDROLA Group receives or delivers the rights or obligations originating thereunder.

**Derivative financial instruments and hedge accounting**

Financial derivatives are initially recognised at acquisition cost in the consolidated Statement of financial position and the required value adjustments are subsequently made to reflect their fair value at all times. Gains and losses arising from these changes are recognised in the consolidated Income statement, unless the derivative has been designated as a cash flow hedge or a hedge of a net investment in foreign countries.

At the start of the hedge, the hedging relationships are designed and formally documented, together with the risk management objective and strategy. It is also assessed at the beginning of the hedging relationship and on an ongoing basis, whether the relationship meets the effectiveness requirements prospectively.

The accounting treatment for hedging transactions is as follows:

1. **Fair value hedges:**

   Changes in the fair value of derivative financial instruments designated as hedges and changes in the fair value of the hedged item arising from the hedged risk are recognised with a charge or credit to the same heading in the consolidated Income statement.
2. **Cash flow hedges:**

The IBERDROLA Group recognises, under “Valuation adjustments”, gains or losses arising from the fair value measurement of the hedging instrument corresponding to the portion identified as an effective hedge. The hedging portion considered ineffective is recognised under the “Finance income” and “Finance expense” headings of the consolidated Income statement.

Accumulated losses or gains in “Valuation adjustments” are taken to the heading of the consolidated Income statement affected by the hedged item to the extent that it has an impact on the consolidated Income statement. If a hedge of a future transaction results in a non-financial asset or liability, this balance is taken into account when determining the initial value of the asset or liability generating the hedging transaction.

3. **Hedge of net investment in foreign operations:**

The IBERDROLA Group recognises the profit or loss proceeding from the measurement at fair value of the hedge instrument that corresponds to the part identified as effective hedge in “Translation differences”. The hedging portion considered ineffective is recognised under the “Finance income” and “Finance expense” headings of the consolidated Income statement.

---

**Specific accounting policies for hedging relationships directly affected by the IBOR reform applicable as of 1 January 2021 (Note 4):**

In order to assess whether there is an economic relationship between the hedging instrument and the hedged item at 31 December 2022, the IBERDROLA Group assumes that the reference variable interest rate has not been altered as a result of the IBOR reform.

The IBERDROLA Group will cease to apply the temporary exceptions mentioned above in the assessment of the economic relationship between the hedging instrument and the hedged item when there is no longer any uncertainty arising from the IBOR reform with respect to the term or amount of its interest settlements, or when the hedging relationship is discontinued.

**Discontinuation of hedge accounting**

The IBERDROLA Group prospectively discontinues the fair value hedge accounting in the cases in which the hedging instrument matures, is sold, let go of or exercised, the goal of the risk management has changed, there is no financial relation between the hedge element and the hedged item, the credit risk effect prevails over value changes, the hedge instrument matures or is liquidated or the underlying hedge ceases to exist.

When hedge accounting is discontinued, the cumulative amount at that date is recognised under the “Valuation adjustments” and “Translation differences” headings in cash flow hedges and net investment hedges, respectively, is retained under those headings until the hedged transaction occurs, at which time the gain or loss on the transaction will be adjusted. If a hedged transaction is no longer expected to occur, the gain or loss recognised under the aforementioned headings is transferred to the consolidated Income statements.
Embedded derivatives

Derivatives embedded in financial liabilities and transactions whose host contract falls outside the scope of IFRS 9: “Financial instruments” are recognised separately when the IBERDROLA Group considers that their risks and characteristics are not closely related to the host contract in which they are embedded, providing the entire contract is not measured at fair value recording the changes in that value through the consolidated Income statement.

Fair value of derivative financial instruments

The fair value of derivative financial instruments is calculated as follows (Note 17):

- The fair value of derivatives quoted on an organised market corresponds to their quoted price at year end.
- To measure derivatives not traded on an organised market, the IBERDROLA Group uses assumptions based on market conditions at year end. In particular,
  - the fair value of interest rate swaps is calculated as the value discounted at market interest rates of the interest rate swap contract spread;
  - in the case of currency futures, it is measured discounting the future cash flows calculated using the forward exchange rates at year end; and
  - the fair value of contracts to trade non-financial items falling under the scope of IFRS 9 is calculated on the basis of the best estimate of future price curves for the underlying non-financial items at the year end of the consolidated Financial Statements, using, wherever possible, prices established on futures markets.

These measurement models take into account the risks of the asset or liability, including the credit risk of both the counterparty (Credit Value Adjustment) and the entity itself (Debit Value Adjustment). The credit risk is calculated according to the following parameters:

- Exposure at default: the amount of the risk arising at the time of non-payment by a counterparty, taking into account any collateral or compensation arrangements connected to the transaction.
- Probability of default: the probability that a counterparty will breach its obligations to pay the principal and/or interest, depending mainly on the features of the counterparty and its credit rating.
- Loss given default: the estimated loss in the event of default.

Financial instrument offsetting principles

The financial assets and liabilities are offset and the corresponding net amount is shown in the Statement of financial position if the company currently has a legally enforceable right to set off the recognised amounts and the intention either to settle them on a net basis or to realise the assets and settle the liabilities simultaneously.
3.m) Treasury shares

At year end, the IBERDROLA Group’s treasury shares are included under the “Treasury shares” heading of the consolidated Statement of financial position and are measured at acquisition cost.

The gains and losses obtained on disposal of treasury shares are recognised under the “Other reserves” heading of the consolidated Statement of financial position.

3.n) Capital grants

This heading includes any non-repayable government grants for financing property, plant and equipment, including the grants received from the US Government in the form of Investment Tax Credits as a result of setting up wind power facilities.

All capital grants are taken to “Other operating income” in the consolidated Income statement as the subsidised facilities are depreciated.

3.o) Facilities transferred or financed by third parties

According to the regulation applicable to electricity distribution in the countries in which IBERDROLA operates, the Group occasionally receives cash payments from third parties to build electricity grid connection facilities or direct assignment of such facilities. Both the cash received and the fair value of the facilities received are credited to the “Facilities assigned or financed by third parties” heading of the consolidated Statement of financial position.

These amounts are subsequently recognised under the “Other operating income” heading of the consolidated Income statement as the facilities are depreciated.

3.p) Post-employment and other employee benefits

Contributions to defined contribution post-employment benefit plans are registered as an expense under “Personnel expenses” in the consolidated Income statement on an accrual basis.

In the case of the defined benefit plans, the IBERDROLA Group recognises the expenditure relating to these obligations on an accrual basis over the working life of the employees by commissioning the appropriate independent actuarial studies using the projected unit credit method to measure the obligation accrued at the year end. The provision recognised for this item represents the present value of the defined benefit obligation reduced by the fair value of the plan assets.
New measurements of net liabilities corresponding to defined provision commitments including positive or negative actuarial differences, the performance of the plan assets, excluding amounts included in the net interest on assets or liabilities and any changes impacting the limit of assets, are recognised under the “Other reserves” heading of the consolidated Statement of financial position.

If the fair value of the assets exceeds the present value of the obligation, the net asset is recognised in the consolidated Statement of financial position with the limit on the present value of future economic benefits to be received in the form of refunds from the plan or reductions in future contributions to the plan.

The IBERDROLA Group determines the net financial expense (income) related with its pension commitments by applying the discount rate used in its measurement of their value at the beginning of the period once considering the changes in the net pension commitments made during the period in terms of contributions and repayments made. The net interest and the amount corresponding to other expenses related with the commitments undertaken are recorded in the consolidated Income statement.

The IBERDROLA Group determines the discount rate with reference to the market yields at the end of the reporting period, corresponding to the bonds or business obligations of high credit quality (the IBERDROLA Group considers a rating equivalent to AA/Aa). In countries which do not have such a deep market for such bonds and obligations, the discount rate is determined with reference to Government bonds.

For the Eurozone, United Kingdom and the United States of America, there is a deep bond market with a sufficient period of maturity to cover all payments expected. For Eurozone countries, the depth of the bond or debenture market is evaluated at the level of the monetary union and not for the particular country. In the case of Brazil and Mexico, the discount rate has been determined taking into account the sovereign credit rating as there is no deep market for corporate bonds which meet the credit rating criteria indicated above.

The IBERDROLA Group applies a weighted average discount rate that reflects the estimated timing and amount of the defined benefit payments, and also the currency in which the benefits are to be paid.

The calculation methodology is mainly based on the following principles:

- The universe and spectrum of the outstanding bonds that meet the criteria of an AA/Aa rating is generated. The source of the information used is Bloomberg. The IBERDROLA Group has adopted the notional issuances that are higher than EUR 50 million or its equivalent in local currency as the selection criteria.

- Once the bonds' database is obtained, the result is screened and the bonds that show any deficiencies are eliminated.

- The sample is grouped based on the bonds' duration and the return on each duration and outstanding nominal amount of the issuance is shown.
– The benefit payment is calculated using a mathematical formula, i.e., the discrete minimum approximation of the quadratic function, resulting in a market return curve based on the duration. The market curve result will provide the discount factors for each future maturity date of the bonds.

For markets where the term of the corporate bonds or government bonds to have been issued does not match the term of the obligations, such maturities will be estimated by combining the sovereign benchmark rates together with the spreads of AA-rated corporate credit at liquid maturities. If there is no reference whatsoever to the term, the yield of the maximum existing term will be considered along with the slope derived from shorter maturities.

The discount rate reflects the time value of money and estimated schedule for the benefit payments. However, it does not reflect the actuarial, investment or credit risk or the risk of deviation in compliance with the actuarial assumptions.

3.q) Furlough schemes and other collective redundancy procedures

IBERDROLA recognises termination benefits when the Group can no longer remove the offer or when the expenses of restructuring are recognised from which the payment of severance payments arises, in the case that said recognition is made previously.

The payments related with restructuring processes are recognised when the IBERDROLA Group has an implicit obligation, i.e., at the time that there is a detailed formal plan to perform the restructuring (identifying, at least, the company activities involved, or part of them, the main locations affected, the location, function and approximate number of employees that will be paid for the termination of their contracts, the disbursements that will be made, and the dates on which the plan will be implemented) and a valid expectation has been expected amongst the affected personnel that the restructuring will be carried out, either because the plan has begun to be executed or because its main characteristics have been announced.

The IBERDROLA Group recognises the full amount of the expenditure relating to these plans when the obligation is incurred by performing the appropriate actuarial studies to calculate the present value of the actuarial obligation at year end. The resulting actuarial gains and losses in termination benefits are recognised in the consolidated Income statement.

3.r) Production facility closure costs

The IBERDROLA Group must meet the corresponding decommissioning costs for its production plants, including those arising from necessary tasks to prepare the land where they are located. Additionally, in accordance with the current legislation, the Group must perform certain tasks prior to the decommissioning of its nuclear plants, all of which are in Spain. Empresa Nacional de Residuos Radioactivos, S.A. (ENRESA) will be responsible for such work.
The estimated present value of these costs is capitalised with a credit to “Provisions — Other provisions” at the beginning of the useful life of the asset (Note 27).

This estimate is reviewed every year so that the provision reflects the present value of the full amount of the estimated future costs. The value of the asset is only adjusted for variances with respect to the initial estimate.

The IBERDROLA Group applies a risk-free rate to financially update the provision because the estimated future cash flows to satisfy the obligation reflect the specific risks of the corresponding liability. The risk-free rate used corresponds to the yield at the end of the year which is being reported, government bonds with enough depth and solvency, in the same currency and similar due date to the obligation.

Any change in the provision as a result of its discounting is recognised under the “Finance expense” heading of the consolidated Income statement.

3.s) Other provisions

The IBERDROLA Group recognises provisions to cover present obligations, whether these are legal or implied, which arise as a result of past events, provided that it is probable that an outflow of resources will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation (Note 27).

A provision is recognised when the liability or obligation arises, with a charge to the heading in the Income statement in accordance with the nature of the obligation, for the present value of the provision when the effect of discounting the value of the obligation to present value is material. The change in the provision due to its discounting each year is recognised under the “Finance expense” heading of the consolidated Income statement.

These provisions include those recorded to cover environmental damage, which were determined on the basis of a case-by-case analysis of the situation of the polluted assets and the cost of decontaminating them.

3.t) Current and non-current debt classification

In the consolidated Statement of financial position debts are classified by their maturity date at year end. Debts that are due within 12 months are classified as current items, while those due beyond 12 months as non-current items.

3.u) Recognition of revenue

Revenue from ordinary activities is recognised in such a manner that it represents the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services.
Given the nature of the Group’s electricity and gas marketing activities, the recognition of revenue is subject to a certain degree of estimation, which corresponds to the units supplied to customers between the date of the last meter reading and the end of the period (Note 5).

Income estimates are calculated on the basis of information on outstanding metering periods, historical trends, weighted average tariffs applicable to each of the customers, the volume of energy purchased by the group’s retail supply companies to meet demand and other data. The Company can use its experience it has developed over the years, plus it has sufficiently developed information systems to ensure the accuracy of the estimates recorded in the net sales accounts and compliance with the requirements of accounting regulations.

In the case of contracts with customers with several performance obligations, income is assigned to each performance obligation based on its individual sale price at the beginning of the contract. The individual sale price is estimated based on the observable price of sale of goods or services transactions when they are sold separately under similar circumstances to similar customers. If there are no observable prices in the market, the price is estimated using the most adequate method based on the information available.

When the IBERDROLA Group acts as principal, it recognises ordinary income in the gross amount of the consideration it expects to be entitled to in exchange for the goods or services transferred, whereas when it acts as agent, it recognises ordinary income in the amount of any payment or commission it expects to be entitled to in exchange for organising for a third party the supply of the goods or services.

The IBERDROLA Group presents contracts with customers in the consolidated Statement of financial position as a contract asset or liability depending on the relationship between the IBERDROLA Group’s performance and the payment settled by the customer.

- The contract with the customer is recognised as a contract liability when the customer has paid consideration before control of the goods or services has been transferred to the customer, so there is an obligation on IBERDROLA Group’s side to transfer the goods or services for which it has already received consideration.

- Contracts with customers are recognised as contract assets when the IBERDROLA Group has completed the arrangement by transferring the control of the goods or services to the customer before the customer has settled the consideration, so the IBERDROLA Group has a right to a consideration in exchange for the goods or services transferred to the customer.

Revenue from ordinary activities beyond the scope of IFRS 15 “Revenue from Contracts with Customers” related to lease contracts (Note 3.f) and financial hedging derivatives (Note 3.l) is recognised in accordance with applicable accounting rules.
3.v) Adjustments for market price deviations

Under the provisions of the regulatory framework applicable to the renewable energy generation facilities owned by the Group in Spain, these facilities receive certain incentives (specific remuneration regime) in accordance with the methodology established in Royal Decree 413/2014 of 6 June, which regulates the activity of electricity production from renewable energy sources, cogeneration and waste (the Royal Decree). The Royal Decree states that certain remuneration parameters will be updated in each regulatory half period.

The Royal Decree regulates the procedure to be followed if the real market prices for the different half-periods of the regulatory useful life of the asset are lower (positive adjustments) or higher (negative adjustments) than the prices estimated by the regulator at the beginning of the regulatory half-period that were used to determine the incentives to be received for the investments under the scope of the regulation.

Due to the high prices seen in the second half of 2021 and early 2022, Royal Decree 6/2022 of 29 March amended the 2020-2022 regulatory period by dividing it into two half-periods: 2020-21 and 2022. For the 2022 half-period, the price to be applied in 2022-2024 has been estimated as the average of OMIP futures during the period July to December 2021, resulting in prices for 2022, 2023 and 2024 of EUR 122/MWh, EUR 71/MWh and EUR 56/MWh, respectively. Likewise, Royal Decree 6/2022 amends Section 22.3 of Royal Decree 413/2014, of 6 June, so that the adjustment for deviations in the market price incorporates the real target coefficient of each technology when applying the annual average price of the daily and intraday market. This change has an impact on the adjustment for market price deviations in 2020 and 2021, influencing the remuneration parameters for 2022, and on the adjustment for price deviations in 2022, which also influences the remuneration parameters for the regulatory half-period starting on 1 January 2023. In this regard, Order TED/1232/2022 of 2 December established the remuneration parameters to be applied in 2022.

The accounting treatment of deviations in the market price applied by the Group, as adapted to the “Criteria for accounting for the ‘value of adjustments for deviations in the market price’, in accordance with Section 22 of Royal Decree 413/2014” published by the CNMV on 22 October 2021 is as follows:

- In general, each positive and negative market deviation is recognised in the Statement of financial position.
- The amount of the liabilities will be limited to the amount of the deviations from the price that would have allowed the minimum return guaranteed under the Royal Decree to be obtained.
- However, where an analysis of the qualitative and quantitative aspects corresponding to each of the facilities owned by the Group reveals that leaving the remuneration regime would not have significantly more adverse economic consequences than remaining there, then the general approach described above is not followed.
In relation to the Group's facilities that do not receive operating remuneration, at 31 December 2022, liabilities amounting to EUR 412 million were not recognised in respect of the negative price deviations established by the aforementioned Royal Decree that had occurred since 2014, since, according to the remuneration parameters of the Proposal for an Order of 28 December 2022 and the Group’s estimates at year-end, the effect of leaving the feed-in tariff regime, were this to occur, would not have a material adverse effect on the IBERDROLA Group’s financial statements.

Thus, there are currently no standard facilities not receiving operating remuneration that record the liabilities associated with price deviations.

When the asset reaches the end of its regulatory life, positive adjustments net of negative adjustments arising in the last regulatory half-period are recognised, based on their balance, in asset or liability accounts with a balancing entry in net revenue.

3.w) Transactions in foreign currency

Transactions carried out in currencies other than the functional currency of the group companies are recorded at the exchange rates prevailing at the transaction date.

The monetary assets and liabilities denominated in foreign currency have been converted to euros applying the existing rate at the close of the financial year, while the non-monetary ones measured at historical cost are converted applying the exchange rates applied on the date on which the transaction took place.

During the year, the differences arising between the exchange rates at which the transactions were recorded and those in force at the date on which the related proceeds are received or payments are made, are recorded, being charged to the “Finance expense” heading or credited to the “Finance income” heading, as appropriate, of the consolidated Income statement.

Those foreign currency transactions in which the IBERDROLA Group has decided to mitigate currency risk through the use of financial derivatives or other hedging instruments are recorded as described in Note 3.l.

3.x) Income tax

IBERDROLA files consolidated tax returns in two tax consolidation groups in Spain, one in the common territory and the other in the province of Biscay, with certain Group companies. Foreign companies are taxed according to the current legislation of their respective jurisdiction.

The expense or income for Corporate income tax includes both the current and deferred tax. The tax on the current or deferred earnings is recognised in the consolidated Income statement, unless arising from a transaction or economic event that has been recognised in the same year or in a different one, against net equity or from a business combination.
Current income tax assets or liabilities are measured at the amounts expected to be paid to or recovered from the tax authorities, using tax regulations and rates that are enacted or substantively enacted at the close date.

Prepaid and deferred taxes are accounted based on the differences between the carrying amount of the assets and liabilities and the tax base, using the tax rates objectively expected to be in force when the assets and liabilities are realised.

The Group recognises deferred tax liabilities in all cases except when:

- they arise from the initial recognition of the goodwill or from an asset or liability in a transaction that is not a business combination and which on the date of the transaction does not affect the accounting profit/(loss) or the tax base;
- which refer to timing differences relating to investments in subsidiaries, associated companies and joint businesses in which the Group can decide the point at which they are reversed, and when the reversal is unlikely to take place in the foreseeable future.

The Group recognises all deferred tax assets provided that:

- there are likely to be sufficient future tax gains for them to be offset or when, according to tax laws, deferred tax assets can be converted in the future into a payable to be made by the public authorities. However, the deferred tax assets that arise from the initial recognising of assets or liabilities in a transaction that is not a business combination and on the date of the transaction does not affect the accounting income or the tax base, are not recognised;
- which correspond to temporary differences related to investments in subsidiaries, associates and joint ventures inasmuch as the temporary differences will not be reinvested in a foreseeable future and future positive tax gains to offset the differences are not expected to be generated in the future.

Tax deductions to avoid double taxation and other tax credits, as well as tax relief earned as a result of economic events occurring in the year, are deducted from Income tax expense, unless there are doubts as to whether they can be realised.

Taxable income, tax loss carryforwards or deductions applied are calculated taking into account any uncertainties regarding the treatment of transactions for tax purposes. In those cases, in which the tax asset or liability exceeds the amount in the self-assessments, this is presented as current or not current on the consolidated Statement of financial position taking into account the expected recovery or settlement date, considering, where applicable, the amount of the corresponding past-due interest on the liability as they accrue in the Income statement. The IBERDROLA Group records the changes in facts and circumstances regarding tax uncertainties as a change in the estimate.
3.y) Final radioactive waste management costs

On 8 November 2003, the Royal Decree 1349/2003 was published regulating the activities of ENRESA and its financing. This Royal Decree grouped together the previous legislation regulating the activities that ENRESA carries out, as well as its financing, and repeals, inter alia, Royal Decree 1899/1984 of 1 August.

Pursuant to Royal Decree-Law 5/2005 and Law 24/2005, the costs of managing radioactive waste and spent fuel from nuclear plants, and for the decommissioning and closure of the plants attributable to their operation and incurred after 31 March 2005, will be financed by the owners of the nuclear plants in use.

On 7 May 2009, Royal Decree-Law 6/2009 was published, adopting various energy sector measures and approving the social tariff. The principal measures introduced are as follows:

- Necessary costs incurred in the management of radioactive waste and nuclear fuel at nuclear power stations which have definitively ceased to operate before the state-owned radioactive waste management company ENRESA is actually incorporated, which had not yet been done at the date of these consolidated Financial Statements, and all necessary costs incurred in decommissioning and closing these power stations, will be treated as diversification and capacity guarantee costs.

- Diversification and capacity guarantee costs shall also include amounts used to cover the cost of managing radioactive waste generated by research activities directly related to nuclear electricity generation and the costs deriving from the reprocessing of spent fuel sent overseas prior to the entry into force of the Electricity Industry Act 54/1997, as well as any other costs that may be indicated in the Royal Decree.

- Amounts used to register provisions to cover the costs incurred in managing radioactive waste and spent fuel generated at operational nuclear power stations after the establishment of ENRESA as well as decommissioning and closure costs will not be treated as supply diversification and security costs, so these will be financed by the owners of the nuclear power stations while they are operational, irrespective of the date on which they are generated.

- The balance of ENRESA's provision remaining after deduction of the amounts needed to cover the supply security and diversification costs will be used to cover costs not included in this category.

- To cover the costs associated with nuclear power plants in operation, the companies owning the stations must pay a charge directly proportional to the volume of energy generated at each plant in accordance with the methodology proposed for each plant.

Following a detailed analysis of the impact of Royal Decree-Law 6/2009, the IBERDROLA Group considers that the rate is the best estimate available of the accrued expenses originated under that Royal Decree-Law.
3.3) Earnings per share

Basic earnings per share are calculated by dividing the net profit for the year attributable to the Parent by the weighted average number of ordinary shares outstanding during the year, excluding the average number of shares of the Parent held by group companies (Notes 21 and 52).

Meanwhile, diluted earnings per share are calculated by dividing the net profit for the year attributable to the parent company by the weighted average number of ordinary shares outstanding during the year, adjusted by the weighted average number of ordinary shares that would have been outstanding assuming the conversion of all the potential ordinary shares into ordinary shares of IBERDROLA. For these purposes, it is considered that shares are converted at the beginning of the year or at the date of issue of the potential ordinary shares, if the latter were issued during the current period.

3.3a) Non-current assets held for sale and discontinued operations

If the carrying amount of a non-current asset (or a disposable group of assets) is recovered principally through its sale rather than through its continued use, the IBERDROLA Group classifies it as held for sale and values it at the lower of its carrying amount and its fair value less the costs of sale.

Impairment losses relating to disposal groups are first allocated to goodwill and then to other assets and liabilities on a pro rata basis. No valuation adjustments are recognised that could affect inventories, financial assets, deferred tax assets and assets related to employee commitments. These assets are valued pursuant to the principles set out in the preceding paragraphs. Losses recognised at the time of initial classification under this heading and gains and/or losses arising thereafter are recognised in the consolidated Income statement.

The items classified as non-current kept for their disposal are not amortised.

A discontinued operation is a component of the entity that either has been sold or disposed of by other means, or is classified as held for sale and:

- represents a business line or geographical area that is significant and can be considered separately from the rest;
- is part of a single and coordinated plan to sell or dispose by other means a business line or geographical area that can be considered separately from the rest; or
- is a subsidiary acquired exclusively with a view to resale.

If discontinued operations are deemed to exist, the IBERDROLA Group recognises a single heading in the consolidated Income statement comprising the sum of:

- profit or loss after tax from discontinued operations, and
profit or loss after tax recognised by measurement at fair value less costs of sale, or sale or disposal by other means of the assets or disposable groups of assets that constitute the discontinued operation.

3.ab) Consolidated Statement of cash flows

In the consolidated Statements of cash flow, which were prepared using the indirect method, the following terms are considered:

- Operating activities: the typical activities of the group companies, as well as other activities that are not investing or financing activities.
- Investing activities: the acquisition, sale or disposal by other means of non-current assets and other investments not included in cash and cash equivalents.
- Financing activities: activities that result in changes in the size and composition of the equity and liabilities of the company that are not operating activities.

3.ac) Share-based employee compensation

The delivery of IBERDROLA shares to employees as compensation for their services is recognised under the “Personnel expenses” heading of the consolidated Income statement as the employees perform the remunerated services, with a credit to equity under “Equity — Other reserves” of the consolidated Statement of financial position at the fair value of the equity instruments on the delivery date, defined as the date the IBERDROLA Group and its employees reach an agreement establishing the terms of the share delivery.

Fair value is determined in reference to the market value of shares at the award date deducting estimated dividends to which employees are not entitled, during the vesting period. Market conditions and other factors that have no effect on vesting are taken into consideration on the date of the initial valuation and are not subject to subsequent adjustment. The rest of the conditions are considered adjusting the number of equity instruments included in the determination of the transaction amount, so that finally, the amount recognised for the services received, is based on the number of equity instruments that will prospectively be consolidated.

If remuneration based on equity instruments is paid in cash, the amount booked as “Personnel expenses” in the consolidated Income statement is credited to “Non-current financial liabilities — Other non-current financial liabilities” or “Current financial liabilities — Other current financial liabilities” on the liabilities side of the consolidated Statement of financial position, as appropriate. The fair value of the cash-settled compensation is remeasured at each reporting date.

Equity instruments retained to meet the employee’s tax obligations do not alter the plan’s classification as equity-settled.
4. FINANCING AND FINANCIAL RISK POLICY

The IBERDROLA Group is exposed to various financial market risks inherent to the different countries, industries and markets in which it operates and to the businesses it carries out. Were they to materialise, these risks could prevent the Group from accomplishing its objectives and successfully pursuing its strategies. Section 4 of the consolidated Management report contains additional information on the Group’s risks.

In particular, the Financing and Financial Risk Policy, the Corporate Market Risk Policy and the Corporate Credit Risk Policy of the IBERDROLA Group approved by the Board of Directors identify the risk factors described below. The IBERDROLA Group has an organisation and systems that enable it to identify, measure and control the financial risks to which it is exposed.

**Interest rate risk**

The IBERDROLA Group is exposed with regards to its financial liabilities to the risk of fluctuations in interest rates affecting cash flows and fair value.

In order to adequately manage and limit this risk, every year the IBERDROLA Group determines the target structure for debt between fixed and floating interest rate. Once the target structure has been defined, the Group dynamically manages the actions to be taken throughout the year: new sources of financing at a fixed or floating rate and/or the use of interest rate derivatives, whether to set the interest rate (or limit its variability) for variable rate debt or to change debt from fixed rate to floating rate. Derivatives may also be used to establish the cost of future debt issues, provided they are highly probable in accordance with the budget or the strategic plan in force.

Bank borrowings, bonds and other marketable securities arranged at floating rates and cash placements of the IBERDROLA Group are largely pegged to market rates (mainly Euribor, SONIA, Libor-dollar, SOFR and the IPCA CDI for the debt of the Brazilian subsidiaries).

*Management of the IBOR (Interbank offered rates) reform and of the financial risks arising as a result of the reform*

At 31 December 2022 and 2021, the nominal amount of hedging instruments indexed to IBOR indices, with the exception of Euribor, with a maturity date after 31 December 2022, is as follows:

<table>
<thead>
<tr>
<th>Millions in currency</th>
<th>Currency</th>
<th>Notional value at</th>
<th>Notional value at</th>
</tr>
</thead>
<tbody>
<tr>
<td>Libor-pound indexed interest rate swap</td>
<td>GBP</td>
<td>—</td>
<td>550</td>
</tr>
<tr>
<td>Libor-USD indexed interest rate swap</td>
<td>USD</td>
<td>1,706</td>
<td>1,706</td>
</tr>
<tr>
<td>Cross currency swap indexed to Libor-dollar</td>
<td>USD</td>
<td>181</td>
<td>212</td>
</tr>
<tr>
<td>Cross currency swap indexed to Libor-pound sterling</td>
<td>GBP</td>
<td>—</td>
<td>201</td>
</tr>
</tbody>
</table>
At 31 December 2022 and 31 December 2021, the nominal amount of bank borrowings, bonds and other marketable securities indexed to IBOR indices, with the exception of Euribor, with a maturity date after 31 December 2022, is as follows:

<table>
<thead>
<tr>
<th></th>
<th>Currency</th>
<th>Notional value at 31 December 2022</th>
<th>Notional value at 31 December 2021</th>
</tr>
</thead>
<tbody>
<tr>
<td>Libor-pound sterling bank loans</td>
<td>GBP</td>
<td>—</td>
<td>—</td>
</tr>
<tr>
<td>Libor-dollar bank loans</td>
<td>USD</td>
<td>765</td>
<td>1,200</td>
</tr>
</tbody>
</table>

As at 31 December 2022, the Group had completed, or was in the process of completing, the process of implementing appropriate alternative clauses for all of the reported Libor-dollar indexed exposures. These clauses automatically change the instrument’s Libor-dollar benchmark to SOFR or, as the case may be, TERM SOFR when Libor-dollar ceases to be used.

If the authorities make any progress on the IBOR indices, the IBERDROLA Group will make the appropriate contractual amendments so as to include the new replacement reference interest rate in its financing contracts.

**Currency risk**

IBERDROLA Group is exposed to currency exchange rate variations used in the different financing and operating transactions compared to the operating currencies used by the different group companies. Said operating currencies are mainly the Euro, the US dollar, Pound sterling and the Brazilian Real.

IBERDROLA Group is also exposed to currency risks as a result of net investments in foreign companies (mainly Scottish Power, Avangrid, Iberdrola México and Neoenergia) arising from fluctuations in cash exchange rate differences of operating non-euro currencies. Currency exchange variations imply a risk affecting the valuation of net assets and the translation of profit, possibly impacting IBERDROLA Group’s equity situation.

The IBERDROLA Group mitigates currency risks by ensuring that all its economic flows are carried out in the currency of each Group company, maintaining an adequate percentage of debt in foreign currency and/or through derivatives.

**Commodity price risk**

The IBERDROLA Group’s activities require the acquisition and sale of commodities (natural gas, coal, fuel oil, gas oil, emission allowances, etc.), whose price is subject to the volatility of international markets (global and regional) where those commodities are traded.

To reduce uncertainty, mainly linked to expected margin of scheduled IBERDROLA Group transactions, as a result of the volatility of said markets, the Group subscribes financial derivatives to establish the cost of own generation and purchase of energy associated to the expected sales of gas and electricity to customers.

**Derivatives for risk management purposes**

Generally speaking, the purpose of contractual derivatives is limited to hedging.
In accordance with the risk management policies drawn up by the IBERDROLA Group, the critical terms of the hedging instruments, i.e. the derivatives arranged to mitigate the aforementioned interest rate, exchange rate and commodity price risks, are established in terms equivalent to those of the hedged item, among others:

- The notional value of the hedging instrument is equal to or less than that of the hedged item.
- The underlying currency of the hedging instrument is the same as that of the hedged item.
- The term of the hedging instrument is equal to or less than that of the hedged item.
- The variable benchmark interest rate applicable to the hedging instrument is the same as that of the hedged transaction, if appropriate.
- The interest frequency of the hedging instrument is the same as that of the hedged item.

Derivatives arranged for interest rate hedges, exchange rate hedges and commodity hedges are described in Note 29.

**Liquidity risk**

Exposure to adverse situations in the debt or capital markets or the IBERDROLA Group’s economic and financial situation can hinder or prevent the IBERDROLA Group from obtaining the financing required to properly carry out its business activities.

The IBERDROLA Group’s liquidity policy is designed to ensure that it can meet its payment obligations without having to rely on financing under unfavourable terms. For this purpose, various management metrics are used, such as the arrangement of committed credit facilities of sufficient amount, term and flexibility, diversification of the hedging of financing needs through access to different markets and geographical areas, and diversification of the maturities of the debt issued.

Looking ahead to 2023, the IBERDROLA Group expects to cover is planned ordinary investments with cash on hand and with the cash flow generated from its operations and access to the interbank financial markets, capital markets and supranational lenders (such as the EIB, Development Banks and Export Credit Agencies – ECAs), even though the Group has sufficient credit facilities and loans in place with which to cover these investments.

At 31 December 2022 and 2021, the IBERDROLA Group had undrawn loans and credit facilities totalling EUR 17,754 and 15,360 million, respectively. Additionally at 31 December 2022 there were current cash deposits that, due to their contractual conditions, the IBERDROLA Group includes in its liquidity position as of that date. The following table provides a breakdown by maturity of the liquidity position at 31 December 2022 and 2021, based on the balance of the “Cash and cash equivalents” heading of the consolidated Statement of financial position and current financial assets (between three and 12 months).
Credit risk

The IBERDROLA Group is exposed to the credit risk arising from the possibility that counterparties (customers, financial institutions, partners, insurers, etc.) might fail to comply with contractual obligations.

Risk is properly managed and limited, depending on the type of transaction and the creditworthiness of counterparties. In particular, there is a Corporate Credit Risk Policy setting the framework and action principles for proper risk management, which are further developed at business and country level (admission criteria, approval flows, authority levels, rating tools, exposure measurement methodologies, etc.) through procedures.

Below is a breakdown by country of balances at 31 December 2022 and 2021 of financial assets and contract assets:

</tr>
</tbody>
</table>

Balances of “Other current and non-current financial assets” and “Non-current trade and other receivables” correspond mainly to concession agreements signed with Brazilian public administrations (Note 13) and receivables related to regulated activities in Spain.

With regard to credit risk on trade receivables from electricity and gas retail supply activity in the liberalised market, the historical cost of defaults has remained relatively low, at close to 1% of total turnover of this activity worldwide.
With regard to the “Cash and cash equivalents” heading of the consolidated Statement of financial position, the average credit rating of the counterparties is BBB+, according to the scale used by Standard and Poor’s.

**Sensitivity analysis**

The following sensitivity analyses show, for each type of risk (without reflecting the interdependence among risk variables), how income for the year and equity might be affected by reasonably possible changes in each risk variable at 31 December 2022 and 2021.

- **Interest rates:**

To calculate the sensitivity of consolidated profit or loss to changes in interest rates, an increase or decrease of 50 basis points (equally in all currencies) is applied to the average balance of net floating rate debt, after taking into account hedges with derivatives. To calculate the sensitivity of equity, an increase or decrease of 50 basis points (equally across all currencies) is applied to the fair value of the outstanding cash flow hedges at year-end, the change in fair value of which is recognised in equity.

The sensitivity of consolidated profit and equity to interest rate fluctuations is as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>Increase/decrease in interest rate (basis points)</th>
<th>Impact on profit before tax Income/(Expense)</th>
<th>Direct impact on equity before tax</th>
<th>Impact on equity before tax</th>
</tr>
</thead>
<tbody>
<tr>
<td>2022</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>50</td>
<td>(78)</td>
<td>202</td>
<td>124</td>
</tr>
<tr>
<td></td>
<td>(50)</td>
<td>78</td>
<td>(202)</td>
<td>(124)</td>
</tr>
<tr>
<td>2021</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>(50)</td>
<td>55</td>
<td>(174)</td>
<td>(119)</td>
</tr>
</tbody>
</table>

- **Exchange rates:**

To calculate the sensitivity of consolidated profit to variations in exchange rates, a depreciation or appreciation of 5% is applied mainly on the profit of foreign subsidiary companies whose operating currency is different to the Euro (net of economic hedges arranged), given that the risk originated from other transactions in foreign currency, either due to financing or business operations, is covered by exchange rate hedges. The sensitivity of equity to exchange rates is calculated applying an appreciation or depreciation of 5% on net translation differences and on cash flow derivative hedges whose variation in fair value is recognised in equity.

The sensitivity of consolidated profit and equity of the IBERDROLA Group to changes in the dollar/euro, pound sterling/euro and Brazilian real/euro exchange rate is as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>Change in the dollar/euro exchange rate</th>
<th>Impact on profit before tax Income/(Expense)</th>
<th>Direct impact on equity before tax</th>
<th>Impact on equity before tax</th>
</tr>
</thead>
<tbody>
<tr>
<td>2022</td>
<td>Depreciation of 5%</td>
<td>(12)</td>
<td>(1,122)</td>
<td>(1,134)</td>
</tr>
<tr>
<td></td>
<td>Appreciation of 5%</td>
<td>4</td>
<td>1,241</td>
<td>1,245</td>
</tr>
<tr>
<td>2021</td>
<td>Depreciation of 5%</td>
<td>(13)</td>
<td>(1,023)</td>
<td>(1,036)</td>

5. USE OF ACCOUNTING ESTIMATES

The most significant estimates made by the IBERDROLA Group in these consolidated Financial Statements are as follows:

Climate change:

The IBERDROLA Group’s strategy takes into account the Paris Agreement objectives of limiting the global temperature increase to 2°C and of achieving climate neutrality by 2050.
The objectives of the Paris Agreement (Note 6) have been taken into account in drawing up the consolidated Financial Statements for 2022 and 2021. The effect of the commitments assumed by the Group has been considered when preparing the statements and estimating the useful lives of assets and the costs of closing and decommissioning electrical power plants and when analysing the impairment of non-financial assets.

- **Unbilled power supplied:**

  The revenue figure for each year includes an estimate of the power supplied to customers of liberalised markets but not yet billed because it had not been measured at year-end for reasons relating to the regular meter-reading period (Note 3.u). Fully depreciated property, plant and equipment still in use at 31 December 2022 and 2021 amounted to EUR 3,127 and 2,662 million, respectively. This amount is included under “Current trade and other receivables” in the consolidated Statements of financial position at 31 December 2022 and 2021 (Note 16).

- **Settlements relating to regulated activities in Spain:**

  Revenue for each year includes an estimate of the income pending collection derived from the application of the methodology set out in the remuneration model in force for the distribution activity, which establishes that facilities commissioned in year “n” begin to be remunerated from year “n+2”. (Note 37).

- **Provisions for contingencies and expenses:**

  As indicated in Note 3.s, the IBERDROLA Group recognises provisions to cover present obligations arising from past events. For this purpose, it must assess the outcome of certain of legal or other nature procedures that are ongoing at the date of authorisation for issue of these consolidated Financial Statements based on the best information available.

- **Useful lives:**

  The IBERDROLA Group’s property, plant and equipment is used over very prolonged periods of time.

  The Group estimates the useful lives for accounting purposes (Note 3.e) based on each asset’s technical characteristics, the period over which it is expected to generate economic benefits and applicable legislation in each case.

- **Costs incurred in closing down and decommissioning electrical power facilities:**

  The IBERDROLA Group periodically revises the estimates made concerning the costs to be incurred in the dismantling of its facilities.
Provision for pensions and similar commitments and restructuring plans:

At each year end, the IBERDROLA Group estimates the current actuarial provision required to cover obligations relating to restructuring plans, pensions and other similar obligations to its employees. This process involves an independent valuation of the obligations and assets. In calculating these values, the IBERDROLA Group relies on advice from independent actuaries and expert financial appraisers (Notes 3.p, 3.q and 26).

When valuing obligations, the independent expert proceeds as follows:

- Estimation of accrued liability, total cost for the year and payments in future years.
- Analysis of actuarial gains and losses, of the resulting surplus or deficit and sensitivity to relevant assumptions.

When valuing assets, the independent expert proceeds as follows:

- Identification of the managing entities, depositories of the pension funds and Managed Accounts and the degree of aptitude of each manager and Managed Account
- Operational Due Diligence of the managing entities: financial strength, solvency, organisational structure, resources, processes run by the Risk Control and Compliance functions, best execution policy, order placement, quality and reputation, etc.
- Quantitative and qualitative analysis of each of the Managed Accounts in which the financial investments are materialised and classification, in terms of liquidity, of each asset and/or investment vehicle.

Fair value of investment property:

The IBERDROLA Group appraises its investment property each year.

Impairment of assets:

As described in Notes 3.i and 14, the IBERDROLA Group, in accordance with the applicable accounting criteria, performs an impairment test on those cash-generating units that so require on an annual basis. Specific tests are also conducted if indications of impairment are detected. These impairment tests require estimating the future cash flows of the businesses and the most appropriate discount rate in each case. The IBERDROLA Group believes its estimates in this respect are appropriate and consistent with the current economic climate and the commitments assumed under the Paris Agreement (Note 6) and reflect its investment plans and the best available estimate of its future expense and income. It is also confident that its discount rates adequately reflect the risks to which each cash-generating unit is exposed.
Determining the term of a lease:

In the event that a significant event or a significant change in circumstances occurs that may affect the term, the IBERDROLA Group reviews the valuations made in the determination of the lease term. Renewal or termination options are only included in the determination of the lease term if it is reasonably certain that the contract will be extended or will not be cancelled. In the event that a significant event or a significant change in circumstances occurs that may affect the term, the IBERDROLA Group reviews the valuations made in the determination of the lease term.

6. CLIMATE CHANGE AND THE PARIS AGREEMENT

IBERDROLA embarked upon a profound transformation more than 20 years ago, when it pledged its support for a sustainable, safe and competitive energy model that would enable it to fight climate change. This has been the main driver of its profitable growth strategy, which has led it to invest more than EUR 140,000 million over the last two decades with the ultimate aim of achieving a decarbonised energy model. The Group is now in an excellent position from which to continue to anticipate and manage the risks and harness the opportunities that this energy transition offers thanks to its leadership in renewable energies, smart grids and storage, as well as its firm commitment to digitalisation.

In its commitment to the Paris Agreement and the energy transition, IBERDROLA’s Climate Action Plan sets out an ambitious roadmap with the aspiration of achieving carbon neutrality for Scope 1 and 2 carbon equivalent emissions by 2030 and aims to achieve zero net CO₂ equivalent emissions for all scopes, including Scope 3, by 2040. To achieve this aspirational goal, levers and associated actions are also being defined which, in turn, will contribute to the decarbonisation of the economy as a whole, as well as the values, tools and indicators for the achievement thereof.

One of the levers for achieving this aspirational commitment to reduce emissions, is that IBERDROLA will continue to promote and lead a business model and investment plan that is fully integrated into a decarbonised future. The company is moving forward with its EUR 47,000 million investment plan until 2025 and consolidating its business model, based on more renewable energies, more networks, increased storage and a wider range of smart solutions for customers.

6.a) Energy scenario

In preparing the consolidated Financial Statements for financial year 2022, the directors have taken into account the strategic plan presented to the markets in 2022, which provides the framework of the IBERDROLA Group’s strategy and business model and is fully aligned with the Paris Agreement and the 2030 Agenda in the fight against climate change.

The IBERDROLA Group’s projections are consistent with the Paris goals, as described further on.
Shown below is a comparison of the IBERDROLA Group's long-term scenario consistent with the International Energy Agency - Sustainable Development Scenario (IEA SDS), aligned with the Paris agreement, in force during the preparatory work for Capital Markets Day (held on 9 November 2022). In the last week of October 2022, the International Energy Agency published the World Energy Outlook (WEO 2022) and it has subsequently been confirmed, in the context of the work needed to comply with the recommendations of the Task Force on Climate Disclosure (TCFD), that the central scenario is the equivalent of the WEO2022 Announced Pledges Scenario (APS) projections.

1. Europe

Penetration of renewables

– IEA SDS assumes a renewable penetration (RES) of 66% in Europe by 2030, increasing to 82-83% by 2040 and 85-86% by 2050.

– IBERDROLA assumes 68% for 2030, reaching 81% for 2040 and 87% for 2050, assumptions consistent with IEA SDS.

  – This assumption reflects updated policies, in particular those announced during the war scenario: 80% RES by 2030 in Germany, new nuclear capacity in France beyond 2035, 50 GW in offshore wind in the United Kingdom by 2030 or 21 GW in offshore wind by 2030 in the Netherlands, to name a few.

  – Targets that are considered overly ambitious or unrealistic are set back by a few years.

Electrification of other sectors (new demand)

– IEA SDS assumes energy demand growth of 2.0% to 2.1% (Compound Annual Growth Rate, CAGR 2020-2050), while IEA SPS (Stated Policies Scenario, STEPS) assumes 0.9% to 1.2%.

– IBERDROLA assumes a compound annual growth rate (CAGR) of 1.7% until 2050, reflecting the impact of electrification and decarbonisation in other sectors (electric vehicles and electrolysers), representing 25-30% of energy demand by 2050.

Commodities

– Gas price

  – IEA SPS (Stated Policies Scenario) assumes growth in worldwide gas demand of 0.8% (CAGR 2020-2050), with new LNG plants required and the gas price reflecting a total cost of HH 3.6 – 4.3 $2020/mmBtu (2030-2040), which translates into 7.7 - 8.3 $2020/mmBtu.

  – By contrast, IEA SDS considers that through decarbonisation, global gas demand will decline by 1.6% (CAGR 2020-2050), there is global LNG overcapacity and the gas price remains stable at a level that slightly exceeds the variable costs of the US LNG chain: from HH 1.9-2.0 $2020/mmBtu which translates into 4.2 - 4.5 $2020/mmBtu in Europe.
SDS can be overly aggressive and, given the current gas crisis scenario: IBERDROLA does not fully assume the SDS gas prices, but partially reflects the risk of a declining gas demand scenario.

IBERDROLA assumes that prices will adopt a downward trend, from values that amortise new LNG investments in the United States to values that do not fully cover a new investment: HH at 3 $2022/mmBtu translates into 7 - 6.2 $2022/mmBtu in Europe.

It is not unlikely that the next SDS scenario will raise gas prices (WEO 2022) positioning IBERDROLA much closer to SDS than SPS.

CO₂ price

IEA SPS assumes 65, 75, 90 $2020/tCO₂ for 2030, 2040 and 2050 respectively while IEA SDS doubles it to 120, 170, 200 $2020/tCO₂.

IBERDROLA assumes an average for 2025-2050 of 76.83 $2020/tCO₂, assuming a long-term USD/EUR exchange rate of 1.1-1.2. This forecast is well above current market prices (average 95-100 €/tCO₂ nominal in 2025-2050 compared to 70-80 €/tCO₂ market price), but does not fully reflect IEA SDS values. This is because IBERDROLA assumes that there is a high regulatory risk:

- Most reductions can stem from other regulatory measures rather than simply the carbon price signal. Examples include incentives for renewables, new nuclear, new CCS or H2.
- Regulators often intervene when prices exceed certain thresholds, and ETS already has the tools to intervene in the price. Therefore, IBERDROLA considers it highly unlikely that prices will reach the IEA SDS values (noting that 200 $2020/tCO₂ by 2050 is a nominal price of ~375 $/tCO₂).

2. United States

IBERDROLA assumes the Wood Mac scenario (June 2022), which is consistent with the IEA SDS scenario:

- Wood Mac
  - Share of renewables to reach 80% by 2050
  - Coal virtually phased out by 2035-2040

- IEA SDS
  - Share of renewables to reach 84% by 2050
  - Coal insignificant by 2035
3. Non-Europe

IEA SDS does not provide country-by-country details for benchmarking as in Europe.

In any case, IBERDROLA’S assumptions are consistent with the regulators’ latest policies and planning documents, which tend to show growing ambitions for renewables:

- **Australia**: policies at federal and state level
  - Federal: 82% RES by 2030.
  - New South Wales: +12 GW of wind and photovoltaic by 2030.
  - Queensland: 80% RES by 2035.
  - Victoria: 9 GW offshore by 2040.

- **Brazil**: Ten-Year Energy Expansion Plan (PDE 2031).
  Benchmark scenario (2031): high penetration of renewables with only 7% gas share (67 TWh).

- **Mexico**: National Electricity System Development Programme (PRODESEN 2031).
  Combined cycle production in the range of 225-250 TWh in the period 2025-2035 (from ~ 200 TWh in 2022).

6.b) Strategic vision

IBERDROLA’S strategic vision for the coming years fits within the energy scenario described in the preceding section.

The IBERDROLA Group foresees investments of EUR 47,000 million for the 2023-2025 period, as announced at the Capital Markets Day presentation.

The growth of this Plan is based on organic investments in all markets and the PNM Resources transaction, to which EUR 11,000 million will be allocated.

Specifically, of the EUR 47,000 million investment, 80% will go to A-rated countries with stable regulatory frameworks and ambitious electrification targets. By country, the group will allocate 47% of its investments to the United States -including organic investments and the integration of PNM Resources-, representing the main market for expansion over the next three years. In second place is the United Kingdom with 16%. In addition, IBERDROLA is pursuing geographic diversification through additional focus on countries such as Germany, France and Australia, to which it will allocate 13% of the total investment. In Spain, investments will exceed EUR 6,000 million in three years, 13% of the total, in line with the average of recent years.
Growth will be centred on electricity grids and selective investments in renewables:

- A total of EUR 27,000 million will be allocated to networks, to reach an asset base of EUR 56,000 million for 2025.
- In renewables, investments will reach EUR 17,000 million, with a total capacity of 52,000 MW at the end of the period, increasing the current capacity by 12,100 MW:
  - 3,100 MW onshore wind,
  - 6,300 MW photovoltaic,
  - 1,800 MW offshore,
  - 700 MW in batteries, and
  - 200 MW of hydropower.

The outlook for 2030, driven by growth in all markets and accelerating electrification, could reach EUR 65-75,000 million in investments in the 2026-30 period to exceed 100 GW of installed capacity (more than 80% renewable) and EUR 65,000 million in network assets.

6.c) Preparation of the Financial Statements

In preparing these Financial Statements, the impact of climate change has been considered in a number of key estimates, including:

- estimated useful lives of assets, their residual values and decommissioning provisions; and
- impairment tests.

Useful lives:

As described in Note 3.e) “Depreciation of property, plant and equipment in use”, the IBERDROLA Group reviews the useful lives of its assets on an annual basis. The IBERDROLA Group did not amend the useful life of its assets in financial year 2022, insofar as, at the date of preparation of these financial statements, the roadmap for achieving carbon neutrality for the carbon equivalent emissions of scopes 1 and 2 by 2030 has not been drawn up.

Emissions from the production mix will be reduced, either by investing in new renewables, or by offsetting any residual emissions.

The above-mentioned offsetting could take the form of:

- indirect offsetting through the carbon credit markets provided for in the Paris Agreement or regulated or voluntary markets. In this regard, the IBERDROLA Group will promote the planting of 20 million trees by 2030 to obtain sufficient carbon credits to neutralise these residual emissions.
Moreover, the long-term ambition to achieve the carbon neutral target in 2040 (Scopes 1, 2 and 3) depends as much on the measures taken by the group as on the decisions of third parties. These measures could affect not only the Group’s thermal generation business, mainly cogeneration and combined cycle plants, but also its gas transmission, distribution and retail supply activities.

The IBERDROLA Group has pledged not to build any additional thermal power plants to those already in place and expects that this type of generation will remain in operation. This is justified mainly by the need to provide power to the population without access to electricity or to ensure an adequate integration of renewable energy.

It should also be borne in mind that some of the Group's businesses, such as gas transmission and distribution in the United States and the United Kingdom, as well as part of gas retail supply in Spain and the United Kingdom, for example, are regulated businesses. Any possible withdrawal from these activities would require regulatory authorisation. In addition, the role of these assets in each country's energy transition is uncertain and depends on the future policies and measures adopted by governments or regulators. Therefore, their useful life has not been changed in these financial statements either. Should any decisions be taken by the regulator, such as shortening the useful life of these assets, the IBERDROLA Group considers that the economic effects would not have a significant impact, as the regulation would compensate the Group through tariffs, given that the regulation itself guarantees the profitability of the investments made.

Consequently, in general, the IBERDROLA Group considers it impractical to accelerate the depreciation of emitting assets, either because they are required as back-up or because their useful life depends on actions by third parties beyond the IBERDROLA Group’s control. Nor has it accelerated the timing of provisions for the closure or decommissioning of facilities as a result of climate change. However, it will continue to monitor the system's needs and the decisions of governments and regulators to determine whether it will need to accelerate the depreciation of these assets in the future.

**Impairment test**

The projections used in the impairment tests of non-financial assets (Note 14) are aligned with the energy scenario described in 6.a) and the strategic vision included in 6.b). The aforesaid projections match the best forward-looking statements available to the IBERDROLA Group and include the investment plans for each country prevailing at that time. These plans respond to the IBERDROLA Group’s strategy and are based on the 2030 Sustainable Development Scenario (SDS) as the central scenario, which includes the objectives set out in the Paris Agreement with the adjustments described above.

These projections take into account the impact that new renewable power plants coming on stream are expected to have on wholesale and retail electricity prices, as well as developments in fuel prices (gas and electricity) and emission allowances as a result of the aforementioned agreements, as indicated above.
Climate risks

Section 4.6.2 "Operational risks – Climate change of the Management Report", describes the climate risks, including physical and transition risks, considered by the Group for its various businesses.

6.d) Financing

In keeping with a sustainable business model, the IBERDROLA Group demonstrates this commitment to ESG (Environmental, Social and Governance) financing in the different geographies in which it operates and through the different instruments and formats it uses to obtain financing. The objective here is threefold: (i) to align its financial strategy with its purpose, values and investment strategy; (ii) to optimise its financial cost; and (iii) to diversify its sources of financing, making sustainability both an end and a means to achieve the financial strength it pursues and for which it is widely known.

The ESG financing signed by the IBERDROLA Group in 2022 amounts to EUR 9,512 million. The breakdown by product is as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>Note</th>

Green financing arrangements

• Obligations and Bonds

In the capital market, the IBERDROLA Group is the world’s leading private group when it comes to green bonds issued.

In 2022, the IBERDROLA Group increased its volume of green bonds issued for a combined amount of EUR 3,237 million; in the Corporation, EUR 2,950 million; at Avangrid, USD 125 million (EUR 118 million) and at Neoenergia, BRL 950 million (EUR 169 million).

• Bank loans

In the banking market, in May 2022 Iberdrola Mexico extended the maturity of the first green loan signed in Latin America (USD 400 million) for an additional year until May 2024.
• **Multilateral loans**

In 2022, the Corporation signed four green loans with the European Investment Bank (EIB) for a total of EUR 893 million and Neoenergia increased its green financing with a Super Green Loan arranged with International Finance Corporation (IFC), a member of the World Bank Group, in the amount of BRL 550 million (EUR 98 million) to finance the upgrading, expansion and digitalisation of transmission networks.

• **Loans with development banks and export credit agencies (ECAs)**

In April 2022 IBERDROLA signed a EUR 35 million loan with the Spanish Instituto de Crédito Oficial (ICO).

The IBERDROLA Group has continued to diversify its sources of financing, establishing new commercial relationships with export credit agencies (ECAs). These credit agencies have insurance policies that cover significant percentages of the financial risks assumed by banks, thus enabling IBERDROLA to diversify its sources of financing and reduce risk consumption by banks.

As a result, IBERDROLA signed two green loans during the 2022 financial year, for a total of EUR 1,500 million: EUR 1,000 million guaranteed by the Danish Export Credit Agency (EKF) and EUR 500 million guaranteed by the Spanish Export Credit Agency (CESCE).

• **Structured financing**

In 2022 AVANGRID increased its green financing by USD 271 million (EUR 254 million) under the tax equity investment approach.

**Financing linked to the achievement of sustainability goals (SDGs)**

The IBERDROLA Group has also entered into other financing contracts with the ESG label. These are sustainable transactions that, rather than earmarking funds, link certain elements of the instrument to sustainability metrics or the achievement of strategic milestones aligned with the Sustainable Development Goals.

• **Credit facilities linked to sustainable goals**

In 2022, a new and innovative syndicated credit facility was signed for EUR 2,500 million, linked to the Company’s water footprint.

• **Bank loans linked to sustainable goals**

In 2022 IBERDROLA signed bank loans for an aggregate amount of EUR 995 million linked to its water management indicator.

At 31 December 2022, the total composition of the IBERDROLA Group’s ESG financial transactions portfolio is as follows:
<table>
<thead>
<tr>

</tbody>
</table>

(*) Including 100% green financing of projects with partners, amounting to EUR 2,416 million, the portfolio of ESG financial transactions as at 31 December 2022 totalled EUR 48,473 million.

### 7. CHANGES IN THE SCOPE OF CONSOLIDATION AND OTHER SIGNIFICANT TRANSACTIONS

#### Business combinations

In 2022, the IBERDROLA Group has not carried out any relevant business combinations.

In 2021, the IBERDROLA Group also carried out the following business combinations:

**Neoenergia Distribuição Brasília (formerly CEB Distribuição)**

In December 2020, Bahia Geração de Energia S.A., a company wholly owned directly by Neoenergia S.A., was awarded 100% of the share capital of the Brazilian company CEB Distribuição S.A. (CEB Distribuição) in a public auction. The privatisation process was managed through a public auction on the Brazilian stock exchange.

CEB Distribuição holds the electric power distribution concession for the region of Brasília, an area of approximately 5,800 square kilometres. It serves approximately 1.1 million customers through a distribution network of more than 9,700 kilometres. This concession expires in 2045.

For the acquisition to be completed, the required regulatory approvals had to be secured from the Brazilian authorities, and other common conditions in these types of deals also had to be fulfilled. Both of these requirements were met. The takeover took place on 2 March 2021.

After the takeover, CEB Distribuição was renamed Neoenergia Distribuição Brasília. The fair value of the assets and liabilities of Neoenergia Distribuição Brasília and their carrying amount at the takeover date were as follows:
Poland

The IBERDROLA Group has reached an agreement with CEE Equity Partner to buy three wind farms in Poland with a total capacity of 162.9 megawatts (MW). Two of the projects (Zopowy and Korytnica 1), with a capacity of 112.5 MW, are already in operation, while the third project (Korytnica 2), with 50.4 MW, started construction in March 2022. The takeover took place on 22 June 2021.

Goodwill

Details of goodwill at 31 December 2021 arising on the above business combinations were as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>Neoenergia Distribuição Brasília</th>
<th>Poland</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fair value of net acquired assets</td>
<td>285</td>
<td>142</td>
<td>427</td>
</tr>
<tr>
<td>Total acquisition cost</td>
<td>389</td>
<td>147</td>
<td>536</td>
</tr>
<tr>
<td>Goodwill from the acquisition (Note 9)</td>
<td>104</td>
<td>5</td>
<td>109</td>
</tr>
</tbody>
</table>

The resulting goodwill consists primarily of future economic benefits arising from the acquired company’s own activities that do not meet the conditions for separate accounting recognition at the time of the business combination.

Other information

Since the takeover, the acquisition of Neoenergia Distribuição Brasilia and the wind farms in Poland contributed EUR 4 million to the IBERDROLA Group's net profit from continuing operations in 2021.
Had the acquisitions taken place on 1 January 2021, the contribution to net sales and net profit for the year from continuing operations of the IBERDROLA Group in 2021 would have been EUR 683 million and EUR 4 million, respectively.

The costs incurred in the acquisitions amounted to EUR 4 million.

**Sale of Group companies**

On 30 March 2021, IBERDROLA and MAPFRE, S.A. signed a strategic alliance to jointly invest in renewable energies in Spain. The alliance has begun with 230 MW: 100 MW operational wind and 130 MW photovoltaic under development, with the objective of incorporating further green projects to reach 1,000 MW. The agreement was structured through the company Energías Renovables Ibermap, S.L. (IBERMAP), in which MAPFRE holds an ownership interest of 80% and IBERDROLA holds 20% and is also responsible for developing, building and maintaining the facilities.

Under the terms of this strategic alliance, IBERDROLA contributed the following to IBERMAP:

- on 10 June, 95.3 MW relating to the wind farms SE Altamira (49.3 MW), SE La Linera (28 MW) and SE La Gomera (18 MW). On 30 June, it sold 80% of its shareholding to MAPFRE in exchange for EUR 51 million. The transaction has resulted in the loss of control of IBERMAP. In addition, the Group has valued the 20% stake it retains at fair value at the transaction date.

- on 30 September it sold 99.8 MW corresponding to the wind farms SE Tacica de Plata (26 MW), SE Nacimiento (23.8 MW) and SE Savallá Comtat (50 MW) in exchange for EUR 116 million; and

- on 4 November it sold 100 MW corresponding to the Alto de Layna (50 MW) and Alto de la Degollada (50 MW) wind farms in exchange for EUR 58 million.

As a result of all the foregoing, the IBERDROLA Group recognised a capital gain amounting to EUR 230 million under “Other operating income” in the consolidated Income statement for 2021.

**Transactions with non-controlling interests (Note 21)**

– On 3 October 2022, IBERDROLA, through its subsidiary in Brazil, Neoenergia, carried out a voluntary public takeover bid (PTB) targeting the minority shareholders of Neoenergia Pernambuco, representing 9.13% of the company’s share capital. In addition, as envisaged in the PTB, the redemption and cancellation of the remaining shares of Neoenergia Pernambuco that remained outstanding after the takeover bid, representing 1.22% of the share capital, was approved.
Since the IBERDROLA Group already controlled the company, the transaction was recognised as a transaction in non-controlling interests, thus generating a reduction of EUR 39 million in “Non-controlling interests” and a credit of EUR 24 million under the “Other reserves” heading of the consolidated Statement of financial position at 31 December 2022.

- In September 2022, Iberdrola Renovables Deutschland GmbH entered into an agreement for the acquisition by Youco F22-H451 Vorrats-GmbH & Co. KG—a company belonging to the group of which Energy Infrastructure Partners AG is the parent company—, of a 49% stake in the share capital of Iberdrola Renovables Offshore Deutschland GmbH, the owner of the Wikinger offshore wind farm in Germany with an installed capacity of 350 MW, inaugurated in October 2018. Iberdrola Renovables Deutschland will retain control of IBERDROLA Renovables Offshore Deutschland and the IBERDROLA Group will continue to provide it with the operation and maintenance services required to run the wind farm.

The consideration for the transaction amounts to approximately EUR 700 million. Since the IBERDROLA Group already controlled the company, the transaction was recognised as a transaction in non-controlling interests, thus generating an increase of EUR 625 million in “Non-controlling interests” and a credit of EUR 17 million under the “Other reserves” heading of the consolidated Statement of financial position at 31 December 2022.

- In 2022, IBERDROLA acquired additional shares in NEOENERGIA worth EUR 20 million. In the last quarter of 2021, IBERDROLA acquired additional shares in NEOENERGIA worth EUR 60 million. At 31 December 2022 and 2021, the percentage ownership stands at 53.5% and 52.905%, respectively.

Since the IBERDROLA Group already controlled the company before the previous acquisitions, the transactions were recognised as a transaction in non-controlling interests, thus generating a reduction of EUR 28 million and EUR 81 million in “Non-controlling interests” and a credit of EUR 8 million and EUR 21 million under the “Other reserves” heading of the consolidated Statement of financial position at 31 December 2022 and 2021, respectively.

Other significant transactions

Avangrid, Inc. announced in September 2021 that its indirect wholly-owned subsidiary Avangrid Renewables, LLC (Avangrid Renewables) entered into an agreement with CI-II Park Holding LLC, CI III Park Holding LLC and CI IV Master DEVCO LLC, all subsidiaries of Copenhagen Infrastructure Partners, and Vineyard Wind LLC, to reorganise the assets of Vineyard Wind LLC, the joint venture 50% owned by Avangrid Group and 50% owned by Copenhagen Infrastructure Partners for the development of certain offshore wind projects on the east coast of the United States of America. According to the signed agreement:

i. Vineyard Wind 1, the 800 megawatt project to be built off the coast of Martha’s Vineyard, Massachusetts, will continue to be owned 50/50 by each of the two partners;
ii. Avangrid Renewables will acquire 100% ownership of the rights to the OCSA 0534 lease area, comprising the 804-megawatt Park City Wind project, which will supply clean energy to Connecticut, and Commonwealth Wind, which bid for up to 1,200 megawatts in Massachusetts’ third competitive offshore wind auction on 16 September 2021; and

iii. Copenhagen Infrastructure Partners will acquire 100% ownership of the rights to the OCS-A 0522 lease area, which has the potential for the development of approximately 2,500 megawatts of clean energy supply projects in New England and New York.

The transaction has resulted in a credit of EUR 228 million is recognised under “Result of equity-accounted investees — net of tax” of the consolidated Income statement for financial year 2022 (Note 15.a).

8. SEGMENT INFORMATION

As described in Note 2.c, during financial year 2022 the IBERDROLA Group optimised its organisational structure, based on a dual structure of geographic areas and businesses. This makes it possible to coordinate and combine the day-to-day management of the businesses in each country or territory while exchanging information and best practices among the companies belonging to the IBERDROLA Group, in order to maximise the operating efficiency and value of its businesses as a whole.

Based on the above, the segment information has been adapted in accordance with IFRS 8 for the preparation of the financial statements for 2022 with regard to defining segments in line with the “management approach”, i.e. how the top decision-making authorities review financial performance and financial position information during the operating or resource allocation decision-making process. Furthermore, the information for the previous period has been restated.

This matrix structure with segments by geographical area and by business is as follows:

By geographical area:

• Spain;
• United Kingdom;
• United States;
• Mexico;
• Brazil; and
• Iberdrola Energía Internacional (IEI), where the most relevant countries are Germany, France and Australia.
Businesses:

- **Renewables and Sustainable Generation Business**: includes the generation of electricity from renewable sources (onshore and offshore wind, photovoltaic and hydroelectric), as well as other energy sources, and conventional nuclear and combined cycle generation in Spain.

- **Networks business**: including all the energy transmission and distribution activities, mainly gas and electricity, and any other regulated activity.

- **Customers business**: including energy retail supply activities, mainly gas and electricity, and other products and services, including hydrogen, as well as non-renewable generation in Mexico as it is mostly for third parties.

- **Other businesses**: other non-energy businesses.

In addition, the Corporation reflects the costs of the IBERDROLA Group’s structure, derived mainly from the corporate functions, whether at global or local level, which provide services to the companies and businesses on the basis of intra-group service contracts entered into with Iberdrola, S.A. or with the corresponding country subholding company.

The transactions between the different segments are executed on an arm's-length basis.

The key figures for the identified segments are as follows:

<table>

</table>
The amounts incurred in research and development activities (expenses and investment) in 2022 and 2021 total EUR 363 million and EUR 337 million respectively.

The fully amortised intangible assets still in use at 31 December 2022 and 2021 amounted to EUR 1,747 and 1,247 million, respectively.

At 31 December 2022 and 2021, the IBERDROLA Group had commitments to acquire intangible assets totalling EUR 28 and 33 million, respectively.

In addition, at 31 December 2022 and 2021, there were no significant restrictions on the ownership of intangible assets, except for the regulated businesses, which may require authorisation from the corresponding regulator for certain transactions.

The allocation of goodwill to the various cash-generating units at 31 December 2022 and 2021 is as follows:

The above aggregation by country (United Kingdom, United States, Brazil, France, Australia and others) corresponds to groups of cash-generating units including, where applicable, electricity and gas retail supply, regulated activities and renewables.

The allocation of indefinite life and in-progress intangible assets at 31 December 2022 and 2021 to the different cash generating units is as follows:
The undefined useful life assets mostly correspond to the acquisition cost of licences to operate in different businesses which are the core business in the activities performed by the IBERDROLA Group.

The main change in intangible assets in progress under “Other” relates to the concession of the Tâmega hydroelectric complex, which has entered into operation.

### 10. INVESTMENT PROPERTY

Changes in 2022 and 2021 in the IBERDROLA Group’s investment property were as follows:

The investment property owned by the IBERDROLA Group relates primarily to properties used for leasing. Income accrued in 2022 and 2021 from this activity amounted to EUR 21 and 17 million, respectively, and was recognised under the “Revenue” heading of the consolidated Income statement. Operating expenses directly related to investment property in 2022 and 2021 were not significant.
The fair value of investment property in use at 31 December 2022 and 2021 amounted to EUR 350 and 326 million, respectively. This fair value (classified in Level 3) is determined via expert independent appraisals made annually in accordance with the Valuation Standards published by the Royal Institution of Chartered Surveyors (RICS) of Great Britain, in their January 2014 edition, as last updated in 2020. The valuations at 31 December 2022 and 2021 were carried out by Knight Frank España. The assets have been valued individually and not as part of a property portfolio.

The methods applied for the calculation of fair value have been the discount of cash flows, the capitalisation of revenue and the comparison method, checked, as far as possible, against comparable (peer) transactions to reflect the reality of the market and the prices to which they are currently closing the asset operations of similar characteristics to the reference operations.

The discount of cash flows is based on a prediction of the probable net income that investment property will generate for a period of time and it considers its residual value at the end of the period. Cash flows are discounted at an internal rate of return that reflects the urban, construction and business risk of the asset.

The key variables and assumptions of the cash flow discount method are:

- Net income that the property will generate for a certain period of time, considering the initial contractual situation, development of renters and expected income, marketing costs, divestment expenses (variable percentage depending on the sale price), etc.
- Discount rate or objective internal return rate adjusted to reflect the risk that the investment entails depending on the localisation, occupation, renter quality, property age, etc.
- Disposal return, which consists of an estimate of the exit (sale) price of the property applying an estimated return for the close of the transaction at that date, considering the criteria of obsolescence, liquidity and market uncertainty.

For rental property that does not include such a broad number of variables and involves leased property for a period of time greater than 10 years and up and one renter, the capitalisation method for income is usually applied. This method consists of the perpetual capitalisation of the current contractual income via a capitalisation rate that inherently includes the risks and uncertainties that could arise in the market.

As at 31 December 2022 and 2021 the amount of fully depreciated investment property amounted to EUR 3 million. There are no restrictions on its realisation in any of the financial years. Furthermore, there are no contractual obligations for the acquisition, construction, development, repair or maintenance of investment property.
## 11. PROPERTY, PLANT AND EQUIPMENT

Fully depreciated property, plant and equipment still in use at 31 December 2022 and 2021 amounted to EUR 3,075 million and EUR 3,586 million, respectively.

At 31 December 2022 and 2021, the IBERDROLA Group had commitments to acquire property, plant and equipment totalling EUR 4,992 million and EUR 5,218 million, respectively.

Additional information on litigated assets

- In January 2021, construction began on the New England Clean Energy Connect (NECEC) project, after obtaining all the necessary permits granted by public administrations, and was halted in November 2021 pending a court decision to determine the legality of a citizens’ initiative that, among other requirements, called for the approval of Congress for certain transmission lines when they cross or use public land. On 30 August 2022, the Maine Court of Justice handed down a judgment remanding the appeal to the lower court stating that it would be unconstitutional to stop the project without compensation if the project had been started. The litigation is ongoing and is expected to be settled in 2023. The combined investment to date is approximately USD 550 million.

- In 2022, the interconnection agreement to operate the Monterrey and Enertek (Mexico) plants on a self-supply basis came to an end and the corresponding permits to operate on a market basis were applied for. At the date of preparation of this financial information these permits have not been obtained. Despite the fact that the rulings granted an amparo injunction to the plants in question to continue operating, the CRE has not responded to the migration applications submitted to date. The company is hopeful that the delay in obtaining the permits will not affect the plants’ viability, in which case it will continue pursuing the pertinent legal claims. The net book value amounts to USD 219 million and USD 77 million, respectively.
– The Administrative Chamber of the High Court of Justice of Extremadura ruled to partially uphold the appeal lodged by one of the three owners of the land on which the Usagre Núñez de Balboa (Badajoz) photovoltaic plant is located, against the expropriation resolution of the Provincial Compulsory Expropriation Board of Badajoz. The judgment stressed that the company had, at all times, sufficient legal title to build the plant without requiring expropriation and indicated that the expropriation application lacked grounds or justification with an order for the restitution of ownership and possession of the land. IBERDROLA has brought an appeal in cassation against the judgment, which is awaiting admission of the appeal by the Supreme Court at the date of preparation of these financial statements. The combined investment to date is approximately EUR 262 million.

– In addition, the Santiago Eólico plant, operational since January 2021, has had its interconnection contract terminated, which means that the plant is not operating. IBERDROLA will shortly bring the appropriate legal action in defence of its rights. The combined investment to date is approximately USD 200 million.

An analysis of the impact of the current status of these proceedings in terms of the recoverability of the amounts capitalised has been carried out and no impairment has been detected at the date of preparation of this financial information.
12. RIGHT-OF-USE ASSETS

Changes in 2022 and 2021 in right-of-use assets resulting from contracts in which the IBERDROLA Group is the lessor were as follows:

IBERDROLA Group is the holder of lease agreements enabling the assignment of use of the land used for the installation of wind farms, solar plants and other renewable facilities, as well as electricity distribution and transmission infrastructures. These are long-term agreements and/or include extension options which may adjust the lease term to the useful life of property, plant and equipment installed there. The payment of the rent includes fixed and variable amounts calculated based on parameters such as electricity generation or the sales of the facilities.

Moreover, the Group maintains long-term lease contracts with options to be extended on certain office buildings.

Many of the lease contracts for land and buildings are indexed to consumer price indices or similar indicators.

www.iberdrola.com
The duration of the transmission and distribution concessions is 30 years, and they may be extended for up to a further 30 years upon request by the concession holder and at the discretion of the awarding authority, which is the Agência Nacional de Energia Elétrica (ANEEL). The concession holder may not transfer such assets or use them as collateral without the prior written consent of the regulatory body. For distribution concessions, at the end of the concession ownership automatically reverts to the concession grantor and the amount of compensation due to the concession holder is assessed and determined.

Income from previous concession agreements includes the provision of construction services (Note 37) and operation and maintenance services for facilities owned by the awarding authority. The provisions of said services constitute two separate execution obligations incorporating different margins.

Construction services have a length of 3 to 5 years, whereas the provision of operation and maintenance services for facilities starts on the date they are delivered. In general, the latter date determines when the agreed annual payments are collected as part of the concession agreements. Such annual payments are collected during the concession period (normally 30 years), so they have a significant financial component.

14. IMPAIRMENT OF NON-FINANCIAL ASSETS

Methodology for designing impairment tests

At least yearly, the IBERDROLA Group analyses its assets for indications of impairment. If such indications are found, an impairment test is conducted.

The IBERDROLA Group also conducts a systematic analysis of the impairment of cash-generating units that include goodwill or intangible assets in progress or with indefinite useful life, typically by applying the value in use method. Recovery of goodwill is analysed at country level (unit or group of cash-generating units) according to the Group's management structure.

The projections used in the impairment tests are based on the best forecast information held by the IBERDROLA Group and include the investment plans for each country prevailing at that time. These plans are designed on the basis of the IBERDROLA Group's strategy, taking into account the objectives of the Paris Agreement (Note 6), and are based on the electrification of the economy with renewable energy sources, to advance towards decarbonisation and climate neutrality, and the objective of the IBERDROLA Group becoming carbon neutral ahead of the European Union’s target date.

a) Assumptions used in the cash-generating units of the Customers segment:

- Number of customers: expectations of the evolution of the number of customers have been used in the markets where the company operates and its relative position therein.
– Unit margin for electricity and gas retail supply: existing sales and purchase contracts have been used, as well as expectations of unit margins based on knowledge of the markets where the company operates and its relative position therein.

– Investment: the projections are based on the best available information about the cost of the investments to be made in the coming years.

b) Assumptions used in the cash-generating units of the Networks segment:

– Regulated remuneration: approved remuneration has been used for years in which it is available, while in subsequent periods revision mechanisms of such remuneration set in different regulations have been used, and these have been applied in line with the estimated costs of the corresponding cash-generating units.

– Investment: the projections were based on investment plans consistent with the expected demand growth and undertakings in each concession, with the minimums set by each regulator and with the estimate of future remuneration used.

– Operation and maintenance costs: the best available estimation of the performance of the operation and maintenance cost was used, which is in line with the remuneration assumed to be received in each year.

c) Assumptions used in the cash-generating units of the Renewables and Sustainable Generation segment:

– Facilities’ production: the operation hours of each plant were consistent with their historical output. In this respect, the long-term predictability of wind output was taken into account, which was also covered by regulatory mechanisms in practically all countries that enabled wind farms to produce whenever meteorological and network conditions allowed it.

– Electricity sales prices: the prices stipulated in the purchase and sales agreements signed have been used, where applicable. For unsold production, futures prices of the markets in which the IBERDROLA Group operates have been used. Existing support mechanisms have been taken into consideration in all cases.

– Investment: the projections were based on the best information available about the plants that are expected to be put into operation in the coming years, taking into account the fixed prices stated in the contracts to buy equipment from various suppliers, as well as the technical and financial capacity of the IBERDROLA Group to successfully fulfil the planned projects.

– Operating and maintenance costs: the prices set in land leases and maintenance agreements for the useful life of the facilities were used.
d) Forecast period and nominal growth rate:

The table below summarises the forecast period of future cash flows and the nominal growth rate (g) used to extrapolate these projections beyond the forecast period for the different groups of cash-generating units.

</table>

Although under IAS 36: “Impairment of Assets”, it is recommended to use projections not exceeding five years for impairment test purposes, IBERDROLA has decided to use the periods included in this table for the following reasons:

- The most appropriate method for production assets in the energy business is using their remaining useful lives. This is due to the fact that in the liberalised business there are long-term energy sale contracts in force and long-term estimated prices curves are frequently used in the operating activity of the IBERDROLA Group (contracts, hedges, etc.).
- Energy is a basic necessity. Therefore, the business of electricity and gas retail supply is influenced by long-term governmental policies and is based on stable relationships with customers, using in certain cases infrastructures such as smart meters with long recoverability periods.
- Electricity transmission and distribution concessions include longer regulatory periods and the method that the regulator will use to calculate the new tariff at the beginning of the new regulatory period is known.
- The IBERDROLA Group considers its projections to be reliable and that past experience demonstrates its ability to predict cash flows in periods such as those under consideration.

Moreover, the nominal growth rate considered in the electricity and gas transmission and distribution activities in Brazil, the United Kingdom and the United States is consistent with the market and inflation growth forecasts used by the IBERDROLA Group for these markets.
e) Discount rate

The methodology for calculating the discount rate used by IBERDROLA is to add the specific asset risks or risk premium of the asset or business to the temporary value of money or risk-free rate of each market.

The risk-free rate is effectively that of the 10-year Treasury bond in the market in question, which must have sufficient depth and solvency. For countries whose economies or currencies have insufficient depth and solvency, country risk and currency risk are estimated and the total of all these components is assimilated to the cost of funding without the risk spread of the asset.

The asset’s risk premium corresponds to the specific risks of the asset, which is calculated taking into account his unlevered betas estimated on the basis of peer companies performing the same main activity.

The following pre-tax discount rates are used in the impairment tests for the different groups of cash-generating units:

<table>

Impairment and write-offs recognised in 2022 and 2021

Note 41 shows the amounts recognised as write-downs and provisions/(reversals) of provisions for non-financial assets affecting the 2022 and 2021 consolidated Income statement.
Sensitivity analysis

The IBERDROLA Group has performed several sensitivity analyses of the impairment test results carried out in a systematic way including reasonable changes in a series of basic assumptions defined for each cash-generating unit (or groups of cash generating units) that have goodwill assigned to them:

- **Electricity and gas retail supply in the United Kingdom and Brazil:**
  - Decrease of 10% in the unit margin.
  - No increase in the electricity and gas customer base.
  - Increase of 10% in investment costs.

- **Electricity transmission and distribution in the United Kingdom, the United States and Brazil:**
  - Decrease of 10% in rate of return on which regulated remuneration is based.
  - Increase of 10% in operating and maintenance costs.
  - Decrease of 10% in investment (resulting in a subsequent decrease in remuneration).

- **Renewable energies in the United Kingdom, the United States, Brazil, Australia and France:**
  - Decrease of 5% in produced energy.
  - Decrease of 10% in total price per kWh, solely applicable to production for which there are no long-term sales agreements.
  - Increase of 10% in operating and maintenance costs.
  - Increase of 10% in investment costs.

The IBERDROLA Group has also conducted an additional sensitivity analysis, in which it raised the applicable discount rate in the United Kingdom, the United States, Australia and France by 50 basic points and in Brazil by 100 basic points.

The individual sensitivity analyses performed on the underlying assumptions do not reveal any significant impairment, except in the following case:

- **Renewable energies in Australia,** whose value in use is EUR 462 million more than its carrying amount, in which a lower market price of 6.5% would bring the value in use to below the carrying amount.
15. FINANCIAL ASSETS

15.a) Equity-accounted investees

Changes in 2022 and 2021 in the carrying amount of equity-accounted investments in associates and joint ventures of the IBERDROLA Group (Appendix I) are as follows:

The IBERDROLA Group holds its stakes in Companhia Hidrelétrica Teles Pires, S.A (TELES PIRES), Energética Águas da Pedra, S.A. (EAPSA) and Norte Energia, S.A. (NORTE ENERGÍA) through NEOENERGÍA.
Main transactions

- In December 2022, NEONERGIA concluded a share swap agreement with Eletronorte, whereby NEONERGIA transferred its 50.56% stake in Teles Pires Participações, 0.9% in Companhia Hidrelétrica Teles Pires and 100% in Baguari I Geração de Energia Elétrica to Eletronorte, whose combined fair value amounts to BRL 788 million, while in exchange, Eletronorte transfers its 49% stake in Energética Águas da Pedra (EAPSA), 0.04% in Neoenergia Coelba, 0.04% in Neoenergia Cosern and 0.04% in Afluente Transmissão de Energia Elétrica, together valued at the same amount, to NEONERGIA. The transaction is expected to close within six months, with the possibility of being delayed for a further six months subject to compliance with certain conditions precedent that are typical in such transactions.

At year-end 2022, the IBERDROLA Group’s interest in the companies Teles Pires and Baguari (through its subsidiary NEONERGIA) meets the requirements of IFRS 5 “Non-current Assets Held for Sale and Discontinued Operations” for classification as such in the consolidated Statement of financial position, to the extent that (i) there is a plan to sell at prices that are reasonable in comparison to the fair value of the assets subject to the transaction; and (ii) it is foreseeable that the sale will be completed within 12 months. The IBERDROLA Group presents these interests under the headings “Assets held for sale” and “Liabilities held for sale” in the consolidated Statement of financial position at 31 December 2022 for an amount of EUR 166 million and EUR 27 million, respectively.

The impairment loss arising from the transaction in the amount of EUR 79 million has been recognised under “Result of equity-accounted investees — net of taxes” and “Other operating income” in the consolidated Income statement for financial year 2022.

- At year-end 2021, the IBERDROLA Group’s 10% interest in the Brazilian company NORTE ENERGIA (through its subsidiary NEONERGIA) met the requirements of IFRS 5 “Non-current Assets Held for Sale and Discontinued Operations” for classification as such in the consolidated Statement of financial position, to the extent that (i) there was a plan to sell at prices that are reasonable in comparison to the fair value of the assets subject to the transaction; and (ii) it was foreseeable that the sale would be completed within 12 months. The IBERDROLA Group presents this interest under the headings “Assets held for sale” in the consolidated Statement of financial position at 31 December 2022 and 2021 for an amount of EUR 142 million and EUR 124 million, respectively.

The impairment loss amounting to EUR 75 million was recognised under “Result of equity-accounted investees — net of tax” of the consolidated Income statement for financial year 2021.

- The IBERDROLA Group, through the company Vineyard Wind, LLC, is continuing to develop a large scale offshore wind farm off the coast of Massachusetts, in the United States. During financial year 2021, the IBERDROLA Group received the repayment of previously made capital contributions, totalling EUR 128 million. In 2022, the IBERDROLA Group took control of the project through the transaction described in Note 7.

Collection rights in Brazil

The “Collection rights in Brazil” heading relates to receivables by the Brazilian companies upon termination of their service concession arrangements. Law 12.783/13 provides that such indemnification must be determined by the replacement value (Valor Novo de Reposição, VNR) of the concession assets which have not been amortised by the end of the concession period, using the residual value of the Asset regulatory base (Base de Remuneração Regulatória, BRR) at the end of the concession agreement.

The methodology established by the regulator enables reasonable estimates to be made of the amounts to be collected at the end of the concession, to the extent that the granting government protects the value of the Regulatory Asset Base once each ordinary tariff review has been passed. These ordinary reviews are conducted every four or five years, depending on the concession. This means that after the regulator has conducted a tariff review, the value of the Regulatory Asset Base prior to that date is modified by the Brazilian Large Consumers Prices General Index (Índice Nacional de Preços ao Consumidor Amplo, IPCA). The next tariff review will determine the value of the regulatory asset base only with regard to additions in the interval between two tariff reviews.
To estimate the amount of the financial asset, observable values are used. Specifically, the net replacement value, as calculated by the energy regulator in the course of the latest tariff review. The amount is updated in the intervals between tariff reviews by additions to the underlying fixed assets or, as the case may be, any changes in the method of calculation of the net realizable value and the IPCA.

Non-current deposits and guarantees

“Non-current deposits and guarantees” essentially corresponds to the portion of guarantees and deposits received from customers at the time their contracts are arranged as security of electricity supply (recorded under the “Non-current financial liabilities — Other non-current financial liabilities” heading of the consolidated Statement of financial position — Note 32) and have been filed with the competent public authorities in accordance with the current legislation in Spain.

Receivable for financing the system imbalance

Law 24/2013, on the electricity sector, states that if an imbalance occurs due to revenue shortfalls in the settlement of the electricity sector, the amount may not exceed 2% of the estimated revenue of the system for that year. Further, the accumulated debt due to imbalances from previous years may not exceed 5% of the estimated revenue of the system. If these limits are exceeded, access tariffs will be reviewed at least in an amount equivalent to the total excess beyond those limits. This law also states that the part of the imbalance due to revenue shortfalls which, without exceeding these limits, is not compensated by increasing tariffs and charges, will be temporarily financed by the subjects of the settlement system in proportion to the remuneration pertaining to them for the activities they perform.

The final settlement of the Spanish electricity system for 2021, as estimated in that year, presented a shortfall which was offset by unused surpluses from previous years. In 2022, IBERDROLA Group estimated that the final settlement of the Spanish electricity system would again present a shortfall, which would also be offset by unused surpluses from previous years. The deficit financed by the IBERDROLA Group at 31 December 2022 and 2021 amounts to EUR 53 million and EUR 148 million, respectively.

At 31 December 2022 and 2021 the amounts of EUR 10 and 122 million, respectively, were subject to a factoring contract with the non-recourse assignment of payment rights. Therefore, said amounts have been derecognised from the consolidated Statement of financial position at 31 December 2022 and 2021.

The deficit financed by the IBERDROLA Group at 31 December 2021 was collected in 2022.
16. TRADE AND OTHER RECEIVABLES

</tbody>
</table>
**PIS/COFINS Brazil**
In September 2019, the Brazilian federal government issued a favourable decision for NEOENERGIA COSERN and NEOENERGIA COELBA regarding the recognition of the credit right related to unduly paid amounts for including the Operações relativas à Circulação de Mercadorias e Prestação de Serviços de Transporte Interestadual e Intermunicipal e de Comunicação (ICMS) tax in the calculation base for Programas de Integração Social (PIS) and the Contribuição para Financiamento da Seguridade Social (COFINS). A decision upholding NEOENERGIA PERNAMBUCO’s claim was handed down in December 2020.

As a result, the IBERDROLA Group recognised receivables due to the exclusion of the ICMS from the tax base credited to payables under “Other non-current financial liabilities” of the consolidated Statement of financial position (Note 32), on the understanding that the tax credit would be passed on to end customers in accordance with the legal and regulatory rules in the Brazilian electricity sector, although it would not be paid in the short term. The current balance of the account receivable was recognised under “Current trade and other receivables — Other public administration receivables” in the consolidated Statement of financial position (Note 35).

**Valuation changes for impairment**

The movements in valuation changes resulting from credit losses expected from previous balances are as follows:

<table>
<thead>
<tr>
<th></th>
<th>2022</th>

<td>1,040</td>
</tr>
</tbody>
</table>

Most of this provision relates to gas and electricity consumers.
17. MEASUREMENT AND NETTING OF FINANCIAL INSTRUMENTS

With the exception of financial derivative instruments, most of the financial assets and liabilities registered in the consolidated Statements of financial position correspond to the financial instruments classified at amortised cost.

The fair value of “Bank borrowings, bonds and other marketable securities” under current and non-current liabilities in IBERDROLA Group’s consolidated Statement of financial position at 31 December 2022 and 2021 amounted to EUR 45,120 million and EUR 43,360 million, with the carrying amount being EUR 46,587 million and EUR 41,163 million, respectively. Said value is classified in Level 2 of the valuation hierarchy. The fair value of the remaining financial instruments does not differ significantly from their carrying amount.

The IBERDROLA Group measures equity instruments and derivative financial instruments at fair value, provided they can be measured reliably, classifying them into three levels:

- Level 1: assets and liabilities quoted in liquid markets.
- Level 2: assets and liabilities whose fair value is determined using valuation techniques that use observable market assumptions.
- Level 3: assets and liabilities whose fair value is determined using valuation techniques that do not use observable market assumptions.

Details of derivative financial instruments measured at fair value by level are as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>31.12.2022</th>
<th>Level 1</th>
<th>Level 2</th>
<th>Level 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Derivative financial instruments (financial assets)</td>
<td>5,510</td>
<td>3</td>
<td>4,653</td>
<td>854</td>
</tr>
<tr>

<td>(7,088)</td>
<td>(5)</td>
<td>(6,553)</td>
<td>(530)</td>
</tr>
<tr>
<td>Total (Note 29)</td>
<td>(1,578)</td>
<td>(2)</td>
<td>(1,900)</td>
<td>324</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>31.12.2021</th>
<th>Level 1</th>
<th>Level 2</th>
<th>Level 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Derivative financial instruments (financial assets)</td>
<td>4,252</td>
<td>19</td>
<td>4,168</td>
<td>75</td>
</tr>
<tr>
<td>Derivative financial instruments (financial liabilities)</td>
<td>(3,784)</td>
<td>(1)</td>
<td>(3,473)</td>

</tr>
<tr>
<td>Total (Note 29)</td>
<td>468</td>
<td>18</td>
<td>685</td>
<td>(235)</td>
</tr>
</tbody>
</table>

The reconciliation between initial and final balances for derivative financial instruments classified as Level 3 in the fair-value hierarchy is as follows:

<table>
<thead>
<tr>
<th>Derivative financial instruments</th>
<th>2022</th>
<th>2021</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opening balance</td>
<td>(235)</td>
<td>(1)</td>

</tr>
<tr>
<td>Transfers and other</td>
<td>26</td>
<td>(1)</td>
</tr>
<tr>
<td>Closing balance</td>
<td>324</td>
<td>(235)</td>
</tr>
</tbody>
</table>
The income recorded in the consolidated Income statement for 2022 for derivative financial instruments classified in Level 3 is mainly due to the valuation of commodity derivatives, whose effect has been offset in the consolidated Income statement for 2022 by the valuation derivative financial instruments classified in Level 2.

The fair value of Level 3-classified financial instruments has been determined using the discounted cash flow method. Projections of these cash flows are based on assumptions not observable in the market, and mainly correspond to purchase and sale price estimates that the Group normally uses, based on its experience in the markets.

None of the possible foreseeable scenarios of the assumptions given would result in a material change in the fair value of the financial instruments classified at this level.

In addition, the IBERDROLA Group’s financial assets and liabilities are offset and presented net on the consolidated Statement of financial position when a legally enforceable right exists to offset the amounts recognised and the Group intends to settle the assets and liabilities net or simultaneously. The breakdown of netted financial assets and liabilities at 31 December 2022 and 2021 is as follows:

<table>

</tr>
<tr>
<td><strong>Balance at 31.12.2022</strong></td>
<td>189</td>
<td>70</td>
<td>259</td>
</tr>
</tbody>
</table>

The IBERDROLA Group’s nuclear fuel purchase commitments at 31 December 2022 and 2021 amounted to EUR 539 and 487 million, respectively.
19. INVENTORIES

The details of the "Inventories" heading (Note 3.h) of the consolidated Statement of financial position at 31 December 2022 and 2021 are as follows:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Energy resources</td>
<td>330</td>
<td>171</td>
</tr>
<tr>
<td>Emission allowances and renewable certificates</td>
<td>720</td>
<td>539</td>
</tr>
<tr>
<td>Real estate inventories</td>
<td>1,195</td>
<td>1,191</td>
</tr>
<tr>
<td>Land and plots</td>

<tr>
<td>Real estate inventories impairment allowance</td>
<td>(165)</td>
<td>(167)</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>2,159</strong></td>
<td><strong>2,639</strong></td>
</tr>
</tbody>
</table>

Changes in impairment allowances in 2022 and 2021 are as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>2022</th>
<th>2021</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opening balance</td>
<td>167</td>
<td>167</td>

<td>Applications and others</td>
<td>(1)</td>
<td>(1)</td>
</tr>
<tr>
<td><strong>Closing balance</strong></td>
<td><strong>165</strong></td>
<td><strong>167</strong></td>
</tr>
</tbody>
</table>

The 2022 and 2021 consolidated Income statement includes EUR 21 million and EUR 108 million, respectively, in sales of real estate inventories.

The heading “Other inventories” mainly included the transmission line built by East Anglia One Limited (EA1) and sold in December 2022 for GBP 693 million (EUR 787 million) to an OFTO (Offshore Transmission Owner), generating a capital gain of EUR 23 million.

20. CASH AND CASH EQUIVALENTS

The breakdown of this heading in the consolidated Statement of financial position is as follows:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Cash</td>
<td>2,192</td>
<td>959</td>
</tr>
<tr>
<td>Other cash equivalents</td>
<td>2,416</td>
<td>3,074</td>
</tr>
<tr>
<td><strong>Total (Note 4)</strong></td>
<td><strong>4,608</strong></td>
<td><strong>4,033</strong></td>
</tr>
</tbody>
</table>

Other cash equivalents mature or expire within a period of three months and bear market interest rates. There are no restrictions on cash withdrawals for significant amounts.
21. EQUITY

Subscribed capital

Changes in 2022 and 2021 in the different items of share capital of IBERDROLA are as follows:

<table>
<thead>
<tr>
<th>Date of filing at the Mercantile Registry</th>
<th>% Capital</th>
<th>Number of shares</th>
<th>Nominal amount</th>

<td>6,362,094,000</td>
<td>0.75</td>
<td>4,771,570,500</td>
<td></td>
</tr>
</tbody>
</table>

The scrip issues carried out in 2022 and 2021 correspond to the different runs of the Iberdrola Retribución Flexible optional dividend system approved by the shareholders at the General Meeting.

Additionally, on 1 July 2021 and 1 July 2022, it was resolved to reduce capital through the redemption of treasury shares. These resolutions were approved by the shareholders at their General Meetings held on 18 June 2021 and 17 June 2022, respectively.

The General Shareholders' Meeting held on 17 June 2022 has approved, under item 9 of the agenda, the engagement dividend and its payment to all shareholders entitled to participate in the General Meeting (i.e. with shares registered in their name on 10 June), given that the payment conditions had been met, which were the approval of the dividend itself, item 7 of the agenda, and that the quorum reached 70 % of the share capital. The dividend amounted to EUR 31 million (EUR 0.005 gross per share) and was paid on 20 June 2022.

There were no changes to IBERDROLA's share capital beyond those resulting from the transactions described above. There are no claims on IBERDROLA's share capital other than those established by the Spanish Companies Act.

IBERDROLA’s shares are listed for trading on the Spanish electronic continuous market (Mercado Continuo Español), and included in the IBEX-35, Eurostoxx-50 and European Eurostoxx-50 index.

Powers delegated by the General Shareholders' Meeting

On 2 April 2020, shareholders at the General Meeting resolved, in respect of items 22 and 23 on the agenda, to delegate powers to the Board of Directors, with express powers of sub-delegation, for a period of five years, to:

www.iberdrola.com
– increase share capital in the terms and to the limits stipulated in Article 297.1 b) of the Spanish Companies Act (Ley de Sociedades de Capital), with authorisation to exclude preferential subscription rights, and

– issue long- or short-term bonds swappable for and/or convertible into shares in the Company or other companies, and warrants on new or existing shares in the Company or other companies, subject to a cap of EUR 5,000 million. This authorisation includes further powers to: (i) set the terms and conditions and forms of the conversion, exchange or exercise; (ii) increase capital to the extent necessary to meet the conversion requests; and (iii) exclude limited pre-emptive rights in relation to the issues.

Both authorisations have an aggregate limit equal to a maximum nominal amount of 20% of the share capital.

Major shareholders

Since IBERDROLA’s shares are represented by the book-entry system, the exact stakes held by its shareholders are not known. The table below summarises major direct and indirect shareholdings in the share capital of IBERDROLA at 31 December 2022 and 2021, as well as the holdings of financial instruments disclosed by the owners of these stakes in compliance with Royal Decree 1362/2007 of 19 October.

This information is based on filings by the owners of the shares in the official registers of the Spanish National Securities Market Commission (Comisión Nacional del Mercado de Valores, or CNMV) or the company’s financial statements or press releases, and it is presented in the IBERDROLA Group’s Annual Corporate Governance Report 2022 (Management report).

In accordance with Section 23.1 of Royal Decree 1362/2007 of 19 October, enacting the Securities Market Act 24/1988 of 28 July, in relation to transparency requirements regarding information on issuers whose securities are admitted to trading on an official secondary market or other regulated market in the European Union, a shareholder who holds at least 3% of the voting rights is considered to hold a significant holding.

The direct or indirect holders of voting rights exceeding 3% of share capital at 31 December 2022 and 2021 are as follows:

<table>
<thead>
<tr>
<th>Holder</th>

www.iberdrola.com
## Legal reserve

Under the Consolidated Text of the Spanish Companies Act, 10% of profit for each year must be transferred to the legal reserve until the balance of this reserve reaches at least 20% of the share capital.

The legal reserve can be used to increase capital provided that the remaining reserve balance does not fall below 10% of the increased amount of share capital. Otherwise, until the legal reserve exceeds 20% of share capital, it can only be used to offset losses, provided that sufficient other reserves are not available for this purpose.

## Share premium

The Spanish Companies Act expressly permits the use of the share premium account balance to increase capital and does not establish any specific restrictions as to its use.

## Other restricted reserves

“Other restricted reserves” of the “Equity” heading of the consolidated Statement of financial position primarily includes the restricted reserve set up by IBERDROLA in accordance with Article 335.c) of the Spanish Companies Act arising from the capital reductions carried out in prior years through the retirement of treasury shares. The restricted reserves relating to group companies other than the parent IBERDROLA are included under “Retained earnings” of the same heading.
Non-controlling interests

Changes in this heading in 2022 and 2021 are as follows:

<table>

In 2021 Avangrid, Inc. carried out a capital increase in the amount of EUR 3,302 million, which was subscribed by the shareholders according to their percentage of ownership. Accordingly, a payment of EUR 611 million was recognised under “Equity — Non-controlling interests” of the consolidated Income statement at 31 December 2021.

The summarised financial information related to subgroups in which IBERDROLA Group does not have a 100% interest refers to amounts consolidated before intercompany eliminations:

Perpetual subordinated bonds

These bonds do not have a contractual maturity date. After analysing the issue conditions, the IBERDROLA Group recognises the cash received with a credit to the “Non-controlling interests” heading under equity in the consolidated Statement of financial position, as it considers that it does not qualify for classification as a financial liability, given that the IBERDROLA Group does not have a commitment to deliver cash, as the circumstances that would require it to do so — namely distribution of dividends and exercising of its right to redeem the bonds — are fully under its control.

The interest accrued on these bonds will not be callable but rather cumulative. However, the IBERDROLA Group will be obliged to settle the interest accrued in the event it distributes dividends.

Total interest paid in 2022 and 2021 amounted to EUR 169 million and EUR 94 million, respectively. Meanwhile, interest accrued in 2022 and 2021 amounted to EUR 169 million and EUR 155 million, respectively, as recognised under “Other reserves” in the consolidated Statement of financial position.

The IBERDROLA Group had outstanding subordinated perpetual bonds worth EUR 8,250 million at 31 December 2022 and 2021.
Valuation adjustments

Treasury shares

The IBERDROLA Group buys and sells treasury shares in accordance with the prevailing law and the resolutions of the General Shareholders’ Meeting. Such transactions include purchases and sales of the Company’s shares and derivatives thereon.

At 31 December 2022 and 2021 the balances of the various instruments are as follows:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Treasury shares held by IBERDROLA</td>

</tbody>
</table>

(1) Shares received.
(2) Includes awards to employees.

SCOTTISH POWER’s treasury shares correspond to the matching shares held by the trust in the share plan called Share Incentive Plan (Note 22.1).

In 2022 and 2021, treasury shares held by the IBERDROLA Group were always below the relevant legal limits.
(b) Physically settled derivatives

The IBERDROLA Group recognises these transactions directly in equity under the “Treasury shares” heading and records the obligation to purchase said shares under the “Bank borrowings, bonds and other marketable securities” heading in current liabilities of the consolidated Statement of financial position.

– Total return swaps

The IBERDROLA Group has swaps on treasury shares in which it pays the financial institution the 3-month Euribor plus a spread on the underlying notional amount and receives the corresponding dividends on the shares paid out to the financial institution over the life of the contract. On the expiration date IBERDROLA will buy the shares at the strike price set out in the contract.

The characteristics of these contracts at 31 December 2022 and 2021 are as follows:

<table>
<thead>
<tr>
<th></th>
<th>No. of shares at 31.12.2022</th>
<th>Strike price</th>
<th>Expiry date</th>

– Treasury share accumulators

The IBERDROLA Group holds several purchase accumulators on treasury shares. These accumulators are obligations to buy in the future, with a notional amount of zero on the start date. The number of shares to be accumulated depends on the market price quoted on a range of observation dates throughout the life of the options — in this case, on a daily basis. A strike price is set, and a knockout level above which the structured product is “knocked out” and shares are no longer accumulated.

The accumulation mechanism is as follows:

– when the spot price is below the strike price, two units of the underlying security are accumulated;

– when the spot price is between the strike price and the knockout level, only one unit of the underlying security is accumulated; and

– when the spot price is above the knockout level, no shares are accumulated.
The characteristics of these contracts at 31 December 2022 and 2021 are as follows:

<table>
<thead>
<tr>
<th></th>
<th>No. of shares</th>
<th>Average price in the period</th>
<th>Expiry date</th>
<th>Millions of euros</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>2022</strong></td>
<td></td>

<td>253</td>
</tr>
<tr>
<td>Potential maximum (1)</td>
<td>64,452,306</td>
<td>9.9309</td>
<td>28/03/2023 to 12/06/2023</td>
<td>640</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th></th>
<th>No. of shares</th>
<th>Average price in the period</th>
<th>Expiry date</th>
<th>Millions of euros</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>2021</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Exercised</td>
<td>45,085,032</td>
<td>10.3230</td>
<td>16/02/2022 to 18/08/2022</td>
<td>465</td>
</tr>
<tr>
<td>Potential maximum (1)</td>
<td>47,036,224</td>
<td>9.8289</td>
<td>16/02/2022 to 18/08/2022</td>
<td>462</td>
</tr>
</tbody>
</table>

(1) Maximum number of additional shares that could accumulate under the mechanism described above through to the maturity of the structures (assuming that the spot price over the remaining life of the structure remains below the strike price at all times).

- **Sold put with physical settlement**

The IBERDROLA Group has sold put options on treasury shares that grant the counterparty the option to sell these shares on the expiry date at the strike price set in the contract.

At 31 December 2021 there were no outstanding contracts, while the characteristics of these contracts at 31 December 2022 were as follows:

<table>
<thead>
<tr>
<th></th>
<th>No. of shares</th>
<th>Average price in the period</th>
<th>Expiry date</th>
<th>Millions of euros (1)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Put options sold</td>
<td>11,338,853</td>
<td>10.2663</td>
<td>10/03/2023 to 24/03/2023</td>
<td>115</td>
</tr>
</tbody>
</table>

(1) The amount is presented net of the premiums collected of EUR 2 million.

**Distribution of dividends charged to 2022 profit**

The Board of Directors of IBERDROLA has agreed to propose to the General Shareholders’ Meeting the payment, out of earnings for 2022 and retained earnings from previous years, a dividend the aggregate gross amount of which will be equal to the sum of the following amounts:

(a) the EUR 235 million that was paid out as an interim dividend for 2022 on 31 January 2023 to the holders of 1,305,893,982 IBERDROLA shares who chose to receive their remuneration in cash under the second application of the optional "Iberdrola Retribución Flexible" optional dividend system for 2022 and therefore received EUR 0.18, gross, per share (the Interim Dividend); and

(b) the amount to be determined by multiplying:

(i) the gross amount per share that the Company will pay out as final dividends for 2022 under the framework of the first-time application of the Iberdrola Flexible Remuneración optional dividend system (Final Dividend) for 2023; by

(ii) the total number of shares upon which the holders have opted to receive the Final Dividend within the framework of the first application of the "Iberdrola Retribución Flexible" optional dividend system for 2023.
As at the date of authorisation of these consolidated Financial Statements, it is not possible to determine the amount of the Final dividend or, consequently, the amount of the dividend chargeable to 2022 earnings.

The Final dividend will be paid in tandem with a scrip issue that the Board of Directors will propose at the General Shareholders’ Meeting, to offer the shareholders the possibility of receiving their remuneration in cash (through the payment of the Final dividend) or in newly issued shares of the Company (through the aforementioned capital increase).

The payment of the Final dividend will be one of the alternatives that the shareholder may choose between when receiving their remuneration within the scope of the first settlement of the Iberdrola Retribución Flexible optional dividend system for 2023, which will be carried out via the aforementioned capital increase.

Subject to shareholder approval at the General Shareholders’ Meeting of the resolutions relating to the "Iberdrola Retribución Flexible" optional dividend system for 2023, the gross amount of the Final dividend is estimated to be at least EUR 0.31 per share. The final amount of the Final dividend will be disclosed as soon as the Board of Directors (or the body to which it delegates this power) makes its decision in accordance with the terms of the dividend distribution and capital increase resolution that the Board of Directors will propose to the shareholders at the General Shareholders’ Meeting in relation to the "Iberdrola Retribución Flexible" optional dividend system for 2023. Additionally, once the first implementation of the "Iberdrola Retribución Flexible" optional dividend system for 2023 is completed, the Board of Directors (with express authority to sub-delegate) will specify the aforementioned distribution proposal and determine the final amount of the dividend and the amount to be allocated to retained earnings.

### 22. LONG-TERM COMPENSATION PLANS

#### 22.1 Share-based long-term compensation plans

**Share-based long-term compensation plans in the settlement period**

The main features of the plans are as follows:

<table>
<thead>
<tr>
<th>Long-term compensation programme</th>
<th>Settled in shares</th>
<th>Measuremnt period</th>
<th>Settlement period</th>
<th>Maximum number of beneficiaries</th>
<th>Maximum number of shares</th>
<th>Level of achievement</th>
</tr>
</thead>
<tbody>
<tr>
<td>IBERDROLA 2017-2019</td>
<td>IBERDROLA</td>
<td>2017-2019</td>
<td>2020-2022</td>
<td>300</td>
<td>14,000,000</td>
<td>100% [1)</td>
</tr>
<tr>
<td>AVANGRID 2016-2019</td>
<td>Avangrid</td>
<td>2016-2019</td>
<td>2020-2022</td>
<td>80</td>
<td>2,500,000</td>
<td>17.4% [2)</td>
</tr>
</tbody>
</table>

[1) Level of achievement and settlement approved by the Board of Directors of IBERDROLA on the recommendation of the Remuneration Committee. In the first quarter of 2022, the third and last of the annual settlements was completed, with the validity of the fundamentals confirmed.

[2) Degree of fulfilment and settlement approved by the Board of Directors of AVANGRID upon the proposal of the Compensation, Nominating and Corporate Governance Committee (CNCGC). In the first quarter of 2022, the third and last of the annual settlements was completed, with the validity of the fundamentals confirmed.

www.iberdrola.com
The following is the movement of the shares granted in these plans:

<table>
<thead>
<tr>
<th>No. of shares</th>
<th>IBERDROLA 2017-2019</th>
<th>AVANGRID 2016-2019 (2)</th>
</tr>
</thead>
<tbody>
<tr>

<td>—</td>
</tr>
</tbody>
</table>

(1) These shares include those delivered to executive directors (Note 46) and to senior management (Note 48).

(2) Taxes charged on shares delivered to senior management: EUR 4.2 million and EUR 3.9 million relating to the second and third delivery of the 2017-2019 Strategic Bonus, respectively.

(3) In addition, under the scope of AVANGRID’s Omnibus Plan — the general plan that establishes the governance framework for executive remuneration plans in cash and shares — a total of 161,920 notional shares (Phantom Share Units) were granted in 2021 and 9,000 notional shares in 2020, with the equivalent value of 51,317 shares settled in cash in 2021 and of 38,598 shares in 2022, thus bringing the outstanding balance at 31 December 2022 to 6,750 notional shares to be settled in 2023 and 2024.

In relation to the long-term share-based compensation plans described above, the change in the “Other reserves” heading of the consolidated Statement of financial position is as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>Iberdrola Strategic bonus 2017-2019</th>
<th>AVANGRID Strategic bonus 2016-2019 (1)</th>

(1) Submitted for 100%. (1) Submitted for 100%. Non-controlling interests account for 18.5%.

Share-based long-term compensation plans in the measurement period

The key features of the plans are as follows:
The reference metrics for the global performance evaluation over the assessment period are similar under the above plans, through adapted to each company:

<table>
<thead>
<tr>
<th>Achievement targets related to</th>
<th>Type of target</th>
<th>Relative weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consolidated net profit</td>
<td>Performance</td>
<td>30% - 35%</td>
</tr>
<tr>
<td>Total shareholder return</td>
<td>Market</td>
<td>20% - 35%</td>
</tr>
<tr>
<td>Financial strength</td>
<td>Performance</td>
<td>20%</td>
</tr>
<tr>
<td>Sustainable Development Goals</td>
<td>Performance</td>
<td>30%</td>
</tr>
</tbody>
</table>

The “Personnel expenses” heading of the consolidated Income statement for 2022 and 2021 includes EUR 60 million and EUR 59 million under the aforementioned long-term share-based compensation plans in the measurement period, as recognised and credited to “Other reserves” of the consolidated Statement of financial position and broken down as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>2022</th>
<th>2021</th>
</tr>
</thead>
<tbody>
<tr>
<td>IBERDROLA 2020-2022</td>

<tr>
<td>Shares acquired with company contribution (matching shares) with a term shorter than 3 years in 2022</td>
</tr>
<tr>
<td>Total balance of matching shares at 31.12.2022</td>
</tr>
</tbody>
</table>

The “Personnel expenses” heading of the consolidated Income statement for 2022 and 2021 includes EUR 3 million and EUR 3 million for these plans, respectively, as credited to the “Other reserves” heading of the consolidated Statement of financial position.

Furthermore, in 2022 and 2021 payments for options and shares were made in the amount of EUR 2 million and EUR 3 million, respectively.
22.2 Cash-based long-term compensation plans

The key features of the long-term cash-based plans currently in the settlement period are summarised below.

<table>
<thead>
<tr>
<th>Long-term incentive</th>
<th>Measurement period</th>
<th>Settlement period</th>
<th>Maximum number of beneficiaries</th>
<th>Maximum cash amount</th>
<th>Level of achievement</th>
</tr>
</thead>
<tbody>
<tr>
<td>2017-2019 IBERDROLA DISTRIBUCIÓN ELÉCTRICA</td>
<td>2017-2019</td>
<td>2020-2022</td>
<td>12</td>
<td>—</td>
<td>100% (1)</td>
</tr>
<tr>
<td>2018-2019 NEOENERGIA</td>
<td>2018-2019</td>
<td>2020-2022</td>
<td>100</td>
<td>BRL 50 million</td>
<td>97.64% (2)</td>
</tr>
</tbody>
</table>

(1) Degree of compliance and settlement approved by the Board of Directors of i-DE REDES ELÉCTRICAS INTELIGENTES, formerly IBERDROLA DISTRIBUCIÓN ELÉCTRICA.

(2) Level of achievement and settlement approved by the Board of Directors of NEOENERGIA on the recommendation of the Remuneration Committee.

The “Personnel expenses” heading of the consolidated Income statement for 2022 and 2021 includes EUR 2 million and EUR 3 million, respectively.

The third and second of the three annual payments resulted in the delivery of EUR 6 million and EUR 6 million in 2022 and 2021, respectively.

23. EQUITY INSTRUMENTS HAVING THE SUBSTANCE OF A FINANCIAL LIABILITY

In the United States, the IBERDROLA Group has signed several contracts that have brought in third parties as non-controlling interests at some of its wind farms, primarily in exchange for cash and other financial assets.

The main characteristics of these contracts are as follows:

- The IBERDROLA Group retains the control and management of the wind farms, regardless of the interest acquired by the non-controlling interests. Accordingly, they are fully consolidated in these consolidated Financial Statements.

- The non-controlling interests have the right to a substantial portion of the profits and tax credits generated by these wind farms up to the return level established at the beginning of the contract.

- The non-controlling interests remain in the equity of the wind farms until they achieve the stipulated returns.

- Once these returns have been obtained, the non-controlling interests must renounce their stake in the wind farms, thus losing their right to the profits and tax credits generated.
- Whether or not the non-controlling interests of the IBERDROLA Group obtain the agreed upon returns depends on the economic performance of the wind farms. Although the IBERDROLA Group is obliged to operate and maintain these facilities in an efficient manner and to take out the appropriate insurance policies, it is not obliged to deliver cash to the non-controlling interests over and above the aforementioned profits and tax credits.

Following an analysis of the economic substance of these agreements, the IBERDROLA Group classifies the consideration received at the outset of the transaction under the “Non-current equity instruments having the substance of a financial liability” and “Current equity instruments having the substance of a financial liability” headings of the consolidated Statement of financial position. Subsequently, this consideration is measured at amortised cost.

At 31 December 2022 and 2021, the amount shown in this heading accrued an average interest in USD of 6.88% and 6.58% respectively.

Changes in this heading of the consolidated Statement of financial position for 2022 and 2021 are as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>2022</th>
<th>2021</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opening balance</td>
<td>625</td>
<td>391</td>

<td><strong>625</strong></td>
</tr>
</tbody>
</table>

The IBERDROLA Group signed new contracts in 2022 through its subsidiaries in the United States, for the construction of the Lund Hill solar plant and the expansion of the Aeolus VIII wind farm. The amounts payable under these contracts were not fully disbursed in 2022.

In financial year 2021, it also signed contracts for Aeolus VII and Aeolus VIII through its United States subsidiaries.
24. CAPITAL GRANTS

The change in this heading of the consolidated Statement of financial position for 2022 and 2021 is as follows (Note 3.n):

<table>
<thead>

<td>1,619</td>
</tr>
</tbody>
</table>

Each year the IBERDROLA Group estimates, based on an independent actuarial report, the payments for pensions and similar benefits that it will have to meet in the following financial year. These are recognised as current liabilities in the consolidated Statement of financial position.

26.a) Defined benefit plans and other non-current employee benefits

Spain

The IBERDROLA Group’s main commitments to providing defined benefits for its employees in Spain, in addition to those provided by Social Security, are as follows:

- Employees subject to the IBERDROLA Group’s Collective Bargaining Agreement who retired before 9 October 1996 are covered by a defined benefit retirement pension scheme, the actuarial value of which was fully externalised at 31 December 2022 and 2021.

The IBERDROLA Group has no liability of any kind for this segment of employees and has no claim on any potential excess generated in the assets of this plan above and beyond the defined benefits.
Also, in relation to serving employees and employees who have retired after 1996 and are subject to the IBERDROLA Group’s Collective Bargaining Agreement and members/beneficiaries of the Iberdrola Pension Plan, risk benefits (e.g. widowhood, permanent disability or orphanhood) which guarantee a defined benefit at the time the event giving rise to such benefits occurs, are instrumented through a multi-year insurance policy. The guaranteed benefit consists of the difference between the present actuarial value of the above mentioned defined benefit at the time of the event and the member’s vested rights at the time the event was processed, if the latter were lower. The premiums on the insurance policy for 2022 and 2021 are recognised under “Personnel expenses” in the consolidated Income statement and amounted to EUR 8 million and EUR 10 million, respectively.

The IBERDROLA Group also maintains a provision to cover certain commitments with its employees other than those indicated above. These further commitments are covered by internal funds linked to social security benefits, consisting mainly of free electricity supply, with an annual consumption limit, for retired employees and other long-term benefits, primarily consisting of a long-service bonus for active employees at 10, 20 and 30 years of service.

United Kingdom (SCOTTISH POWER)

SCOTTISH POWER employees residing in the United Kingdom, hired before 1 April 2006, are covered by the following defined benefit retirement pension schemes: ScottishPower Pension Scheme (SPPS) and Manweb Group of Electricity Supply Pension Scheme (Manweb).

One-off capital sums have been offered to pensioners and deferred beneficiaries, reducing the defined benefit burden.

United States (AVANGRID)

The Networks business has a number of defined-benefit company pension plans, both for employees covered by collective bargaining agreements and those not covered thereunder, where the contribution is paid by the company, with benefits based on salary, years of service and/or a fixed “multiplier”. Effective 1 January 2014, all the corporate defined benefit retirement plans were closed to new entrants with the exception of “The Berkshire Gas Company Pension Plan”, “Connecticut Natural Gas Corporation Pension Plan”, and “Southern Connecticut Gas Company Pension Plan for Salaried and Certain Other Employees”. These plans were closed to new affiliates with effect from 1 January 2018. Meanwhile, with effect from 31 December 2020, past service benefits were frozen for affiliates of the “United Illuminating Company Pension Plan”. With effect from 30 June 2021, past service benefits were frozen for affiliates of the “The Southern Connecticut Gas Company Pension Plan”. With effect from 31 July 2021, past service benefits were frozen for SCG affiliates of the “The Southern Connecticut Gas Company Pension Plan for Salaried and Certain Other Employees”.

www.iberdrola.com
With effect from 30 June 2022, past service benefits were frozen for affiliates of the “CNG Pension Plan B” and affiliates of all pension plans not covered by collective agreements. With effect from 31 August 2022, past service benefits were frozen for RGE affiliates of the “NYSEG and RGE Pension Plan”. Several pension plan mergers have taken place with effect from 1 January 2023, reducing the total number of pension plans from 12 to seven. In addition, effective 31 March 2023, the “CNG Retirement Pension Plan (Hartford Union)” will be frozen.

The Renewables business has a defined benefit company pension plan, where the Company makes contributions, with benefits based on salary and years of service. Past services under this scheme were frozen with effect from 30 April 2011.

One-off capital sums have been offered to pensioners and deferred beneficiaries, reducing the defined benefit burden.

In addition, both the Networks business and the Renewables business have defined benefit plans for disability and post-retirement health contingencies.

**Brazil**

On 24 August 2017 NEOENERGIA was acquired through the incorporation of ELEKTRO. ELEKTRO, CELPE, COELBA and COSERN employees are covered by several defined benefit retirement schemes. COELBA employees are also covered by a post-employment health plan.

The takeover of CEB Distribuição was completed on 2 March 2021 (Note 7). CEB Distribuição has been renamed Neoenergia Distribuição Brasília. The distributor Neoenergia Distribuição Brasília operates two defined benefit plans (one of which is frozen).

Defined benefit retirement plans are not available for new incorporations.

**Other commitments with employees**

In addition, some IBERDROLA Group companies have provisions to meet certain commitments with their employees, other than those described above, which are met by in-house pension funds.
The most significant information about pension plans is as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>Spain</th>
<th>United Kingdom</th>
<th>United States</th>
<th>Brazil (¹)</th>
<th>Other</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Present value of the obligation</td>
<td>(299)</td>
<td>(424)</td>
<td>(3,621)</td>
<td>(5,931)</td>
<td>(2,621)</td>
<td>(3,505)</td>
</tr>
<tr>
<td>Fair value of plan assets</td>
<td>—</td>
<td>—</td>
<td>3,893</td>
<td>6,118</td>

</tbody>
</table>

(1) As the surplus was not recognised, the actuarial differences recognised in reserves were adjusted upwards in 2022 and 2021 by EUR 1 and EUR 20 million, respectively, under the terms of the current standard IFRIC 14: “IAS 19 — The Limit on a Defined Benefit Asset, Minimum Funding Requirements and their Interaction”. Moreover, in 2022 and 2021, and for the same concept, the finance expenses recognised were raised by EUR 2 million and EUR 3 million, respectively.
The changes in the fair value of plan assets in 2022 and 2021 are as follows:

<table>
<thead>
<tr>
<th>Million of euros</th>
<th>United Kingdom</th>
<th>United States</th>

</table>
The strategic distribution of pension plans investments is supported by periodic specific Asset Liability Management studies for each of the plans. This guarantees the match with the funding policy and the expected time to fully finance the commitment in accordance with flows resulting therefrom. Those studies provide the level of sensitivity to the different expected return rates of assets and discount of obligations. It also guarantees that plans are adequately funded while recovering regulated cash flows. There are also prudential investment rules applicable to pensions within the scope of the Group.

Assets managed at global level have been progressively switched to passive management. Provisions for death and permanent disability have been covered with pension plans through insurance policies and managing entities and investment assets have been qualified through independent third parties, resulting in investments with lower liquidity. Additionally, in the United Kingdom, longevity risk has been hedged through the use of swaps and inflation risk has been partially hedged.

26.b) Defined contribution plans

Active employees of IBERDROLA and employees who have retired after 9 October 1996, who are members of the IBERDROLA pension plan with joint sponsors, are covered by an occupational, defined-contribution retirement pension system independent of the Social Security system.

In accordance with this system and IBERDROLA's Collective Bargaining Agreement, the periodic contribution to be made is calculated as a percentage of the annual pensionable salary of each employee, except for employees joining the Company after 9 October 1996, who are subject from 1 January 2022 to a contributory system where the Company pays 70% and the employee 30% (from 1 January 2021, 67.5% paid by the Company and 32.5% by the employee). For those hired after 20 July 2015 the company pays 1/3 and the employee 2/3 of the total contribution, until the date on which the employee joins the Base Salary Rating (BSR), at which point the same criterion as for employees joining after 9 October 1996 will apply. The Company finances these contributions for all of its current employees.

The IBERDROLA Group's contributions in 2022 and 2021 were EUR 22 and EUR 22 million, respectively, and are recognised under the “Personnel expenses” heading of the consolidated Income statement.

The contribution made on behalf of employees not covered by the Collective Bargaining Agreement in 2022 and 2021, as recognised under the “Personnel expenses” heading of the consolidated Income statement, is shown below.

<table>

www.iberdrola.com
26.c) Restructuring plans

Given the interest shown by some of the employees in requesting early retirement, IBERDROLA Group has offered these employees the mutually agreed termination of the employment relationship, thus carrying out a process of individual termination contracts in Spain. At 31 December 2022 and 2021, the existing provisions in this regard pertain to the following restructuring plans:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Provisions</td>
<td>No. of individual contracts</td>
</tr>
<tr>
<td>2012 restructuring plan</td>
<td>—</td>
<td>—</td>

</tr>
<tr>
<td>2021 restructuring plan</td>
<td>59</td>
<td>212</td>
</tr>
<tr>
<td>Total</td>
<td>125</td>
<td>699</td>
</tr>
</tbody>
</table>

In addition, the following provisions had been posted at 31 December 2022 and 2021 to honour these commitments outside Spain and for the subsidiary company Iberdrola Ingeniería y Construcción, S.A.U. (IIC):

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>SCOTTISH POWER</td>
<td>4</td>
<td>6</td>
</tr>
<tr>
<td>IIC</td>
<td>7</td>
<td>10</td>
</tr>
<tr>
<td>Total</td>
<td>11</td>
<td>16</td>
</tr>
</tbody>
</table>

The discount to present value of the provisions is charged under the heading “Finance expense” heading of the consolidated Income statement.

The change in provisions for the commitments detailed in the previous section in 2022 and 2021 is as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>2022</th>
<th>2021</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opening balance</td>
<td>206</td>
<td>179</td>
</tr>
<tr>
<td>Charge (Note 39)</td>
<td>6</td>
<td>86</td>
</tr>
<tr>

</tr>
<tr>
<td>Payments</td>
<td>(65)</td>
<td>(57)</td>
</tr>
<tr>
<td>Closing balance</td>
<td>136</td>
<td>206</td>
</tr>
</tbody>
</table>

The main assumptions applied in the actuarial reports drawn up to determine the provisions needed to meet the Group’s commitments under the aforementioned restructuring plans at 31 December 2022 and 2021 are as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Discount rate</th>
<th>Inflation</th>
</tr>
</thead>
<tbody>
<tr>
<td>2022</td>
<td>3.13% - 3.26%</td>
<td>1.00% - 0.70%</td>
</tr>
<tr>
<td>2021</td>
<td>0% - 0.06%</td>
<td>1.00% - 0.70%</td>
</tr>
</tbody>
</table>
27. OTHER PROVISIONS

The movement and breakdown of “Other provisions” on the liabilities side of the consolidated Statement of financial position in 2022 and 2021 is as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>Provisions for litigation, indemnity payments and similar costs</th>
<th>Provision for CO₂ emissions</th>
<th>Provision for facility closure costs (Notes 3.r y 5)</th>

</tr>
</tbody>
</table>

In addition, the IBERDROLA Group has provisions for responsibilities arising from litigation in progress and from indemnity payments, obligations, collateral and other similar guarantees, and those aimed at covering environmental risks. The latter have been determined using a case-by-case analysis of the polluted assets status and the cost that will have to be incurred in cleaning them.

The IBERDROLA Group also maintains provisions to meet a series of costs needed for decommissioning at its nuclear and thermal power plants, its wind farms, and at other facilities.
The cost arising from decommissioning obligations is recalculated on a regular basis to incorporate how reasonable future cost estimates may be on past decommissioning carried out, or to include new bylaw or regulatory requirements.

The detail of provision for plants closure costs is as follows:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Nuclear power plants</td>
<td>565</td>
<td>689</td>
</tr>
<tr>
<td>Wind-powered farms and other alternative stations</td>
<td>1,181</td>
<td>1,727</td>
</tr>
<tr>
<td>Combined cycle power plants</td>
<td>172</td>
<td>244</td>
</tr>
<tr>
<td>Thermal power plants</td>
<td>38</td>
<td>52</td>
</tr>
<tr>
<td>Other facilities</td>
<td>101</td>
<td>127</td>
</tr>
<tr>
<td>Right-of-use assets</td>
<td>15</td>
<td>21</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>2,072</strong></td>
<td><strong>2,860</strong></td>
</tr>
</tbody>
</table>

The amount related to nuclear plants covers the costs which the plant operator will incur from the end of its useful life until ENRESA (Note 3.y) takes control of them.

The discount rates (minimum and maximum range) before taxes of the main countries in which the IBERDROLA Group operates used in the present value of the operating provisions are as follows:

<table>
<thead>
<tr>
<th>Country</th>
<th>Currency</th>
<th>Discount rate 2022</th>
<th>Discount rate 2021</th>
</tr>
</thead>
<tbody>
<tr>

(*) At 31 December 2022, the balance includes EUR 4,216 million corresponding to domestic commercial paper (USCP) and Euro Commercial Paper (ECP) issues as well as EUR 33 million of drawdowns under credit lines and facilities.

The average balance under the domestic commercial paper (USCP) and Euro Commercial Paper (ECP) programme amounted to EUR 4,121 million and EUR 3,313 million, respectively, in 2022 and 2021.
The structure of bank borrowings, bonds and other marketable securities at 31 December 2022 and 2021, once the corresponding interest rate hedges are considered, is as follows:

### Bank borrowings, bonds and other marketable securities at 31 December 2021 maturing in

(*) At 31 December 2021, the balance included EUR 3,566 million of domestic commercial paper (USCP) and Euro Commercial Paper (ECP) issues. At 31 December 2021 there were EUR 156 million of drawdowns under credit lines and facilities.

At 31 December 2022 and 2021, the IBERDROLA Group was fully up to date on all its financial debt payments and there had been no circumstances affecting the change of control or adverse changes in its credit quality, and consequently it had not been necessary to meet the early maturity of the debt or modify the cost related to the loans of which it is the holder.

The average cost of debt of the IBERDROLA Group in 2022 and 2021 was 4.14% and 3.24%, respectively.

The breakdown by maturity of future unaccrued interest payment commitments at 31 December 2022 and 2021, after factoring in the effect of exchange rate and interest rate hedges and considering that the prevailing interest rates and exchange rates remain constant through to maturity, is as follows:
Significant transactions carried out by the IBERDROLA Group during 2022 are as follows:

(1) 6 options to extend for 6 months.

Certain Group investment projects, mainly related to renewable energies, have been financed specifically through loans that include covenants such as the compliance with certain financial ratios or the obligation to pledge in benefit of creditors the shares of the project-companies (Note 45). The outstanding balance of this loan type at 31 December 2022 and 2021 was EUR 1,089 million and EUR 776 million, respectively. These loans also require that a deposit be set aside for the fulfilment of obligations under the loan agreements. If the ratios are not met and/or the security deposit does not reach the agreed amount, it is impossible to distribute dividends in the year in which they are not met.
With respect to the clauses relating to credit ratings, the IBERDROLA Group had arranged financial transactions with the EIB, ICO and EKF at 31 December 2022 and 2021 amounting to EUR 5,000 million and EUR 4,123 million, respectively. These arrangements would require renegotiation of their cost or additional guarantees in the event of a rating downgrade (if such a downgrade were to occur in the manner set out in each contract).

At 31 December 2022 and 2021, the IBERDROLA Group had also drawn on loans and credits totalling EUR 620 million and EUR 500 million, respectively, the cost of which would be revised were its credit rating to drop. However, the increase in cost would not be significant in either case.

In addition, at 31 December 2022 there were bonds issued, borrowings and other agreements between financial institutions and the IBERDROLA Group whose maturity dates could be impacted or may require additional collateral or guarantees to those already existing should a control change take place in the manner and subject to the timeframes stipulated in each contract. The most significant changes are those described in the following paragraphs:

- Bond issues amounting to EUR 12,053 million in the European market and USD 350 million (equivalent to EUR 329 million) in the US market.
- EIB and ICO loans for a combined total of EUR 4,476 million.
- Bank and ECA borrowings amounting to EUR 2,430 million and USD 900 million (equivalent to EUR 846 million).
- Lastly, BRL 14,707 million (equivalent to EUR 2,621 million) from issuances and BRL 26,713 million (equivalent to EUR 4,761 million) from loans to Brazilian subsidiary NEOENERGIA and its subsidiaries.
29 DERIVATIVE FINANCIAL INSTRUMENTS

The breakdown of balances at 31 December 2022 and 2021, including valuation of derivative financial instruments at those dates, is as follows:

(1) Includes the derivatives arranged by the IBERDROLA Group at December 2022 to cover the interest rate risk of future financing for a nominal amount of EUR 4,449 million, thus helping to mitigate interest rate risk (EUR 4,216 million at 31 December 2021).

The information presented in the table above includes notional amounts of derivative financial instruments arranged in absolute terms (without offsetting assets and liabilities or purchase and sale positions). This does not reflect the risk assumed by the IBERDROLA Group since this amount only records the basis on which the calculations to settle the derivative are made.

The “Finance expense” heading of the 2022 and 2021 consolidated Income statements includes EUR 477 million and EUR 152 million, respectively, in connection with derivatives linked to financial indices that fail to meet the conditions to qualify as hedging instruments or, having met the conditions, but as explained in Notes 3.1 and 43, are partially ineffective. In addition, the “Finance income” heading in the consolidated Income statements for those years includes EUR 238 million and EUR 81 million, respectively, for the items described above (Note 42).
The nominal value of bank borrowings, bonds and other marketable securities subject to exchange rate hedging (Note 4) is as follows:

<tr>
<td><strong>Total</strong></td>
<td>3,554</td>
<td>3,444</td>
</tr>
</tbody>
</table>

www.iberdrola.com
Furthermore, the IBERDROLA Group is potentially exposed to future cash outflows that are not reflected in the lease liability measurement mainly due to variable lease payment commitments. During 2022 and 2021, the IBERDROLA Group accrued an amount of EUR 40 and 31 million for variable lease recognised under the “External services” heading of the consolidated Income statement. Said amounts correspond mainly to lease rents depending on output and operating income from wind farms located in leased lands.

Expenses in 2022 related to current leases excluded from the scope of IFRS 16 amounted to EUR 17 million, as recognised under “External services” in the consolidated Income statement (EUR 10 million in 2021).

There was no income from subleasing of the rights of use of assets in 2022 (EUR 1 million in 2021).

Operating lessor

The IBERDROLA Group acts as lessor under certain operating leases consisting essentially of the rental of investment property (Note 10) and items of property, plant and equipment. The breakdown by type is as follows:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Buildings</td>
<td>253</td>
<td>256</td>
</tr>
<tr>
<td>Land</td>

</tr>
<tr>
<td>Other</td>
<td>24</td>
<td>27</td>
</tr>
<tr>
<td>Total</td>
<td>384</td>
<td>389</td>
</tr>
</tbody>
</table>

The “Revenue” and “Other operating income” headings of the consolidated Income statement for 2022 include EUR 23 and 16 million, respectively (EUR 20 and 13 million, respectively, in 2021).

The estimate of non-deducted future minimum payments for contracts in force at 31 December 2022 and 2021 is as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>31.12.2022</th>

</tbody>
</table>

(*) This item includes the collateral required for the operation of the business in the markets (see Note 15.b).

The IBERDROLA Group manages a series of loan arrangements for certain suppliers to enable the latter to settle their invoices early with a bank. This is a form of reverse factoring with the purpose of providing financing services through which suppliers can collect from a bank prior to the due date of the invoices issued to the IBERDROLA Group. Under these arrangements, the IBERDROLA Group has no economic interest in suppliers entering into reverse factoring or in a direct financial relationship with the bank. The IBERDROLA Group’s obligations to its suppliers, including the amounts owed and the agreed payment terms and conditions are not affected by the suppliers’ decision to choose to bring forward collection under these arrangements.

In 2022 and 2021, the IBERDROLA Group negotiated the extension of payment periods with certain suppliers (mainly in respect of PP&E) with which the relevant IBERDROLA Group companies operate. The average payment period for these suppliers has been extended for approximately 180 days. These suppliers may choose to receive payment from a bank prior to the due date by virtue of the supplier financing arrangements described above.

www.iberdrola.com
The IBERDROLA Group has determined suppliers’ use of these financing arrangements have not discharged or substantially modified the original liabilities. Accordingly, the balances are still classified as “Other current financial liabilities — Suppliers of fixed assets” and “Trade payables” in the consolidated Statement of financial position. The cash flows associated with these payments are included in the Cash flows from investing and from operating activities, respectively, in the consolidated Statement of cash flows.

As at 31 December 2022 and 2021, the amount under reverse factoring agreements amounted to EUR 586 million and EUR 637 million, mainly recognised under "Other current financial liabilities — Suppliers of fixed assets" in the consolidated Statement of financial position.

34. DEFERRED TAXES AND INCOME TAX

Income tax

Due to the multinational nature of the IBERDROLA Group, it is subject to the regulations in force in other tax jurisdictions.

Taxes in Spain

Iberdrola S.A. is the parent company of two tax consolidation groups in Spain: group 2/86 for the whole of Spain and group 02415BSC in Biscay. Up until 2019, Iberdrola S.A. was part of the former, but became part of the latter in 2020 due to legislative changes affecting the Company at individual level.

www.iberdrola.com
The 2/86 group is formed by 98 companies, whereas the 02415BSC group is formed by 24 companies.

The other entities that are tax residents in Spain and which are not incorporated into these two groups pay income tax on an individual basis.

Companies taxed under the common tax system were subject to a 25% rate in 2022, while in the fiscally autonomous Basque Country, it was 24%.

Taxation in other countries

Other Group companies whose tax residence is outside Spain are taxed based on the income tax rate applicable in their resident jurisdiction. In the United States, company taxation is based on a consolidated tax system, where there is a federal tax group, and joint or consolidated taxation as a tax group also operating in certain states. In the United Kingdom the group payment arrangement mechanism is used. In France, Australia, Italy, Portugal and Romania, tax is paid in 2022 also under a regime of tax consolidation for entities that meet the requirements. In other tax jurisdictions, Group companies are subject to taxes under the individual tax regime.
Nominal tax rates applicable in the main jurisdictions in which the IBERDROLA Group operates are as follows (OECD figures, including the federal/general rate and, as applicable, the state/local rate):

<table>

</tbody>
</table>

(a) Includes, in 2022 and 2021, adjustments arising from the exemption of dividends and share of profit received and the transfer of interests; from the application of tax credit in the tax base in certain jurisdictions; and from the deductibility of impairment on equity instruments and other accounting expenses.

(b) The most significant impact in 2022 was due to the reverse merger of Neoenergia Distribuição Brasília (BRASILIA) and its shareholder Bahia PCH III, whereby the excess price paid in the acquisition of Neoenergia Brasilia became deductible in Brazil. As a result, the related portion of the deferred tax liability generated in the Neoenergia Brasilia business combination in the amount of EUR 126 million has been reversed (Note 7). The most relevant impact in financial year 2021 was the tax rate adjustments in the United Kingdom amounting to EUR 508 million.

The breakdown between current and deferred income tax is as follows:

<table>

Administrative proceedings

Among its principles, IBERDROLA seeks to build stronger ties with the tax authorities, based on the respect for the law, loyalty, trust, professionalism, collaboration, reciprocation and good faith, notwithstanding any legitimate disputes that may arise due to the interpretation of tax rules. When such disputes do arise, IBERDROLA strives to ensure cooperative dealings with the authorities, in accordance with the principles of transparency and mutual trust.

All IBERDROLA actions have been analysed by its internal and external advisers, both for this year and for preceding years, and these advisers have determined that these actions have been carried out in accordance with the Law and are based on the reasonable interpretation of tax law. The existence of contingent liabilities is also scrutinised. IBERDROLA's general approach is to recognise provisions for tax litigation when it is likely that IBERDROLA will be handed an unfavourable decision or ruling, while no recognition is required when the risk is possible or remote.

Undergoing tax inspections at reporting date in 2022 depend on the tax law applicable in each country, but no material impacts arising therefrom not included in these Financial Statements are expected.

Administrative proceedings in Spain

In June 2020, the Spanish tax authority (AEAT) instigated a partial tax inspection (for the years 2012 to 2014) and a general tax inspection (for the years 2015 to 2017) for the main corporate taxes applicable to IBERDROLA Group companies in the consolidated tax group for Spain (no. 2/86). The inspections were subsequently extended to financial years 2018 to 2020, also on a partial basis, in order to carry out the full adjustment of certain contested topics from previous financial years.

In 2021, various tax assessments were signed in agreement relating to transfer pricing matters for the period 2012 to 2014, while other assessments were signed in protest relating to other corporate income tax matters (the same as those discussed in the general audit procedure for the years 2008-2011).

In 2022, the verification procedures initiated in June 2020 continued and the remaining settlement proposals and assessments resulting from these procedures were made, some of them settled, some in agreement, and some in protest.

The tax assessments signed in protest in 2022 for Income tax purposes, corresponding to the years 2015 to 2020, have essentially the same adjustments as those disputed in 2021, i.e. those raised in the general inspection procedure for financial years 2008-2011.
With regard to Value Added Tax, the contested tax inspection reports for 2015 to 2017 include disputed adjustments arising from the inclusion in the denominator of the pro rata of the capital gains arising in portfolio transfers or corporate restructuring transactions, and the non-recognition by the tax authorities of the refund of VAT payments relating to unpaid debts mainly by individuals, more than one year old and with a tax base of less than EUR 300, applied for by CURENERÍA and IBERDROLA CLIENTES, S. A. in relation to those years. This request is based on the view that Spanish rules on VAT due on unpaid invoices are contrary to Community law.

On 17 December 2021 and 29 July 2022, tax claims was filed with the Central Tax Appeals Board against the settlement agreements derived from the assessments signed in protest discussed in the previous paragraph, which do not entail significant equity impacts for the IBERDROLA Group.

**Administrative proceedings in other countries**

In those countries where the Group has a significant presence, the main ongoing inspections are as follows:

- In the United States the most significant inspection relates to income tax in the State of New York. Additionally, given its nature of large taxpayer, both at federal level and state level, AVANGRID Group has a number of different ongoing tax inspection processes on other taxes.

- In the United Kingdom, HMRC has classified Scottish Power as a low risk taxpayer. The only significant matter under discussion affects the deductibility of certain payments made as required by the electric regulator (OFGEM). The relevant pleadings were submitted in 2021 in relation to the claims brought before the First Tier Tax Tribunal. The Tax Tribunal gave its ruling in February 2022, and disagreeing with it, an appeal was lodged with the Upper Tribunal in May 2022.

- In Mexico, income tax inspections were conducted in 2020 and 2021 by the Mexican tax authority (SAT) against Iberdrola Ingeniería y Construcción SA de CV (2017), Iberdrola Energía Monterrey SA de CV (2017), Iberdrola México SA de CV (2018) and Iberdrola Energía Escobedo SA de CV (2018). In relation to the latter company, the inspection was also extended to sales tax (2018).

As far as the first two procedures are concerned, the corresponding letters of observation were received in the closing months of 2022. At the date of preparation of these financial statements, both companies have applied to the Taxpayer's Ombudsman's Office (Prodecon) to initiate proceedings for a conclusive agreement, which are pending a reply from the SAT.

In the other two proceedings, the aforementioned conclusive agreement procedure has been exhausted, awaiting the SAT’s notification of the settlement notices, which will be challenged by means of an appeal for reversal at first instance.
Lastly, it should be noted that in November and December 2022 the SAT notified the commencement of income tax audits for financial year 2020 to Iberdrola Energía Noroeste SA de CV, Iberdrola Energía Altamira SA de CV and Iberdrola Energía Tamazunchale SA de CV.

- Lastly, Brazil is known for being a jurisdiction with a high risk of litigation and there are multiple investigation actions in progress, given Brazil's tax and administrative structure and the usual procedure followed by the tax authorities. However, these procedures are rarely settled in favour of the tax authorities.

The IBERDROLA Group's directors and their tax consultants consider that the current inspection process will not give rise to further material liabilities for the IBERDROLA Group beyond those already recognised at 31 December 2022.

**Tax litigation**

*Tax litigation in Spain*

In June 2020 IBERDROLA was notified of the rulings of the Central Tax Appeals Board (TEAC) on the appeals lodged in relation to tax assessments disputed in 2016, arising from the general tax inspection of the consolidated tax group in Spain (no. 2/86) for the period 2008 to 2011.

As regards VAT, the TEAC found in favour of IBERDROLA's interests (thus rendering the inspector’s assessments and settlements null and void), but ruled against the Company in its income tax decision.

On 7 July 2020, IBERDROLA filed a contentious-administrative appeal against these income tax rulings with the National High Court (Audiencia Nacional). Throughout 2021, the corresponding submissions were made in the proceedings, and the dates for voting and ruling have not yet been set.

The main adjustments included in the settlement agreements resulting from contested tax assessments related to the quantification of goodwill subject to tax amortisation and depreciation, for the acquisition of SCOTTISH POWER, the elimination of the exemption applicable to SCOTTISH POWER's dividends received, as the Tax Authority considers that this exemption is incompatible with valuation adjustments for net investment hedges, differences in tax consolidation criteria and the possible existence of the circumstances envisaged in Section 15.1 of Spain’s General Tax Law in a debtor-swap operation in a number of debt issues.

Additionally, in December 2020 IBERDROLA was notified of the rulings of the Central Tax Appeals Board (TEAC) on the appeals lodged in relation to the income tax assessments signed in protest arising from the limited tax inspection of the period 2012 to 2014. The dispute with the public administration focuses on the applicability on inapplicability of the temporary imputation standard established in numerous Supreme Court decisions regarding income received by the Group, resulting from payments made based on rules contrary to Law.
This ruling of December 2020 partially upheld IBERDROLA's arguments, accepting its criteria insofar as the taxes declared to be unconstitutional are concerned. On 25 January 2021, IBERDROLA appealed the remaining disputed assessments to the National High Court. Throughout 2021, the corresponding submissions were made in the proceedings, which remains at the present date pending the setting of a date for voting and ruling (Note 44).

Tax litigation in other countries

As a general rule, no significant tax litigation is currently undergoing in the other jurisdictions where the Group operates, except for Brazil, where a large number of litigation and administrative and judicial proceedings are ongoing. The Group considers it probable that the final rulings will be favourable (Note 44).

The IBERDROLA Group's directors and their tax consultants consider that the current inspection process will not give rise to further material liabilities for the IBERDROLA Group beyond those already recognised at 31 December 2022.

Further developments in relation to financial goodwill (Article 12.5 of the consolidated text of the Income Tax Law)

In previous years, the Spanish authorities applied the aid and grants reimbursement procedure envisioned in the General Tax Act, thus recovering from the IBERDROLA Group, in accordance with Section 12.5 of the TRLIS, the sum of EUR 665 million (EUR 576 million in principal and EUR 89 million in late payment interest) in the years 2002 to 2015. IBERDROLA settled the required amount by (i) offsetting part of it against the EUR 363 million received under the 2016 income tax rebate; and (ii) paying EUR 302 million in February 2018. All the foregoing by virtue of Decision Three of the European Commission.

Meanwhile, in May 2021 IBERDROLA received notice of a tax settlement agreement under state aid retrieval proceedings for the years 2016 to 2018 for a total of EUR 13 million, which the Company paid on 2 July 2021.

These amounts were recognised in “Current tax assets” under non-current assets in the consolidated Statement of financial position at 31 December 2022 and 2021. The assets show the amount recoverable from the tax authorities for corporate income tax and late payment interest, as IBERDROLA believes that the payments effectively made exceeded the current tax the recoverability of which is considered probable, subject to the final outcome of the appeals submitted against the three decisions of the European Commission.

Moreover, the application of the incentive provided in Section 12.5 of the TRLIS generated a taxable temporary difference, resulting in the subsequent recognition of the deferred tax liability recognised.

Therefore, if the outcome is ultimately contrary to the Company's interests (something considered unlikely based on the information currently available), the impact on equity would by substantially mitigated.
35. PUBLIC ADMINISTRATION RECEIVABLES AND PAYABLES

The breakdown of the headings “Current tax assets/liabilities” and “Other public administration receivables/payables” on the asset and liability sides, respectively, of the consolidated Statement of financial position is as follows:

<table>

<td>99.85 %</td>
<td>99.88 %</td>
</tr>
</tbody>
</table>

The information shown in the above tables has been prepared in accordance with Law 15/2010 of 5 July, amending Law 3/2004 of 29 December, establishing measures to combat late payments in commercial operations; in accordance with Law 18/2022 of 28 September, on the creation and growth of companies; and in accordance with the Resolution of 29 January 2016 of the Spanish Institute of Accounting and Auditing (Instituto de Contabilidad y Auditoría de Cuentas) on the information to be included in the Notes to the Financial Statements in relation to late payments to suppliers in commercial transactions.

This information has been drawn up on the basis of the following specifications:

- **Paid transactions ratio**: amount in days of the ratio between the sum of the products of each of the transactions paid by the number of payment days, and the total amount of payments made during the year.

- **Outstanding transactions ratio**: amount in days of the ratio between the sum of the amount of the outstanding payment transaction and the number of unpaid days, and the total amount of outstanding payments.

- **Suppliers**: trade payables included in current liabilities in the consolidated Statement of financial position generated from debts of goods or services with suppliers.

- **Property, plant and equipment suppliers and finance lease suppliers** are excluded from this information.

- **Taxes, levies, indemnities and certain other headings** are likewise excluded from this information since they do not qualify as trade transactions.

- **The table below shows information corresponding to Spanish companies included in the consolidated group once the credits and debits between the subsidiary companies are eliminated.**
37. REVENUE

The breakdown of this heading of the consolidated Income statement is as follows:

</table>
The main activities for which IBERDROLA generates ordinary revenue from customer contracts are as follows:

– Electricity and gas transmission and distribution

The IBERDROLA Group’s performance obligation is to make transmission and distribution facilities available to customers. This performance obligation is recognised in a linear manner over time, since the customer receives and consumes simultaneously the benefits from the IBERDROLA Group’s performance insofar the transmission or distribution network is available.
In the countries where IBERDROLA Group operates, the remuneration on transmission and distribution activities is basically determined by the regulated margin recognised by the corresponding regulator. For certain regulated activities carried out by the IBERDROLA Group, any discrepancies between costs estimated when setting the annual tariff and costs actually incurred are recognised as income or expense for the year in which they arise only if its proceed or payment is certain, regardless of future sales (Note 15.b).

– Gas and electricity sales

The amount of electricity and gas sales is recognised as income at the time the energy is delivered to the customer based on the amounts supplied and include an estimated of unbilled supplied energy (Note 5). Where relevant, depending on the applicable legislation in each country, this item includes incentives received to support vulnerable consumers or to mitigate the effects of the energy crisis.

By countries:

– In Spain, income includes the amount of both sales in the gas regulated market at Tariff of Last Resort (TLR) and of electricity at Voluntary Price for the Small Consumer (VPSC) as well as the sales in the liberalised market.

– In the United States and Brazil income from electricity and gas supply to end customers are based on tariffs rates subject to the corresponding state regulatory authorities, which determine the prices and other terms of service through the fixing of rates.

– In the United Kingdom, gas and electricity are traded in the liberalised market.

– In Mexico, electricity energy is supplied at liberalised conditions for consumers with a demand of 1 MW or above.

IBERDROLA Group’s retail supply companies act as principal. Purchase and sale of energy between the Group’s generation and retail supply companies are left out of the consolidation process.

– Assignment of electricity generation capacity

The electricity generation capacity assignment is an obligation independent from electricity supply whose income is recognised through the term of the contract.

IBERDROLA Group maintains electricity generation capacity assignment agreements for some of its plants that set predetermined collection schedules for assigning energy supply capacity. IBERDROLA Group has electricity generation capacity assignment agreements in Mexico for its combined cycle power plant with the Federal Electricity Commission (CFE – Comisión Federal de la Energía). The term of these agreements is 25 years from the date on which each combined cycle plant enters into commercial operation.
– Verification, connection and assignment of use of metering equipment

The registration of customers, income for connecting to the receiving electricity and gas grid, as well as income from the verification of installations, are recognised at the time the actions take place since the customer benefits from the service provided and there is no associated future fulfilment obligation. Income for the right of use of meters is recognised as income throughout the period of use.

– Sale of renewables obligation certificates

In the sale of renewables obligation certificates from the Renewables business associated to supplied energy (joint sale of energy and green certificates), income for the sale is recognised at the time the energy is delivered. When the sale of said certificates takes place separately from the energy produced, the income is recognised at the time the certificate is delivered to the customer.

– Incentives for renewable business

The amount of the turnover of the renewable energy and sustainable generation segment corresponding to the different geographical areas in which the Group operates includes the incentives received according to the applicable legislation in each country, given that the amount of these incentives is granted on an individual basis based on the units of products sold and they are received recurrently.

– Construction contracts

Income from transmission and distribution concession agreements for electric energy that the IBERDROLA Group has executed in Brazil includes two compliance obligations: (1) construction services and (2) subsequent operation and maintenance of built facilities. The consideration for each compliance obligation is assigned once the independent sale price at the beginning of the contract is estimated, using IBERDROLA Group’s experience in the provision of similar services, of bidding terms and conditions, as well as any other internal or external information available.

Income from construction projects is recognised through the length of the construction process, since the control of the asset is transferred to the customer on an ongoing basis.

When income related to construction contracts can be reliably estimated, it is registered in an amount equivalent to the costs incurred to date as a proportion of the total estimated construction costs required until the termination of the contract. When the income from a contract cannot be reliably estimated, all such income is recognised to the extent that costs are incurred, provided that such costs are recoverable. Profit on the contract is only recognised when it is certain, based on budgeted costs and income.

Changes to construction work and any claims are included within contract revenue if amendments to the contract are legally demanded.
– Real property sales

The IBERDROLA Group follows the principle of recognising income on sales of property when legal title is transferred to the purchaser, which is usually the date the respective contracts are notarised.

The average number of the IBERDROLA Group employees in 2022 and 2021 has increased to 40,090 and 38,702 employees, of which 9,361 and 8,870 are women, respectively.

The average number of employees in the consolidated group corresponds to all the employees in those consolidated companies that have been integrated using the global integration method, as well as the employees of the joint ventures determined based on the participation share.

Law 15/2012 was published in Spain on 28 December 2012, on tax measures to ensure the sustainability of the energy sector. It introduced the following tax figures, whose impact, except for the green cent measures, has been recognised under the “Taxes other than income tax” heading of the consolidated Income statement for 2022 and 2021:

- A tax on the value of electricity output (IVPEE), entailing payment of 7% of the total amount to be received by the taxpayer for the production of electricity and incorporation thereof in the Spanish electricity system, measured at power station busbars, during the tax period. This tax gave rise to an expense of EUR 138 million in financial year 2021; it is suspended in financial year 2022.

Under Royal Decree-Law 12/2021, this tax was temporarily suspended for the third quarter of 2021 and through several extensions (the last one by Royal Decree-Law 11/2022), it has remained suspended until 31 December 2022.
In addition and in relation to the IVPEE tax base, Section 14 of Royal Decree-Law 11/2022 amended Section 6 (tax base) of Law 15/2012 to determine that, when transactions are carried out between related persons or entities, in accordance with the provisions of Law 27/2014, of 27 November, on Corporate Income Tax (LIS), the price agreed between the parties may not be lower than the market value for the purposes of calculating the tax base. To determine the market value, any of the methods set out in the Corporate Income Tax Act must be applied.

- A tax on spent nuclear fuel, whose cost has amounted to EUR 35 million and EUR 129 million in 2022 and 2021, respectively.

On 22 February 2022, the Central Tax Appeals Board upheld the economic-administrative claim filed by Central Nuclear Ascó II, C.B. in relation to the application of Transitional Provision Three of Law 15/2012 (coefficient to avoid retroactivity of the tax) in financial years 2017 and 2018, so that only spent nuclear fuel resulting from reactor operating cycles since the entry into force of Law 15/2012 is subject to taxation, also taking into account the use of the fuel in discontinuous operating cycles.

By virtue of this decision, applications have been submitted for rectification of self-assessments and refund of undue payments for the tax applicable since 2013 to the Cofrentes, Almaraz and Trillo plants, which have been upheld by the tax authorities. As a result, in 2022 the Group recognised refunds in this connection amounting to EUR 79 million in tax payments and EUR 25 million in late-payment interest, with a credit to “Taxes other than Income Tax” and “Finance income”, respectively, in the consolidated Income statement for 2022.

- A levy on the use of inland waters in the production of electricity in the inter-community districts (hydroelectric levy) which, as a general rule, involves the payment of a percentage of the economic value of the hydroelectric energy produced.

Iberdrola Generación, S.A.U. challenged Royal Decree 198/2015, of 23 March, which implements Section 112.bis of Royal Legislative Decree 1/2001, of 20 July, approving the revised text of the Water Act and regulating the levy for the use of inland waters for the production of electricity in inter-community districts. This appeal was partially upheld by the Supreme Court in its ruling of 21 April 2021, declaring the nullity of the second transitional provision and the second paragraph of the first additional provision of Royal Decree 198/2015. The consequences of such annulment were: (i) the nullity of the self-assessments for the 2013 and 2014 financial years due to maximum retroactivity because Royal Decree-Law 198/2015 was not in force in those years and (ii) its effect on the settlements for the 2015 to 2020 financial years, given that the concession titles were not modified to adapt them to the requirements of the hydroelectric levy, in accordance with the ad hoc procedures established in the water regulations.

In financial year 2021, the IBERDROLA Group recognised EUR 1,106 million (Note 35) – EUR 951 million in principal and EUR 155 million in late-payment interest – under “Current trade and other receivables – Other receivables from public authorities” in the consolidated Statement of financial position, with a credit to “Taxes other than income tax” and “Finance income” (Note 42), respectively, in the consolidated Income statement, which were collected in January 2022.
The hydroelectric levy was reintroduced by Law 7/2022 of 8 April on waste and contaminated soil for a circular economy. The expense recognised for this item in financial year 2022 amounts to EUR 78 million.

- Financing of Social Bonus costs

The Judgment of the Supreme Court of 31 January 2022 on IBERDROLA's appeal against the Social Bonus declares the inapplicability of the financing system charged to the retail suppliers or the parent companies of the groups that include retail suppliers, considering it discriminatory, and orders compensation to be paid to the financing companies for the amounts not passed on to customers.

In this regard, the Group recognised receivables in financial year 2022 amounting to EUR 109 million as principal and EUR 14 million in late payment interest under “Taxes other than income tax” and “Finance income”, respectively, in the consolidated Income statement for 2022.

Additionally, the “Taxes other than income tax” heading of the 2022 and 2021 consolidated Income statements includes EUR 204 million and EUR 198 million, respectively, as the best estimate available of the accrued expenses arising under Royal Decree-Law 6/2009 (Note 3.y) on amounts required for the management of radioactive waste and nuclear fuel.

44. CONTINGENT ASSETS AND LIABILITIES

IBERDROLA Group companies are party to legal and out-of-court disputes arising as part of the ordinary course of their business (disputes with suppliers, clients, administrative or tax authorities, individuals, environmental activists or employees). The IBERDROLA Group’s legal advisers believe that the outcome of these disputes will have no material impact on its equity or financial position.

In relation to said disputes, the IBERDROLA Group’s main contingent assets and liabilities not recognised in these consolidated Financial Statements as the pertinent accounting criteria are not met, are as follows:

**Contingent liabilities**

- On 16 June 2014, the National Commission on Markets and Competition (CNMC) initiated sanctioning proceedings against Iberdrola Generación, S.A.U. for purported fraudulent manipulation aimed at altering energy prices at the Duero, Tagus and Sil hydroelectric generation plants in December 2013. On 30 November 2015 the Company was notified of the EUR 25 million fine. Iberdrola Generación, S.A.U. lodged an appeal for a judicial review with the Judicial Review Chamber of the National High Court and was granted leave to proceed, whereupon enforcement of the penalty was stayed. The proceedings are currently stayed and pending preliminary proceedings before the Central Investigating Court of the National High Court, which, on 26 May 2022, resolved to finalise the investigation phase and to transfer the case to the parties and the Public Prosecutor’s Office so that, where appropriate, they can present their motions for prosecution. On 11 July 2022, Central Investigating Court No. 2 of the National High Court issued an order to open oral proceedings whereby it was agreed, inter alia: (i) to open oral proceedings and charge Iberdrola Generación, S.A.U. for an alleged offence under article 281 of the Criminal Code (ii) to order the posting of sureties in the amount of EUR 193 million, which have been provided through the arrangement of guarantees by Iberdrola Generación, S.A.U. in the amount of EUR 107 million and by the insurance companies in the amount of EUR 85 million.

- Administrative appeals lodged on 7 July 2020 before the National High Court against dismissals by the Central Tax Appeals Board notified to IBERDROLA on contested tax inspection reports signed by the Group in 2016, pertaining to the years 2008-2011. The main disputes relate to the elimination of the tax exemption on dividends received because the tax office believes that this exemption is incompatible with valuation adjustments for net investment hedges, differences in tax consolidation criteria and the possible existence of circumstances established in Article 15.1 of Spain’s General Tax Act under a debtor-swap operation for a number of bond issues. Throughout 2021, the corresponding submissions were made in the proceedings, and the dates for voting and ruling have not yet been set.
– Economic-administrative claims lodged on 17 December 2021 and 29 July 2022 before the Central Tax Appeals Board against the settlement decision on income tax notified to Iberdrola Energía España, S.A. as representative of Tax Group 2/86, in relation to contested tax inspection reports signed by the Group in 2021 and 2022 for the financial years 2012 to 2014 and 2015 to 2020, respectively. The adjustments in dispute are essentially the same as those discussed in relation to the years 2008 to 2011. To date, both claims remain pending resolution by the aforementioned Court, with the submissions corresponding to the first of them having been presented during the first quarter of 2022.

– Economic-administrative claim lodged on 29 December 2022 before the Central Tax Appeals Board against the settlement decision on VAT for financial years 2015 to 2017, notified to Iberdrola, S.A. as representative of Tax Group 0220/08BVA. The main disputed adjustments arise from the inclusion in the denominator of the pro rata of the VAT and the capital gains arising in portfolio transfers and/or corporate restructuring transactions, and the non-recognition by the tax authorities of the refund of VAT payments relating to unpaid debts mainly by individuals, more than one year old and with a tax base of less than EUR 300, applied for by CURENERGÍA and Iberdrola Clientes, S.A. in relation to those years. This request is based on the view that Spanish rules on VAT due on unpaid invoices are contrary to Community law.

– Administrative appeal lodged on 25 January 2021 before the National High Court against the decision of the Central Tax Appeals Board notified to IBERDROLA in December 2020. The claim, filed against the settlement agreements confirming the contested tax assessments issued against the Company in limited tax inspection proceedings in relation to income tax for the years 2012 to 2014, was partially upheld. The dispute with the public administration focuses on the applicability of the temporary imputation standard established in numerous Supreme Court decisions regarding income received by the Group, resulting from payments made based on rules contrary to law. The aforementioned decision partially upheld IBERDROLA's claims and accepted its view with regard to the taxes declared unconstitutional, and the remaining cases in dispute were referred for appeal to the National High Court. In the course of 2021, the corresponding submissions were presented in the proceedings, and the date for voting and ruling is still pending at the present time.
The ACE (an economic interest grouping in Portugal) consisting of the companies Acciona-Mota and Edivisa brought action for arbitration against Iberdrola Generación, S.A.U before the Central Arbitration Court of Lisbon (the arbitration body provided in the contract) with regard to the construction contract for the Alto Tâmega dam and hydroelectric plant, claiming EUR 30 million. The claim is grounded in the argument that they do not consider themselves liable for excess costs that were incurred due to deviations in the work performed. They also claim that they are not liable for the delays occurring and that IBERDROLA, consequently, does not have the right to impose on them any of the penalties envisaged in the contract. Furthermore, they state that the termination of the works contract is groundless and should be deemed null and void, and they demand compensation for said termination. IBERDROLA responded to the claim on 1 September 2021 by lodging a counterclaim for a total of EUR 60.2 million. In addition, the guarantees for the contract with ACE have been enforced and the company has paid EUR 8 million in penalties and EUR 5 million in advance payments within the scope of the disputed contract. These amounts will go on to form part of the arbitration dispute.

Iberdrola Castilla y León (IBERCYL) has been summoned as a subsidiary civil party, jointly and severally with the Junta de Castilla y León, in the proceedings before Valladolid Court No 4 for the alleged irregular awarding of wind power licences in Castilla y León. The order stipulated that IBERCYL had to post a bond for EUR 11.2 million in this regard. In addition, the same Court has requested certain defendants to furnish security for a total and joint amount of EUR 130 million to guarantee the financial penalties sought by the prosecution. These defendants have presented a corporate guarantee provided by Iberdrola Renovables Energía, S.A.U., unconditionally and irrevocably as a corporate personal guarantee on first demand, based on which the Court agreed in October 2022 to declare the bond provided to guarantee the pecuniary liabilities as sufficient.

Various labour, civil and tax claims are ongoing against several companies of the NEOENERGIA Group in Brazil in relation to their normal course of business. The IBERDROLA Group considers that the risk of potential losses at such companies has been assessed in line with the opinions of the authorities and the external tax advisers, and the relevant provisions have been made based on the likelihood of loss as per the available evidence, the position of courts and the most recent case law precedent.

Labour claims relate to actions brought by former employees of NEOENERGIA Group companies or former employees of companies providing services (subcontracting) with requests for overtime, wage equalisation and other labour rights, notably the collective action brought by the trade union SINTERN against the company Neoenergia Cosern, seeking the continuation of, and immediate compliance with, the Job Position, Career and Wages Plan approved in 1991, and seeking also payment of the wages differences for the last five years and past-due Social Security contributions. Civil proceedings relate to actions of a commercial and compensatory nature brought to claim material or moral damages, arbitrations discussing matters related to engineering and energy contracts and environmental actions and expropriation of property related to the execution of projects.
The tax claims include violation findings due to the following:

- amortised gain/goodwill expense (agio) is not tax deductible for the purpose of calculating income tax (both in income tax and employee contribution tax) applicable to the subsidiaries Neoenergia Pernambuco, Neoenergia Coelba, Neoenergia Cosern, Neoenergia Elektro, Itapebi and Termopernambuco. Several favourable appellate court decisions on this matter were handed down during financial year 2022 in relation to several of the years disputed by the Brazilian tax authorities vis-à-vis the companies Neoenergia Pernambuco and Neoenergia Cosern, with the final decision of the Supreme Court pending on the merits;
- failure to make income tax withholdings on interest payment on capital between companies belonging to the same group;
- the income tax withholding requirement on the alleged taxable capital gain accruing to Iberdrola Energía, S.A. following the incorporation of Elektro Holding by Neoenergia;
- questions concerning tax credits related to consumption tax (ICMS) at NC Energia, Termopernambuco, Neoenergia Pernambuco and Neoenergia Elektro;
- the tax authorities believe that payments for profit sharing, employee benefits, health insurance and life insurance should be recognised as social security expenses;
- offsetting by Neoenergia of receivables due to wrongly applying PIS/COFINS to finance income under a favourable ruling, which has been contested;
- questions concerning federal taxes – income tax and employee contribution tax – from dismissal of expenses with payment of regulatory compensation at the companies Neo Pernambuco and Neo Coelba;
- questions concerning the municipality of contribution of the public lighting service (COSIP), which holds that Coelba paid a smaller amount in the period between January 2018 and December 2019.

Turning to regulatory proceedings, distribution companies Neoenergia Pernambuco, Neoenergia Coelba, Neoenergia Cosern, Neoenergia Elektro y Neoenergia Brasilia are party to various suits and claims, notably: (i) proceedings to calculate individual and collective technical service continuity indicators; (ii) trade matters; (iii) financial compensation and recovery of global indicators; (iv) matters related to the collection or legality of tariff-related items or matters; and (v) matters related to the legality of administrative action instituted by ANEEL. Among said actions, the following stand out:

- Elektro’s Energy Social Tariff (for low income consumers), for which the Consumers Association intends to increase the number of eligible customers from 2002 to 2010, imposing on ANEEL and Elektro the obligation to restore tariff differences, which should be met, eventually, by the CDE sector fund.
- The free or onerous use of rights of way areas in roads for the electricity grid, the merits of which are being discussed before the Supreme Court.
- Several matters regarding over or under subscription of energy, currently under administrative discussion;
– The possibility of ANEEL including in the tariff tax income resulting from the favourable outcome of the legal dispute concerning the exclusion of the ICMS tax from the federal contributions calculation base for PIS/COFINS (subject of initial discussion at the administrative level);
– The action brought by Neoenergia Brasilia to annul ANEEL’s act that captured, for rate purposes, the surplus income obtained between May 2002 and October 2004, and July 2005 and August 2008, accumulated by the criteria for classifying Low Income consumers.

Claim by the Public Utilities Commission: in 2002, the California Public Utilities Commission and the California Electricity Oversight Board (CPUC and CEOB, respectively) submitted a claim to the Federal Energy Regulatory Commission (FERC) against a number of electricity producers, alleging that these companies had manipulated the market and that the prices set in energy purchase contracts were “unfair and unreasonable”, and demanded modifications to the contracts.

FERC dismissed the claim and, following a review by the Californian courts, the Supreme Court ordered FERC to review the case, which had remained dormant since 2008. In April 2016, following the reopening of the 2014 case, an initial ruling was issued that dismissed any market manipulation by Avangrid Renewables, but the initial ruling did conclude that the price of the power purchase agreements imposed an excessive burden on customers in the amount of 259 million US dollars. FERC staff have recommended that the case be closed without sanction.

– In relation to the arbitration pursued by Iberdrola Topolobampo, S.A. de C.V., a subsidiary of Iberdrola México, against the Federal Electricity Commission (CFE), the claimant, in addition to opposing IBERDROLA’s claims, has filed a counterclaim in the arbitration, claiming damages in the amount of USD 185.5 million and USD 4.7 million in additional penalties for not having reached the coefficient of national integration. The arbitration hearing has been held and the Award is expected to be issued in the first half of 2023.

– Iberdrola México has challenged in court a resolution of the Energy Regulation Commission (CRE) issuing charges by the Electricity Transmission Service to be applied by CFE Intermediación de Contratos Legados, S.A. de C.V. to the holders of Legacy Interconnection Contracts with Electricity Generation Plants with Renewable or Efficient Cogeneration Sources. The resolution substantially increases the charges for this service and, in the judgement of Iberdrola México, hinders and limits a constitutionally significant activity such as electricity generation and it is contrary to a number of rights protected by the Mexican constitution. After the granting of the injunctive measure sought by IBERDROLA, consisting of suspension of the contested resolution, the company had to post a bond in the amount of MXN 3,374 million with the court to secure the measure. The amount is the difference between what Iberdrola México would have to pay under the contested resolution and what it actually will pay pursuant to the injunction granted for tariff charges for electricity transmission services for 31 months; the amount is revised every six months. In the event the trial produces an unfavourable outcome, IBERDROLA would have to pay this amount.
- Iberdrola Mexico has filed a legal challenge against the resolution issued by the Energy Regulatory Commission (CRE), notified on 27 May 2022, by which it penalises Iberdrola Energía Monterrey, S.A. de C.V. (IEM) in the amount of MXN 9,145 million (approximately USD 467 million). The CRE intends to base its resolution on the fact that IEM allegedly carried out energy sales to its consumer partners in breach of the Law; additionally, the CRE seeks to base its claims on invoices obtained from the Mexican tax authorities (Servicio de Administración Tributaria, SAT). On 15 June 2022, IEM filed appeal proceeding against this resolution and interim relief has been requested to suspend the payment of the penalty. The amparo application was heard by the Third Specialised District Court and the admission of the suit for amparo and the granting of the provisional suspension of the sanction are pending. On 1 July 2022, IEM was notified of the provisional injunction against enforcement of the penalty and on 11 July 2022, a bond for the amount of the penalty was posted. Finally, we have been granted a definitive suspension so that payment does not have to be made, meaning that the contested act will not have an impact on the company’s legal position, nor jeopardise the effectiveness of the permit for self-supply of electricity.

Additionally, the following contingent liabilities have arisen as part of the ordinary business of the IBERDROLA Group:

- US gas companies own, or have owned, the land on which they operated the gas production plants. This land was polluted as a result of these activities. In some cases, the soil has been cleaned, while in others the soil has been assessed and identified, but has yet to be cleaned and in some other cases the extent of the pollution has yet to be determined. For the last group, at 31 December 2022 no provisions had been recognised because the cost cannot reasonably be estimated as the matter requires the regulators’ intervention and approval. In the past, the gas companies have received authorisation to recover cleaning expenses from customers through tariffs and they expect to recover such expenses for the remaining soil.

Contingent assets

- AVANGRID initiated legal proceedings against the former owners of certain sites in order to recover the costs of environmental restoration work it was forced to pay.

Restatement of contingent assets reported in prior periods

With regard to Order TED/490/2022, which entailed the recognition of a lower remuneration loss for 2016 and subsequent years in the company’s interim consolidated Financial Statements, an appeal was lodged and admitted for processing by the administrative chamber of the Supreme Court in the second half of 2022. The Company has recorded the adjusted income in the first half of the year, with the year-end effect for 2022 amounting to EUR 210 million.
Other information

As regards the legal proceedings instigated by third parties that may affect the remuneration and equity of the IBERDROLA Group, no significant appeals have been lodged.

Contingent assets and liabilities at 31 December 2021 are described in the IBERDROLA Group's consolidated Financial Statements for that year.

45. GUARANTEE COMMITMENTS TO THIRD PARTIES AND OTHER CONTINGENT LIABILITIES

IBERDROLA and its subsidiaries are required to provide guarantees associated with the normal management of the Group’s activities in the countries in which it operates.

The IBERDROLA Group guarantees the obligations assumed under power purchase agreements as well as grid access transactions in different energy markets and vis-à-vis the operators of different electricity systems (mainly MEFF, OMIE, National Grid, CFE, REE and EDP Distribución).

In addition, in 2022 the IBERDROLA Group has provided letters of credit to cover the Initial Margin collateral necessary to carry out derivatives transactions in certain clearing houses (mainly ICE and EEX).

With regard to generation from renewable sources, the IBERDROLA Group has posted guarantees to third parties to cover the construction, commissioning and dismantling of facilities, in addition to its long-term obligations to sell energy.

In 2016, tax inspection reports were signed in protest for income tax for the years 2008 to 2011. IBERDROLA filed the corresponding appeals with the Central Tax Appeals Board against the settlements that confirmed the contested tax assessments, seeking the automatic suspension of the enforcement of the tax settlements by furnishing the necessary bank guarantees. In June 2020, IBERDROLA was notified of the Court's rejection decisions, which were contested in administrative appeals lodged before the National High Court (filed on 7 July 2020), which are ongoing, with the suspension of the enforcement of the assessments while maintaining the guarantees provided for this purpose (Note 34). During 2022, the audits carried out by the tax authorities relating to the Tax Group's corporate income tax were completed, covering all income tax items in relation to financial years 2015 to 2017 and covering only certain income tax items in relation to financial years 2012 to 2014 and 2018 to 2020. As a result, IBERDROLA SA has been notified of the settlement agreements confirming the contested inspection reports in relation to each and every one of the years, adjusting the same substantive topics as in the years 2008 to 2011, although, as far as these periods are concerned, the settlements resulted in amounts to be refunded to the company. IBERDROLA requested, and the Administration agreed, to partially offset the refunds recognised in its favour in relation to financial years 2012 to 2020, with the debts suspended due to the provision of a bank guarantee relating to financial years 2008 to 2011, reducing the amount of such debts and reducing the object of the collateral guarantees provided, which continue to be held by the tax authorities.
In addition, at 31 December 2022 and 2021, there were outstanding obligations resulting from bond issues in the United States amounting to EUR 2,709 million and EUR 2,370 million, which were secured by items of property, plant and equipment of the AVANGRID subgroup.

IBERDROLA considers that any further liability at 31 December 2022 and 2021 arising from the guarantees posted at that date would not be significant.

Moreover, the IBERDROLA Group, in compliance with its contractual obligations associated with loans received from banks, had fully or partially pledged some of its subsidiaries’ shares at 31 December 2022 and 2021. A breakdown of the shares pledged is as follows, by company:

### 46. REMUNERATION OF THE BOARD OF DIRECTORS

#### 46.1 Application of by-law mandated remuneration for 2022

Article 48 of IBERDROLA’s By-Laws provides that the Company shall annually allocate as a by-law mandated expense an amount equal to a maximum of 2% of the profit obtained by the consolidated Group during the financial year.

On the recommendation of the Remuneration Committee, the Board of Directors has decided to assign by-law stipulated remuneration of EUR 16.443 million in 2022, which has been charged to “Personnel expenses” in the Income statement (Note 39). This amount, together with the unused amount of the by-law stipulated remuneration for the year 2021 (EUR 0.557 million) amounts to EUR 17 million, the same amount as in the previous seven financial years.

#### a) Fixed remuneration and attendance bonuses

The fixed annual remuneration and attendance bonuses payable to Board and committee members in their capacity as such in 2022 and 2021, are as follows:

### Remuneration of the executive directors for their executive duties

The Board of Directors resolved to maintain the fixed remuneration for the executive chairman in 2022 at EUR 2.250 million. It also decided to maintain the existing cap on variable annual remuneration, which may not exceed EUR 3.250 million and which will be paid as agreed upon in 2023. Both amounts have remained unchanged over the last 12 years.

The chief executive officer's fixed remuneration, since being appointed as a director on 25 October 2022, amounted to EUR 0.184 million.

### Remuneration paid and accrued by the directors of the Company

The fixed remuneration accrued by the members of the Board of Directors, individually counted, was as follows in 2022 and 2021:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>Fixed remuneration</th>
<th>Attendance bonus</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chairman of the Board</td>
<td>0.567</td>
<td>0.004</td>

<td>0.165</td>
<td>0.002</td>
</tr>
</tbody>
</table>

(*) Remuneration assigned to the chief executive officer since being appointed as a director.
On 26 March 2022, the Board of Directors approved his appointment as Chairman of the Appointments Committee.

On 26 March 2022, her appointment as chair of the Appointments Committee expired.

Relinquished executive duties with effect from 1 November 2021. In accordance with section 4.3 of the Director Remuneration Policy regarding the non-competition commitment of external non proprietary directors, Mr Francisco Martínez Córcoles, who resigned as director on 25 October 2022, received a severance payment equivalent to 90% of the fixed amount he would have received for the remainder of his term, up to a maximum of twice 90% of this annual fixed amount.

</tbody>
</table>

(1) Remuneration accrued in 2022 in relation to the time effectively spent in office. This amount will not be paid until the approval of 2022 by-law stipulated remuneration at the 2023 General Shareholders’ Meeting.

(2) Amount relates to variable remuneration received in 2022, based on achievement of targets and personal performance in 2021.

(3) Total amounts accrued in the year since being appointed as director on 25 October 2022. Remuneration prior to that date, corresponding to the performance as an executive while he was a member of senior management, salary, variable remuneration, strategic bonus 2017-2019 and other remuneration items amounted to EUR 2.516 million during the financial year 2022 and EUR 1.121 million during the financial year 2021.

(4) On 26 March 2022, Mr Francisco Martínez Córcoles, who resigned as director on 25 October 2022, received a severance payment equivalent to 90% of the fixed amount he would have received for the remainder of his term, up to a maximum of twice 90% of this annual fixed amount.
d) Group civil liability insurance

The premium paid to cover directors’ civil liability insurance amounted to EUR 0.314 million and EUR 0.402 million in 2022 and 2021, respectively.

e) Others

The expenses of the Board of Directors in relation to external services and other policies in 2022 and 2021 amounted to EUR 3.293 million and EUR 2.984 million, respectively.

In 2022 the amount of the premium for the pension insurance policies relating to the former members of the Board of Directors amounted to EUR 0.510 million, while in 2021, a refund of EUR 0.194 million was received for the adjustment of these policies.

46.2 Remuneration through the delivery of Company shares

At the General Shareholders’ Meeting held on 31 March 2017 the shareholders approved the 2017-2019 Strategic Bonus as a long-term incentive tied to the Company’s performance in relation to certain key parameters (Note 22).

In the first half of 2022, the third and last of the annual settlements was completed. The executive chairman has received 633,334 IBERDROLA shares and the former director Francisco Martínez Córcoles has received 100,000 shares.

46.3 Remuneration for seats on other boards

Directors who held the position of director in 2022 and 2021 at companies that are not wholly owned, directly or indirectly, by IBERDROLA received the following remuneration:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>2022</th>

46.5 Termination benefit clauses

Severance clauses for executive directors are described in paragraph C.1.39 of the Annual Corporate Governance Report included in the Management Report.

47. INFORMATION REGARDING COMPLIANCE WITH SECTION 229 OF THE SPANISH COMPANIES ACT

As established in Section 229 of the Spanish Companies Act (Ley de Sociedades de Capital), as introduced by Royal Decree-Law 1/2010 of 2 July 2010 and in Law 31/2014, of 3 December 2014, amending the Spanish Companies Act to improve corporate governance, directors may encounter the following conflicts of interests.

The Executive Chairman and Chief Executive Officer left the room during discussions on all resolutions relating to their contracts, including their respective compensation.

Mr Sagredo Ormaza did not take part in the deliberations on the resolutions concerning Kutxabank, S.A., specifically as regards the hiring of Norbolsa Sociedad de Valores, S.A. as agent in relation to the Iberdrola Retribución Flexible optional dividend system; and Mr Acebes Paniagua left the room during deliberations on a resolution regarding the arrangement of legal services.

48. REMUNERATION OF SENIOR MANAGEMENT

Senior managers are those who answer directly to the Company’s Board of Directors, its chairman & CEO, and in all cases to the director of the Internal Audit area, as well as any other officer directed by the Board of Directors.

At 31 December 2022, the Company had 10 senior managers.

Personnel expenses relating to members of senior management amounted to EUR 11.4 million and EUR 10.8 million 2022 and 2021, respectively, and are recognised under “Personnel expenses” in the consolidated Income statement.
The remuneration and other benefits received by senior management in 2022 and 2021, respectively, are as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>2022</th>
<th>2021 (*)</th>
</tr>
</thead>
<tbody>

</tbody>
</table>

(*) For comparison purposes, information has been included for members holding this rating as at 31 December 2022 (one additional member and two members less).

In 2022 and 2021 senior managers who sat on the boards of companies that were not wholly owned by IBERDROLA, whether directly or indirectly, received EUR 0.6 million and EUR 0.5 million, respectively, from those companies.

In the first half of 2022 and 2021, the third and second of the three annual payments under the 2017-2019 Strategic Bonus was made (Note 22) once the level of achievement of the relevant targets had been calculated. As a result, the members of senior management received a total of 525,010 and 524,995 shares respectively.

The General Shareholders’ Meeting held on 2 April 2020 set the 2020-2022 Strategic Bonus (Note 22), pegged to the Company’s financial, business and sustainable development performance over the 2020-2022 horizon and targeting up to 300 beneficiaries. A total of 1,469,600 shares may be delivered to senior officers over a three-year period, based on the degree of attainment of the targets to which the scheme is pegged.

Severance clauses for members of senior management and other executive officers are described in paragraph C.1.39 of the Annual Corporate Governance Report, included within the Management Report.

In 2022 and 2021, there were no further transactions concluded with senior officers.

Fixed and variable remuneration paid to executives and other staff with managerial responsibilities not included in the senior management of IBERDROLA (734 individuals) amounted to EUR 136.3 million in 2022 and EUR 131.9 million in 2021 (767 individuals), affected by the exchange rate.
The following transactions take place within the normal course of business and are carried out under normal market conditions.

**Transactions carried out by IBERDROLA with significant shareholders (Note 21)**

In 2022 there were no significant shareholders that met the definition of Section 529 vicies of the Spanish Companies Act because they did not hold 10% of the voting rights or were not represented on the Board of Directors.
Transactions carried out with equity-accounted investees

The breakdown of transactions with equity-accounted investees that are related parties and that were not eliminated on consolidation (Note 2.b) is as follows:

50. EVENTS SUBSEQUENT TO 31 DECEMBER 2022

The main events subsequent to 31 December 2022 were as follows:

Iberdrola Retribución Flexible

On 4 January 2023, the following terms governing the second scrip issue (Iberdrola Retribución Flexible) were approved by shareholders at the General Shareholders’ Meeting of IBERDROLA held on 17 June 2022, under item nine of the agenda:

– The maximum number of shares to be issued under the capital increase is 106,034,900.

– The number of free-of-charge allocation rights required to receive one new share is 60.

– The maximum nominal value of the capital increase is EUR 79,526,175.

– The gross Interim Dividend per share amounts to EUR 0.180.

At the end of the trading period for the free-of-charge allocation rights:

– During the period established for this purpose, the holders of 1,305,893,982 shares in the Company opted to receive the Interim Dividend. Thus, the gross amount paid out under the Interim Dividend was EUR 235 million. As a result, those shareholders expressly waived 1,305,893,982 free-of-charge allocation rights and, therefore, the right to receive 21,764,900 new shares.

– Furthermore, the final number of new common shares with a par value of EUR 0.75 issued will be 84,270,000, yielding a nominal capital increase (under this issue) of EUR 63 million and adding 1.325% to IBERDROLA’s pre-issue share capital.

– Following this share capital increase, IBERDROLA’s share capital amounts to EUR 4,834,773,000, represented by 6,446,364,000 common shares, each with a par value of EUR 0.75 and all fully subscribed for and paid up.

– Following fulfilment of the pertinent legal requirements (especially verification of those requirements by the Spanish National Securities Market Commission), the new shares were admitted for trading on the continuous market of the Madrid, Barcelona, Bilbao and Valencia Stock Exchanges, through the Automated Quotation System (Continuous Market), on 31 January 2023. Regular trading of the new shares commenced on 1 February 2023.
**Bank market**

The most significant financing arranged by the IBERDROLA Group after 31 December 2022 is as follows:

<table>
<thead>
<tr>
<th>Borrower</th>
<th>Transaction</th>
<th>Amount (millions)</th>
<th>Currency</th>
<th>Maturity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Iberdrola Financiación</td>
<td>Green BEI loan</td>
<td>150</td>
<td>EUR</td>
<td>To be determined</td>
</tr>
</tbody>
</table>

**Main transactions to extend existing funding**

<table>
<thead>
<tr>
<th>Borrower</th>

<th>Amount (millions)</th>
<th>Currency</th>
<th>Maturity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Iberdrola México</td>
<td>Syndicated loan</td>
<td>500</td>
<td>USD</td>
<td>Dec-25</td>
</tr>
</tbody>
</table>

**Perpetual subordinated bonds**

In January 2023, Iberdrola Finanzas, S.A. fixed the price and the terms and conditions of an issue of subordinated perpetual bonds with the subordinated guarantee of Iberdrola, S.A. for a total amount of EUR 1,000 million. The issue has been structured in a single tranche, the unit nominal amount of each bond is EUR 100,000 and they will be issued at a price equivalent to 100% of their nominal value. The funds obtained will be used to buy back another issue of subordinated perpetual bonds, made in 2017 by Iberdrola International B.V. (also with the subordinated guarantee of Iberdrola, S.A.) for the same amount (EUR 1,000 million). The buy-back will take place before 22 May 2023.

The bonds will bear interest at a fixed annual coupon rate of 4.875%, from the issue date (inclusive) up to (but not including) 25 July 2028, payable annually.

From the first review date (inclusive), they will accrue interest at a rate equal to the applicable 5-year swap rate plus a spread of:

- 2.262% per annum for five years following the first review date;
- 2.512% per annum for each of the five-year review periods beginning on 25 July 2033, 25 July 2038, and 25 July 2043; and
- 3.262% per annum for the subsequent five-year review periods.

The issuer will have the option to defer interest payments on the bonds, without this amounting to a default event. Interest deferred in this way will be cumulative and must be paid on certain assumptions defined in the terms and conditions of the bonds.

The issuer will also be entitled to redeem the bonds on certain specified dates or in certain events provided for in the terms and conditions thereof.

The issue was closed and disbursed on 25 January 2023.

**Temporary energy tax**

On 28 December, Law 38/2022 of 27 December on the establishment of temporary energy taxes and taxes on credit institutions and financial credit establishments and creating the temporary community service tax on large fortunes, and amending certain tax rules, was published.
Under this law, entities that are considered to be the main operator in the energy sectors are subject to a temporary energy tax during 2023 and 2024, in the legal form of a non-tax public contribution.

The payment obligation arises on the first day of the calendar year and must be paid within the first 20 calendar days of September of that year, without prejudice to the advance 50% payment to be made in February.

The amount of contribution to be paid is the result of applying 1.2% to the net turnover resulting from the activity carried out in Spain in the calendar year prior to the year in which the obligation arises.

The estimated amount of the tax payable by the IBERDROLA Group stands at EUR 216 million. A payment of 50% was made on 17 February 2023.

**Framework co-investment agreement for the joint development of a portfolio of renewable assets in Spain**

In January 2023, Iberdrola Renovables Energía, S.A., together with its subsidiary Iberenova Promociones, S.A., signed a framework agreement to co-invest in renewable assets in Spain, thus contributing to accelerating the country's decarbonisation efforts.

The agreement envisages the acquisition by NBIM Iberian Reinfra AS (NBIM Iberian), a company belonging to the group of which Norges Bank is the holding company, of a 49% stake in the share capital of several IBERDROLA Group companies operating onshore wind and solar photovoltaic projects in Spain. The total project portfolio of these companies amounts to 1,265 MW (of which 137 MW are already in operation and 1,128 MW are under development). Once these stakes have been acquired by NBIM Iberian, Iberenova Promociones and NBIM Iberian will contribute their respective stakes in the companies owning the projects to a holding company owned by both companies in the same proportion of 51% and 49%, respectively, of their share capital.

Iberdrola Renovables Energía will retain indirect control of the companies that own the projects and will manage the development of the non-operational projects until they enter commercial operation, and the IBERDROLA Group will continue to provide them with the operation and maintenance services necessary for running them. The agreement envisages that the parties may extend it to other renewable assets in addition to those that constitute its initial perimeter in Spain or in other countries.

The valuation of 100% of this portfolio of renewable projects amounts to approximately EUR 1,225 million, making NBIM Iberian's total investment in this portfolio, for its 49% stake, approximately EUR 600 million, subject to possible adjustments that are customary in this type of transaction. Of this amount, NBIM Iberian will pay an initial amount upon completion of the transaction as consideration for the stakes acquired in the companies owning the projects already in operation. NBIM Iberian will pay the remaining price as the projects under development reach commercial operation and the corresponding purchases by NBIM Iberian of the minority interests to be acquired in the companies owning these projects are completed. The completion of the Transaction is conditional upon NBIM Iberian obtaining the mandatory authorisations for foreign direct investment.
# 51. FEES FOR SERVICES PROVIDED BY THE STATUTORY AUDITORS

Fees paid for services provided in 2022 and 2021 by KPMG Auditores, S.L. and the other affiliates of KPMG International are as follows:

</tbody>
</table>

(*) Mainly agreed-upon procedures reports required by the regulator in each country, as well as reports additional to the audit report required by current legislation in certain countries where the Group operates.

In addition, in financial year 2022, other auditors provided auditing services amounting to EUR 1.01 million and other services amounting to EUR 0.32 million.

### 52. EARNINGS PER SHARE

The weighted average number of common shares used to calculate basic and diluted earnings per share at 31 December 2022 and 2021 (Note 3.z) is as follows:

<table>
<thead>
<tr>
<th></th>
<th>2022</th>
<th>2021</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Average number of shares during the year</strong></td>
<td>6,544,874,866</td>
<td>6,733,249,050</td>
</tr>
<tr>
<td><strong>Average number of treasury shares held</strong></td>
<td>(72,005,122)</td>
<td>(87,352,952)</td>
</tr>
<tr>
<td><strong>Number of shares outstanding</strong></td>
<td>6,472,869,744</td>
<td>6,645,896,098</td>
</tr>
</tbody>
</table>

Basic and diluted earnings per share for 2022 and 2021 are as follows:

<table>
<thead>
<tr>
<th></th>
<th>2022</th>
<th>2021</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Net profit from continuing operations at the Parent</strong> (*) (millions of euros)</td>
<td>4,410</td>
<td>4,411</td>
</tr>
<tr>
<td>Accrued interest on subordinated perpetual bonds (millions of euros) (Note 21)</td>
<td>(169)</td>
<td>(169)</td>
</tr>
<tr>
<td>Adjusted net profit from continuing operations (millions of euros)</td>
<td>4,241</td>
<td>4,242</td>
</tr>
<tr>
<td>Net profit from discontinued operations (millions of euros)</td>
<td>(71)</td>
<td>(35)</td>
</tr>
<tr>
<td><strong>Number of shares outstanding</strong></td>
<td>6,472,869,744</td>
<td>6,645,896,098</td>
</tr>
<tr>
<td><strong>Earnings per share (euros) from continuing operations</strong></td>
<td>0.655</td>
<td>0.567</td>
</tr>
<tr>
<td><strong>Earnings per share (euros) from discontinued operations</strong></td>
<td>(0.011)</td>
<td>(0.005)</td>
</tr>
</tbody>
</table>

(*) Profit for the year from discontinued operations net of non-controlling interests.

53. AUTHORISATION FOR ISSUE OF FINANCIAL STATEMENTS

The consolidated Financial Statements for the year ended on 31 December 2022 were authorised for issue by the directors of IBERDROLA on 21 February 2023.

54. EXPLANATION ADDED FOR TRANSLATION TO ENGLISH

These consolidated Financial statements are presented on the basis of IFRS, as adopted by the European Union. Certain accounting practices applied by the Group that conform to IFRS may not conform to other generally accepted accounting principles in other countries.
APPENDIX I
ADDITIONAL INFORMATION FOR 2022 IN RELATION TO GROUP COMPANIES, JOINT ARRANGEMENTS AND ASSOCIATES OF THE IBERDROLA GROUP

The percentages of direct or indirect stakes that Iberdrola, S.A. holds in its subsidiaries across its different businesses are shown below. The percentage of votes on the decision-making bodies of those subsidiaries, which are controlled by IBERDROLA, essentially corresponds to the percentage of ownership.

(*) The accounting method used in each company is as follows:

   FC: Full consolidation  
   EM: Equity method

(1) Companies that are controlled by the Group but due to their immateriality have been consolidated using the equity method. At 31 December 2022, the total asset value and earnings for the period corresponding to these companies amounted to EUR 32 million and EUR 3 million, respectively. At 31 December 2021, the total asset value and earnings for the period corresponding to those companies amounted to EUR 28 million and EUR 4 million, respectively.

(2) Companies considered joint ventures, accounted for using the equity method, where shareholders’ agreements only grant the right to the net assets of the business.

(3) Companies at which the Group exercises control through shareholders’ agreements, despite holding a percentage of voting rights of below 51%.

(4) Companies in which the Group has significant influence despite holding a percentage of voting rights of less than 20%, by virtue of seats held on those companies’ boards of directors.

(5) Companies in which the Group exercises control, joint control or significant influence, but which, given their immateriality, have not been included in the consolidation scope.

APPENDIX II
SECTOR REGULATIONS: MOST SIGNIFICANT REGULATORY DEVELOPMENTS IN THE YEAR

A raft of new rules and regulations affecting the energy sector were enacted in 2022. This Appendix addresses the most significant developments.

1. European Union

Throughout 2022 and within the scope of European regulation, work continued on the Fit-for-55 legislative package, the aim of which is to define objectives for 2030 compatible with climate neutrality in 2050. The package is expected to be approved in the first quarter of 2023. Most notable, however, is the European response to the energy price crisis stemming from the Ukrainian war, which has completely refocused the regulatory debate, and which must be framed in the context of the international gas price developments that accompanied the conflict. On another front, relevant measures have been taken in the area of sustainable finance.

Response to the consequences of the Ukraine Crisis

Since 8 March 2022, European Union (EU) bodies have been very active in response to the exceptional nature of the Crisis, when the European Commission published the Communication COM (2022) 108, REPower EU, analysing possible tools and conditions for government intervention in energy markets and to support consumers. Since then, the Commission has also stressed the need to increase the EU's energy independence, moving away from Russian gas and replacing it mostly with non-fossil options.

On 23 March 2022 and coinciding with an Extraordinary European Council on 24-25 March, the Commission adopted Communication COM (2022) 138 on security of supply and affordable prices, addressing possible avenues for public intervention on markets and their effects.

These proposals were complemented by Communication 2022/C 131 I/01, which sets out a temporary and specific framework for state aid in the context of the current Crisis and a proposal for a reform of the rules on gas supply security. The latter, which set minimum stocks for gas storage (80-90%) on 1 November each year, was quickly adopted and published in the OJEU on 30 June (Regulation (EU) 2022/1032 of 29/6/22 amending Regulations (EU) 2017/1938 and (EC) No 715/2009 in relation to gas storage).

In addition, with the publication of the Communication COM (2022) 230 on the REPower EU Plan on 18 May, the Commission called for accelerating the energy transition, and joining forces across the EU to achieve a more resilient and integrated electricity system. The plan comprises four main lines of action: (a) saving energy, (b) diversifying gas supplies, (c) replacing fossil fuels with renewable energies, and (d) identifying the investments and funds needed to make the plan viable. States will be required to make more ambitious commitments when updating their energy and climate action plans to be adopted in June 2024, according to the Commission's Communication (2022/C 495/02), published on 29 December 2022.
Concurrently with the EU REPower Plan and with the aim of countering the effects of high electricity prices in the short term, the Commission recommended, through Communication COM (2022) 236 on Short-term energy market interventions, to prioritise less interventionist measures, which, if implemented, should be temporary and should not extend beyond the next winter season - until 1 May 2023.

On 20 July 2022, in Communication COM (2022) 360, “Save gas for a safe winter”, the Commission proposed a plan for a potential cut-off of Russian gas supplies through gas savings, as well as changes to the Temporary Framework for State Aid to address the crisis brought about by the war in Ukraine. It also made a proposal for a Regulation on coordinated gas demand reduction measures, which entered into force a few weeks later (Council Regulation (EU) 2022/1369 of 5 August 2022). The latter rule provides for a voluntary reduction of gas demand in each State (15%) during the period 1/8/2022-31/3/2023, but which may have binding force in the event of an alert. The demand reduction target could be lowered to 8%, if a state demonstrated weak interconnection, and was mainly export-oriented.

On 20 October 2022, Regulation (EU) 2022/1854, on an emergency intervention to address high energy prices, was published. While cautioning against the risk of uncoordinated measures, the Regulation accords States considerable flexibility in establishing their own measures and benchmarks. Some of the key elements of the measure include:

- **Coordinated reduction in electricity demand:** An indicative 10% monthly reduction in gross consumption and a binding 5% reduction in consumption during peak hours.
- **Price cap for inframarginal technologies:** Cap on market revenues of EUR 180 per MWh, applicable until 30 June 2023, for wind, solar, nuclear and hydro, among others.
- **Mandatory, solidarity-based contribution:** For the oil, gas, coal and refining sector: temporary, of at least 33% and applicable on profits in 2022 and/or 2023 that are more than 20% higher than the average profit made in the period 2018-2021.
- **Support measures for consumers:** Allowing (though not obliging) States to introduce regulated prices not only for domestic electricity consumers and micro-enterprises, but also for SMEs.

In December 2022 the European energy crisis response framework was rounded off with three legislative instruments on the following aspects:

- **Council Regulation (EU) 2022/2578 of 22 December 2022,** which develops a temporary European cap mechanism for forward contracts on organised virtual trading platforms. The mechanism would be triggered in the following situation: 1/ the thresholds of EUR 180 per MWh on the TTF market are exceeded for three consecutive days and, 2/ the one-month forward contract on the TTF market exceeds international liquefied gas prices by EUR 35. The mechanism will be in force from 15 February 2023 and will reviewed in November of the same year. It will not be activated in an emergency situation.
- **Council Regulation (EU) 2022/2576 of 19 December 2022,** which establishes a voluntary mechanism for the joint purchasing of gas by Member States.
Council Regulation (EU) 2022/2577 of 22 December 2022 laying down a framework to accelerate the deployment of renewable energy, reducing the lead times for small photovoltaic, self-consumption and heat pump applications, and considering new applications for the development of renewables as being of overriding public interest (with each State having the option of extending the benefits to all applications).

**Sustainable finance**

The regulation on taxonomy (classification of sustainable activities) for European climate change mitigation and adaptation targets was completed in 2022, specifying the conditions for the inclusion of nuclear and gas-fired generation (Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, supplementing Regulation (EU) 2019/2088). The transparency of activities is also reinforced, so as to clearly differentiate gas and nuclear generation from other activities considered sustainable (renewables, grids, renewable hydrogen, etc.).

On 14 December 2022, Directive (EU) 2022/2464 was published in the OJEU, setting out the rules and formats for sustainability reporting by large companies and certain SMEs, incorporating environmental, social, human rights and governance factors.

2. Spain

- **Spanish electricity sector**

The climate of high and volatile gas prices continued throughout 2022, aggravated by the effects of the war in Ukraine, which has increased prices in daily wholesale electricity markets across Europe. In Spain, consumers subject to the regulated price (Voluntary Price for Small Consumers – PVPC), pegged to market and not yet adjusted, and consumers who purchase their energy directly on the wholesale market or at prices referenced to it, were particularly affected by electricity price increases in the first quarter of the year, which led the government to adopt various market intervention measures, in addition to others focused on protecting vulnerable consumers.

**Consumer protection and price intervention measures**

Several Royal Decree-Laws (RD-Law 2/2022, RD-Law 6/2022, RD-Law 10/2022, RD-Law 11/2022, RD-Law 18/2022 and RD-Law 20/2022) have extended the protection measures of the social shield, which include the prohibition of electricity and natural gas supply cutoffs for vulnerable consumers, VAT reduction (up to 5%) and the special tax on electricity, suspension of the tax on electricity generation, Social Bonus discounts for vulnerable consumers (65%-80%), a 15% increase in subsidised energy and a new category with a 40% discount.

Under Royal Decree-Law 6/2022, a new system for financing the Social Bonus has been established, which is binding on all companies engaged in electricity activities, recognising the cost for all companies engaged in regulated activities.

www.iberdrola.com
The mechanism for revenue reduction due to soaring gas prices has also been extended until 31 December 2023, with a price limit for the underlying energy in the contracts set at EUR 67 per MWh.

Moreover, following approval by the European Commission, Royal Decree-Law 10/2022 establishes a temporary mechanism for adjusting production costs to reduce the price of electricity on the wholesale market until 31 May 2023. Through this mechanism, gas, coal and cogeneration plants will receive a subsidy for the difference between the MIBGAS price and a benchmark gas price (EUR 40-70 per MWh), the cost of which will be financed by the demand associated with contracts signed after 26 April 2022, plus demand associated with earlier contracts once they are renewed or extended.

The aforementioned Royal Decree-Law also establishes a mandate to review the formula for calculating the voluntary price for small consumers (PVPC) from 1 January 2023 (pending) so as to revise the indexation of the regulated regime for renewables and cogeneration, including a basket of prices between the spot market and the annual and quarterly futures markets. Indexation to futures markets will be gradual, reaching 75% by 2025.

Other measures have also been prolonged, including the 80% tariff relief for electro-intensive consumers and the possibility of modifying the contracted power without penalty. To offset these and other measures affecting the sector’s revenues, various items have been allocated from the State Budget to guarantee the financial sustainability of companies operating within the sector.

Networks remuneration

Throughout 2022, various regulations were published revising the regulated remuneration of the electricity distribution activity for previous years. Order TED/490/2022, of 31 May, enforcing the Supreme Court judgment declaring that Order IET/980/2016, of 10 June, which establishes the remuneration of electricity distribution companies for 2016, is detrimental to the public interest. Order TED/749/2022, of 27 July, was also published, approving the incentive or penalty for the reduction of losses in the electricity distribution network for 2016, modifying the base remuneration for 2016 for several distribution companies, and approving the remuneration of electricity distribution companies for 2017, 2018 and 2019.

In addition, a Resolution was published that establishes the provisional distribution remuneration for 2022 equal to that of 2016, until the definitive remuneration is published.

Remuneration of renewable and cogeneration facilities

Royal Decree-Law 6/2022 establishes the extraordinary revision of renewable and cogeneration premiums in 2022, with no impact on the profitability of these facilities, since they will be offset throughout the rest of the regulatory life.
Royal Decree-Law 17/2022 allows mainland cogeneration plants to temporarily receive the generation market adjustment mechanism (gas cap) in exchange for waiving the regulated remuneration. It applies only to facilities under the specific remuneration regime, from the time they apply for registration under the adjustment mechanism (starting on the first day of the following month) until they apply for de-registration or the mechanism is discontinued. Thereafter, they will return to their previous regulated remuneration.

For cogeneration, Royal Decree-Law 20/2022 establishes that until the new calculation methodology is published, the regulated Operating Remuneration (OR) will be updated based on half-yearly variations in raw material and gas tariffs.

A series of Ministerial Orders updated the remuneration corresponding to the second calendar half-year of 2020 and the first calendar half-year of 2021 (Order TED/989/2022 of 11 October), the values of the operating remuneration corresponding to the first calendar half-year of 2019 (Order TED/990/2022 of 11 October), and the operating remuneration for the second half of 2021 for facilities whose operating costs depend essentially on fuel prices (Order TED/995/2022 of 14 October). As envisaged in Royal Decree Law 6/2022, the values for the extraordinary review of the remuneration parameters as of 1 January 2022 were also published (Order TED/1232/2022, of 2 December). Lastly, the operating remuneration (OR) for cogeneration and waste in the second half of 2022 was published (Order TED/1295/2022 of 22 December).

**Promotion of renewable energy, storage and self-consumption**

Successive Royal Decree-Laws on energy matters published in 2022 have incorporated measures to promote the development of renewable energies, electricity storage and self-consumption.

Royal Decree-Law 6/2022 sets out measures to expedite processing of projects (up to 150 MW in photovoltaic and up to 75 MW in wind), facilitate access to the grid for self-consumption facilities and authorise floating photovoltaic plants.

Royal Decree-Law 11/2022 amends certain aspects of the simplified processing of renewable projects regulated in Royal Decree-Law 6/2022. In particular, to be eligible, projects must now be located in areas of low sensitivity (previously low or moderate).

Royal Decree-Law 14/2022 classifies hybridisation with storage for metering and registration purposes under Type 3. Hydroelectric storage is also promoted by permitting modifications to existing hydroelectric facilities by adding electronic power stages, provided the changes allow for reversible operation of the facility, without the generation technology itself being considered modified and therefore without the need to obtain new access permits. For self-consumption, the minimum time for remaining in one modality (with/without surpluses) is reduced from one year to four months and processing is streamlined for facilities ≤100 kW, limiting the time for activation of self-consumption by the distributor to two months.
Under Royal Decree-Law 17/2022, a maximum period of 15 days is established for the CNMC to prepare the mandatory report for the authorisation of facilities, with silence considered as approval and the possibility of a favourable report without detailed analysis if the project developer has already received another favourable report for the same technology in the last two years.

Lastly, Royal Decree-Law 18/2022 and Royal Decree-Law 20/2022 contain a final set of measures:

• Self-consumption via the grid: The distance for photovoltaic installations on roofs or on buildings is extended to 1 km. Subsequently, Royal Decree-Law 20/2022 increased the limit of self-consumption in proximity to 2,000 metres (previously 1,000 metres), for photovoltaic facilities on roofs, industrial land and artificial structures.

• More than one facility may be installed in the same cadastral reference.

• New obligation for grid operators to submit quarterly information to the System Operator on grid-connected self-consumption facilities.

• Direct lines: the obligation to belong to the same business group is waived for renewable production facilities that connect to a consumer.

• Small power facilities: exonerates facilities of up to 500 kW (previously 100 kW in Low Voltage) from the Prior Administrative Authorisation and Construction Authorisation.

• Free depreciation for investments in facilities for self-consumption of electricity, as well as facilities for thermal use for own consumption, provided that they use energy from renewable sources and replace facilities that used energy from non-renewable fossil fuel sources.

• In the nodes reserved for tender, the administrative procedures initiated are suspended for 18 months. Procedures are also simplified for renewable projects that fall within the competence of the State.

**Access and connection**

Royal Decree-Law 11/2022 abolishes the deadline for holding network capacity tenders (which expired on 29 June), and also provides that failure to comply with commitments under a capacity tender for the injection of energy will not result in the expiry of the permits.

Royal Decree-Law 14/2022 expedites transmission and distribution procedures, so that modifications to transmission and distribution facilities that have obtained prior administrative authorisation are entitled to obtain administrative authorisation for construction without requiring a new prior authorisation when certain conditions are met.
Royal Decree-Law 18/2022 maximises the use of access capacity by allowing promoters with an access permit granted for a capacity lower than the installed capacity to exceptionally inject a higher capacity, provided that it is a node subject to a tender and until the tender is held. In the case of tenders, the reserved capacity will be maintained, even if the initial conditions for calling the tender are no longer fulfilled.

Other regulatory issues

Electric vehicle (EV) charging services: Royal Decree 184/2022, of 8 March, which regulates electric vehicle charging services, implements the regulatory framework for providing public EV charging services.

- It regulates the charging point operator (CPO) as the owner of the rights to operate the charging point (CP) infrastructure and the electric mobility service provider company (EMSP), which is a “virtual operator” that can act as a third party providing mobility services without being the owner or operator of the CP. It establishes the conditions for interoperability between those roles, and includes a series of obligations and rights for both.

- It establishes obligations to submit information (CP specifications, prices and real-time availability), which will be detailed in a Ministerial Order and which derive from the provisions of both the Electricity Sector Act and the Climate Change and Energy Transition Act (real-time information on CPs through the Directorate General of Traffic’s “Geoportal” system).

Incentives for renewable hydrogen: The IDAE has launched the first call for proposals for the H2 REN incentive programme for pioneering and unique projects (H2 Pioneers Programme) within the framework of the Recovery Plan. It has a budget of EUR 150 million and the maximum aid per project is set at EUR 15 million.

The IDAE Resolutions have also been published with the H2 REN Development Incentive Programme, with an endowment of EUR 250 million.

FNEE 2022 contributions: The Order establishing the contributions to the National Energy Efficiency Fund for 2022 has been published in the Official Spanish Gazette. As an innovation, it provides for the possibility of complying with the savings obligation on a voluntary basis by means of Energy Saving Certificates (ESC).

Active demand response service in the electricity market: Defined in Royal Decree-Law 17/2022:

- Mainland consumers of more than 1MW can opt to deliver reductions in remunerated demand (or increases in production, if available), in case of system need, for periods of up to three hours with 15 minutes’ notice.
- The allocation is carried out through annual auctions managed by the System Operator, with the implementation period running from November to October of the following year. The first auction will be held before 1 November this year.
• The availability of power to be reduced will be remunerated according to the result of the auction, and the actual reductions in demand required by the System Operator, pursuant to the prevailing tertiary regulation price.
• Financing is provided by all consumers, according to their consumption, and by those responsible for the balance, according to their deviations.

**New information on utility bills** (RD-Law 18/2022):

• Information on average consumption in the same postcode area, and energy saving and efficiency recommendations.
• Information on tax reductions introduced by the government and on the reduction in the Spot cost due to the application of the Iberian adjustment mechanism.
• Free market bills are standardised in terms of how they present the cost of the Iberian adjustment mechanism. If the retail supplier passes on the cost of the adjustment mechanism to the customer on a differentiated basis (not included in the electricity price), the bill must clearly state that the customer has opted for this option and report the average price of the adjustment in the last calendar month.

**Main and dominant energy operators:** The CNMC Resolutions of 24 November published the lists of main and dominant operators. IBERDROLA remains the dominant operator in electricity and a main operator in electricity and gas. In the LPG fuel sector, Repsol and CEPSA are the dominant operators and are once again main operators together with BP and Naturgy (LPG).

**Temporary levy:** Law 38/2022 of 27 December, on the establishment of temporary levies on energy companies and credit institutions, was published during the period. For companies in the electricity, gas and oil sectors, the levy is set at 1.2% of their turnover, on a temporary basis for the years 2023 and 2024, applying to companies with main operator status. Companies carrying out regulated remuneration activities are excluded from this tax.

**Transfers of funds from the General State Budget to the electricity sector:** Under Royal Decree-Law 14/2022, a transfer of EUR 1,360 million is to be made to the Regulated Activities Settlements to offset the loss of revenue due to the suspension of the Tax on the Value of Electricity Production. In Royal Decree-Law 20/2022, EUR 2,000 million are made available for the 2022 settlements to compensate for the reduction in charges and EUR 113 million to compensate for the reduction in tariffs for electro-intensive users. It also provides that any surplus in the 2022 settlements will be carried forward to 2023.

**Spanish gas sector**

**Consumer protection measures:** In the gas sector, price containment measures have also been adopted for consumers, materialised in the extension contained in Royal Decree-Law 11/2022 to the limitation of the increase in the last-resort tariff for gas included in Royal Decree Law 17/2021. This same Decree-Law extends the measures to make natural gas supply contracts more flexible, until the price of the daily product with delivery the following day at the Virtual Balancing Point, as published by the Iberian Gas Market (MIBGAS), remains below EUR 60 per MWh for ten consecutive daily trading sessions, and until 31 December 2022 at the latest. It also caps the maximum price of a cylinder of butane at EUR 19.95.
Royal Decree-Law 10/2022 provides aid to gas-intensive companies, which is extended to EUR 250 million under Royal Decree-Law 11/2022, including new sectors.

Royal Decree-Law 18/2022 creates a new transitional reduced tariff for residential communities with communal boilers, and extends the restriction on the increase in the LRT for gas, both until 31 December 2023. The possible deficit is covered by a EUR 3,000 million budget item in the General State Budget. The budget for the thermal bonus is also increased by EUR 225 million. The same Decree-Law also makes it easier to terminate gas contracts and associated additional services.

Other regulations published during the year include:

**Biogas Roadmap:** The Biogas Roadmap was approved. It identifies the challenges and opportunities for developing this renewable gas source and proposes a 3.8-fold increase in its production by 2030, exceeding 10.4 TWh.

### 3. United Kingdom

**Energy Bill:** In Summer 2022 a new Energy Bill was introduced to Parliament and started its progress through the House of Lords after which it will be considered by the House of Commons. The main provisions of the Energy Bill are (i) to promote low carbon hydrogen production by facilitating the introduction of a new business support model, (ii) to establish a new independent Future System Operator, providing strategic oversight across electricity and gas systems during the Net Zero transition, (iii) to provide for a new obligation to be placed on fossil fuel boiler manufacturers to scale up their production of heat pumps over time, and (iv) to provide for the introduction of competition in onshore electricity networks.

**Tariff cap:** As required under the Domestic Gas and Electricity (Tariff Cap) Act 2018, Ofgem (Office of Gas and Electricity Markets) implemented a new price cap for default tariffs, including Standard Variable Tariffs (SVTs), on 1 January 2019. Following a review of the methodology for setting the allowance for wholesale energy costs within the cap, to mitigate the impact of market volatility on suppliers, Ofgem published its decision in August 2022. With effect from 1 October 2022, different hedging assumptions apply and the tariff cap is adjusted every quarter, on 1 January, April, July and October (previously every 6 months). The Energy Prices Act which was enacted on 28 October 2022 removed the end date for the cap (previously end 2023) and gave the Secretary of State the power to terminate the tariff cap at any time. Ofgem issued a further consultation in November 2022 on its review of the EBIT margin allowance in the price cap methodology.

**Energy bill support:** The Government introduced three Government-funded schemes to help households and businesses with exceptionally high energy bills in the winter of 2022/23:

- An ‘Energy Bill Support Scheme’ (EBSS), whereby suppliers offer a £400 credit to domestic electricity customers over a six-month period (October 2022 to March 2023), worth £67 per month.
• An ‘Energy Price Guarantee’ (EPG) for household customers. This EPG caps a household’s energy bill at £2,500 between October 2022 and March 2023 and £3,000 between April 2023 and March 2024. It was complemented by direct government support for low-income households.
• An ‘Energy Bill Reduction Scheme’ (EBRS) for non-domestic customers. This scheme runs from October 2022 to March 2023 and allows suppliers to offer a discount on energy prices to non-household customers. In January 2023, the Government announced that the EBRS would be replaced by a new Energy Bill Discount Scheme (EBDS) from April 2023 to March 2024 which would offer a lower level of support than the current EBRS.

**RIIO-ED2**: The next five-year RIIO-ED2 distribution network price control will run from 1 April 2023 to 31 March 2028. Ofgem published its final determinations for RIIO-ED2 on 30 November 2022. Ofgem’s approach to the cost of capital was unchanged from the transmission network price control (RIIO-T2); based on latest market indices, this gave a cost of equity of 5.23% and average cost of debt of 3.07%.

**Contracts for Difference**: The UK Government progressed with its fourth Contracts for Difference (CfD) Allocation Round (‘AR4’) to support renewable generation, including offshore and onshore wind power and solar photovoltaics. The AR4 auction bid window closed on 15 June and the auction results were announced on 7 July 2022. In total, 93 CfD contracts were awarded, totalling 10.8GW of capacity. ScottishPower Renewables were awarded 16 contracts: East Anglia 3 (1.37GW), 5 onshore wind projects (totalling 396MW) and 10 solar PV projects (totalling 326 MW). The Government also announced a move towards holding future CfD allocation rounds on an annual basis starting with the next CfD auction – Allocation Round 5 – for which it is planning to open the eligibility window in March 2023. This will be based on two auction Pots: Pot 1 for ‘established’ renewable technologies, including fixed bottom offshore wind, onshore wind and solar PV; and Pot 2 for ‘less established’ renewable technologies, including floating offshore wind. However, the detailed final auction parameters and Budget Notice are still to be published.

**Electricity Generator Levy**: in November 2022 the UK Government announced the introduction of the infra-marginal Electricity Generation Levy (EGL), with application to renewable and nuclear generation from 1 January 2023 to 31 March 2028. It is a 45% levy on revenues from such generators above an annual benchmark of £75/MWh indexed to CPI inflation. This Levy rate does not apply to power sold under a Contract for Difference (CfD) with the Low Carbon Contracts Company Ltd (LCCC) but does apply to power sold on a merchant basis. The legislation implementing the Levy is expected to be enacted in Spring 2023.

4. **US law and regulations**

**Biden Administration**
During his second year in office, President Biden continued efforts to enhance federal investment in clean energy and critical infrastructure through new legislation and regulatory actions. Significant actions include advancing offshore wind leasing across both the Atlantic and Pacific coasts, example lease areas include the coasts of New York, New Jersey, central and northern California, and the Gulf of Mexico.

www.iberdrola.com
In September, the Department of Energy (DOE) opened applications for the $7 billion regional clean hydrogen hubs programme (H2Hubs) funded by the IIJA. Following the submission of concept papers in November, DOE sent notices to 33 (of 79) hydrogen hub applicants to formally “encourage” the submission of a full application for funding.

In November, DOE opened applications for the $10.5 billion Grid Resilience and Innovation Partnerships (GRIP) Programme, also funded by the IIJA. GRIP will focus on three areas: Grid Resilience Utility & Industry Grants ($2.5 billion), Smart Grid Grants ($3 billion), and Grid Innovation ($5 billion). Funding will be made available in tranches over the next few years with approximately $3.8B for FY23.

Separately, the Treasury Department issued initial guidance on the prevailing wage and apprenticeship requirements contained in the IRA, interim guidance on the new corporate alternative minimum tax (CAMT), and solicited comments on guidance to implement the IRA’s energy tax provisions.

**Congress**

In August, Congress passed and President Biden signed the $700B Inflation Reduction Act (IRA). The IRA provides new and extended long term tax credits for renewable energy deployment, including onshore/offshore wind, solar, storage, and green hydrogen. It also allows transferability of the tax credits, allowing a taxpayer to sell tax credits to another party for cash, and the direct payment of credits for clean hydrogen production. The IRA makes changes to corporate taxes imposing a 15% Alternative Minimum Tax on adjusted financial statement income for corporations with $1B+ in profits ($100M+ if foreign-parented). Implementation of the IRA tax provisions will require U.S. Treasury guidance, which could take up to one year and is subject to additional analysis and review.

In November, Congressional midterm elections were held. In the Senate, Democrats gained one seat, retaining their narrow majority (51-49). In the House, Republicans were able to secure a narrow majority (222-213). The divided government lowers the likelihood of new major legislation in 2023 and 2024.

**Tariffs**

In December, the Department of Commerce issued an affirmative preliminary determination in a solar circumvention investigation, in which Auxin Solar claimed that solar cells and modules imported from Cambodia, Malaysia, Thailand and Vietnam were avoiding duties on Chinese goods. The preliminary determination only identified four producers that were deemed to not be circumventing. All other producers in the four countries would be subject to duties after the Presidential Proclamation expires on 6 June, 2024. The final determination is expected in May and may result in additional changes.

On 21 June, the Uyghur Forced Labor Prevention Act went into effect. U.S. Customs and Border Protection (CBP) is now operating under the presumption that imports of all goods manufactured wholly or in part in the Xinjiang region, including solar panels and component parts, are made with forced labour and are prohibited from entry into the United States. Importers must prove otherwise in order to import products from the Xinjiang region.
FERC

In December, FERC Chair Richard Glick departed the Commission after Senate Energy and Natural Resources Committee Chair Joe Manchin (D-W. Virginia) declined to hold a hearing on Glick’s renomination. Glick’s departure leaves FERC with four Commissioners, evenly split between Democrats and Republicans. President Biden has named Commissioner Willie Phillips as Acting Chairman until the Administration is able to nominate and confirm a permanent chair.

On 15 December, FERC unanimously opened a rulemaking to address its backstop siting authority for transmission networks. The proposal includes requirements for developers to engage with landowners near potential transmission lines before they can acquire a right-of-way. FERC is aiming to revise as needed and finalize the rule in 2023. Additionally, FERC directed the North American Electric Reliability Corporation (NERC) to assess potential new requirements for safeguarding electric transmission stations and substations in light of the recent attack on a substation in North Carolina.

On 30 November, FERC approved 4 – 0 a plan by PJM Interconnection to address a significant backlog of energy projects waiting to connect to the grid. Going forward, PJM will prioritize projects which are ready to enter operation instead of when they were filed.

New York – CLCPA Implementation Targets

In September 2021, the NYPSC published an Order to implement the Accelerated Renewable Energy Growth Act designed to meet the objectives of the New York Climate Leadership and Community Protection Act (CLCPA). Based on this order, in January 2022, NYSEG applied to the NYPSC for approval for 23 projects to improve grid reliability and increase grid capacity by 2.8 GW with a view to facilitating the connection of renewables between 2025 and 2029 for an investment of USD 1,900 million. Subsequently, in March 2022, NYSEG applied to the NYPSC for a second phase, with the aim of increasing grid capacity by 2 GW, with an investment of USD 2,250 million.

At the end of 2022, the NYPSC approved a USD 98 million package for NYSEG to fund the early stages of development of 27 projects aimed at achieving the goals of the CLCPA.

New York – Delinquency relief for vulnerable customers

The Governor of New York signed off on a series of measures to reduce the utility debt of vulnerable customers (estimated at USD 590 million across New York). Approval was granted to include a USD 250 million provision in the state’s general budget to finance part of the debt, and the remaining amount was authorised to be pooled among all New York consumers, so that companies can recover it via bill charges.

New York – Rate Case

On 26 May, NYSEGR and RGE submitted their proposed rate review for the period May 2023 – April 2024 to the New York Public Service Commission (NYPSC). The NYPSC Staff replied in September, proposing certain modifications to the requested rate increase. The final amount of the increase is currently being negotiated with the NYPSC Staff, as well as the possibility of setting 3-year rates (May 2023 – April 2026), which would allow the agreed rate increase to be rolled forward.
**Maine – Withdrawal of 100 bp ROE adjustment**

On 17 February 2022, the Maine Regulatory Commission withdrew a 100bp ROE adjustment from CMP (effective March 2020) after finding that the company was meeting its quality of supply and quality of service targets.

**Maine – New standards of service**

A new bill was passed in May 2022 to guarantee the quality of service provided by operators. This bill calls for new metrics to be developed to monitor the reliability of the grid, the quality offered to customers and distributed generation connectivity. It also provides that fines collected for breaches of these standards should be reallocated to vulnerable customers.

**Maine – CMP Rate Case**

On 11 August 2022, CMP submitted its proposed rates for the July 2023 – June 2026 period to the Maine Regulatory Commission (MPUC). The MPUC Staff held a positive view of the proposal, but was concerned about the lack of mechanisms to monitor compliance with a multi-year agreement (rates approved in recent years had a one-year time horizon). On 7 February, CMP submitted its response to the Staff’s assessment, including a proposal for compliance monitoring mechanisms.

**Connecticut – EV Charging Program**

The Connecticut regulator has launched the first phase of its plan to roll out an electric vehicle charging infrastructure. In this first phase, with a three-year term (2022-2024), distributors will process the granting of subsidies for the installation of charging points. Meanwhile, UI-D will manage an amount of USD 18 million, which will be recovered through tariffs.

**Connecticut – Innovative Energy Solutions Program**

The Connecticut regulator has announced the launch of the Innovative Energy Solutions (IES) programme, allocating USD 89.6 million over 2023-2026 to developing grid modernisation projects and innovative products and services for customers.

**Connecticut – Bill Reduction Plan for vulnerable customers**

On 2 December 2022, the Governor of Connecticut unveiled a package of measures to mitigate rising electricity bills as a result of higher energy prices:

- UI will contribute USD 3 million to help pay vulnerable customers’ bills and bring forward to 1 January the repayment of a regulatory liability for power purchases under the Power Purchase Agreement (PPA) system (USD 28 million for UI).
- In addition, work will continue on designing a rate aimed at vulnerable customers that can be applied in 2023.

**Connecticut – UI Rate Case**

On 9 September 2022, UI submitted its proposed rates for the period September 2023 – August 2026 to the Connecticut Regulatory Commission (PURA). UI aims to improve customer service by increasing the reliability, resilience and intelligence of its networks by implementing a number of programmes that require rate increases of 5% per annum. The Office of Consumer Counsel (OCC) raised objections to the UI proposal, requesting certain adjustments thereto. UI has rebutted the OCC’s submissions by reiterating its initial proposal.
**Berkshire Gas Rate Case 2023-2025**
In October 2022 the Connecticut regulator ratified the agreement reached with the Attorney General for BGC’s new rates (Rate Case 2023-25). Highlights include an approved ROE of 9.70% and an Equity Factor of 54%.

**FERC**
On 21 April 2022, FERC passed (with four votes in favour and one against) a proposal for a regulation on transmission planning and cost allocation. The proposal will require transmission grid owners to engage in long-term planning (at least 20 years) that addresses future energy generation mixes, especially renewables.

On 16 June 2022, FERC unanimously approved a proposed bill to accelerate the current grid connection process for new electricity generation facilities, primarily wind and solar. The proposal seeks to address backlogs in interconnection procedures, providing greater certainty and avoiding undue discrimination against new generation.

5. **Mexico**

**Regulatory environment in Mexico**

**Reform to amend the Electricity Industry Act:** This reform, published in March 2021, aims to prioritise the dispatch of CFE’s energy over that of the private sector and at the same time restrict the development of new private projects. The measures have a negative impact on renewable energies and distort free competition in the electricity market.

The aggrieved parties have lodged legal appeals, most of which are still pending decisions. Iberdrola México has filed suits to seek protection of its constitutional rights (amparo proceedings), obtaining binding injunctions temporarily suspending its application. A group of senators filed an action of unconstitutionality and the Federal Economic Competition Commission filed a constitutional complaint. The Supreme Court of Justice of the Nation (SCJN) delivered a ruling on both appeals in April 2022, finding that there were no elements to declare the reforms unconstitutional. Until such time as this ruling was issued, the amparo proceedings brought by private parties were stayed. On 17 October 2022, the SCJN lifted the suspension, resuming the proceedings to resolve these lawsuits. On 25 January 2023, the Second Chamber of the SCJN decided to review two amparo actions brought by private parties against the Electricity Industry Act Reform, and the outcome of these court proceedings will be known in the next few months.

The stay granted to Iberdrola Mexico has remained in force and is awaiting resolution of the proceedings in the coming months.

**Mexico announces new climate commitments.** In the context of COP 27, Mexico pledged to increase its Nationally Determined Contribution (NDC) to reduce its CO₂ emissions by 35% by 2030. This commitment entails adding the 40 GW of new renewable capacity that will be needed to meet this target.
SENER’s Natural Gas Strategy. On 13 June 2022, the Energy Secretariat (SENER) issued the Natural Gas Supply Strategy to optimise the capacity of the National Integrated Natural Gas Transport and Storage System (SISTRANGAS). The Strategy aims to compel users of SISTRANGAS or private pipelines that connect to this system to prove that their gas originates from the Federal Electricity Commission or Petróleos Mexicanos.

The Federal Economic Competition Commission filed a constitutional complaint against SENER’s strategy before the SCJN, obtaining a provisional suspension on 6 September 2022. As a result of the dispute, the SCJN confirmed the suspension as definitive pending the resolution of the merits of the case.

T-MEC consultation on Mexico’s energy policy. In July 2022, the United States and Canada announced a T-MEC consultation with the Mexican government on possible infringements of energy commitments, particularly in the areas of electricity, oil and natural gas. Consultations are ongoing and it is expected that an amicable solution will be reached or an arbitration panel will be opened in the course of 2023.

On 10 and 11 January 2022, the tenth North American Leaders’ Summit took place, but despite the expectation that the issue would be on the agenda, no formal agreement was reached in this regard. The option of initiating arbitration remains open.

Renewables business and Customers

Regulations of a general nature

– Conventional transmission tolls. In May 2020, the regulator approved the increase of the transmission tariffs (energy tolls) for conventional self-supply technologies. IBERDROLA filed an injunction and requested interim measures, which were denied. In December 2021, the first instance judgement dismissing the amparo was published. An appeal for review of this decision has been lodged and is due to be resolved in the coming months.

– Transmission charges. On 8 September 2022, IBERDROLA was granted injunctive relief against the increase in transmission charges published in May. This increase affects renewable power plants and efficient cogeneration in self-supply. The CRE appealed the injunction and is awaiting the second instance ruling.

6. Brazil

Legal framework for mini and micro distributed generation On 7 January 2022, Law 14,300 was published, which established the legal framework for mini and micro distributed generation (MMDG). It was established that units that already have MMDG and those that join within 12 months of the publication of this law will retain the current benefit until December 2045. For consumers joining after 12 months, a transition rule has been established with staggered partial charges each year until full collection of the tariff components aimed at compensating the distributors (TUSD Fio B) is reached in 2029. A grant to supplement with resources from the Energy Development Account (EDC) will be made available during the transition.
**Water Scarcity Account:** On 14 January, Decree 10,939/2022 was published, authorising the creation of the Water Scarcity Account by the Electricity Retail Supply Chamber (CCEE). This account was earmarked to receive resources to cover all or part of the additional costs stemming from water scarcity for distributors, as well as the payment deferrals established in the latest pricing processes associated with macroeconomic issues (inflation, exchange rates and high international fuel prices). On 18 March, ANEEL defined the criteria and procedures for managing the Account and in May (1st transfer) BRL 371.6 million was released to Neoenergia's distributors.

**Legal framework for offshore generation:** On 25 January, Decree 10,946/2022 was published, regulating the transfer of the use of physical space and the use of natural resources for offshore energy generation. This energy generation will be exploited by means of an assignment of use agreement, which may be for a fee (operation of the power plant) or free of charge (technological R&D activities). On 20 October, Regulatory Ordinance 52/GM/MME was published, establishing the procedures for the transfer for valuable consideration and delegating authority to ANEEL to sign the assignment of use agreement. The Single Portal for the Management of the Use of Offshore Areas for Generation and Energy was also created through Inter-ministerial Ordinance MME/MMA no 3, which will consolidate all the services for offshore energy production permit applications and monitoring.

**Updating of the WACC 2022:** On 23 February, ANEEL published Order 544 updating the values of the regulatory Weighted Average Cost of Capital (WACC) of the Generation, Transmission and Distribution segments applied to the processes examined from March 2022 to February 2023. The WACC (net after tax) applied to distributors in the period was 7.15%, while in 2021 it was approximately 7.02%. For listed distributors and plants it was 6.93%, while in 2021 it was approximately 6.76%.

**Water Scarcity Charge:** In April, the Electricity Sector Monitoring Committee (CMSE) established that as of 16 April the Water Scarcity Charge would be lifted. The Chamber for Hydropower Exceptions (CREG) had previously introduced this charge to cover the additional costs of combating water scarcity.

**Neoenergia Coelba and Neoenergia Cosern tariff adjustments:** In April, ANEEL's Board of Directors published the tariff adjustment for Coelba and Cosern, effective as of 22 April 2022. The average impact for Coelba consumers was 21.13% (20.54% for high and medium voltage and 21.35% for low voltage) and for COSERN it was 20.36% (19.75% for high and medium voltage and 20.55% for low voltage).

**Tariff adjustment at Neoenergia Pernambuco:** In April, ANEEL's Board of Directors published the tariff adjustment for Neoenergia Pernambuco, effective as of 29 April 2022. The average impact for consumers was 18.98% (19.01% for high and medium voltage and 18.97% for low voltage).

**New Energy Auction “A-4”:** On 27 May, the new energy auction A-4 for 2022 was held for the procurement of energy from hydroelectric, wind, solar photovoltaic and biomass thermolectric projects, with supply starting in January 2026. This resulted in 29 winning projects, totalling almost 950 MW of installed capacity and 237.5 MW of average contracted power.
ICMS ceiling for essential services: On 23 June, Supplementary Law 194/2022 was published, fixing a ceiling for the ICMS tax on the fuel, gas, electricity, communications and public transport sectors. The text limits taxation to 18% when such services are classified as essential and provides for ICMS to be waived for transmission and distribution services and their respective charges.

ICMS credits under PIS/COFINS: On 28 June, Law 14,385/2022 was published, which regulates the refund of tax amounts collected in excess by electricity distribution public service providers as a result of the ICMS assessment on PIS and Cofins tax bases. On 13 July, Authorisation Resolutions 3055, 3056 and 3057, respectively, were published for Neoenergia Pernambuco, Neoenergia Coelba and Neoenergia Cosern, resulting from the Extraordinary Rate Review triggered by the application of the Law. The average impact for Neoenergia Pernambuco consumers was -4.07%, for Neoenergia Coelba -0.50% and for Neoenergia Cosern -1.54%.

Updates to the additional values of the Rate Flags: Authorisation Resolution 3051/2022, published by ANEEL on 29 June, established the new additional values of the Rate Flags for the period from July 2022 to June 2023. The Yellow Flag was readjusted from BRL 18.74/MWh to BRL 29.89/MWh (up by 59.5%). Red Flag Level 1 was readjusted from BRL 39.71/MWh to BRL 65.00/MWh (up by 63.7%). Lastly, Red Flag Level 2 was readjusted from BRL 94.92/MWh to BRL 97.95/MWh (up by 3.2%).

Transmission Auction no 1/2021: On 30 June, transmission auction no 1/2022 was held, with 13 lots tendered and an average reduction of 46.16%. Neoenergia was awarded two lots: (i) Lot 2: for the implementation of substations and transmission lines in the states of Minas Gerais and São Paulo, with a bid value of BRL 360 million (50% reduction), an estimated investment of BRL 4,940 million and a completion period of 60 months; (ii) Lot 11: substations and transmission lines in the state of Mato Grosso do Sul, with a bid value of BRL 38.2 million (45.74% reduction), an estimated investment of BRL 500 million and a completion period of 48 months. On 30 September 2022, the public power transmission service agreements were signed between the Federal Government and Neoenergia.

Admissibility of the extraordinary tariff review (Covid-19): On 15 July, Communication 1890/2022 (SGT/ANEEL) was published, recognising the admissibility of applications for extraordinary tariff revisions due to the Coronavirus pandemic from seven energy distribution operators, including Neoenergia Pernambuco, Neoenergia Coelba, Neoenergia Cosern and Neoenergia Brasília. ANEEL indicated that a process had been opened to analyse the merits of the applications. The next steps will be for the technical area to present the proposal and for the public consultation to be opened.

On-line loan of EDC resources: On 22 July, ANEEL published Order 1,959, which fixed the amounts contributed to the Energy Development Account (CDE) by Eletrobras. This resource was transferred to the CDE in accordance with the mandate contained in Law 14,182/2021 (privatisation of Eletrobras), which made the grant of new concessions conditional upon Eletrobras or its subsidiaries paying the CDE 50% of the value added to the concession under the new contracts. On 27 July 2022, Neoenergia’s distribution companies received a total of BRL 829.38 million, which represents approximately 15.72% of the total distributed.

www.iberdrola.com
Neoenergia Elektro rate readjustment: In August, the Management of ANEEL published the Neoenergia Electro rate readjustments, applicable as of 27 August 2022. The average impact for consumers was 15.77% (23.72% for high and medium voltage and 11.61% for low voltage).

Changes in the TUST calculation method: Regulatory Resolution 1021/2022 abolished the transition period envisaged for calculating the Transmission System Use Tariff (TUST) for generators whose TUST had previously been established on the basis of Regulatory Resolution 267/2007. Subsequently, Regulatory Resolution 1024/2022 established the end of tariff stabilisation for generators while at the same time creating the Tariff Development Mechanism. This mechanism seeks to avoid excessive volatility in the annual recalculation of the TUST for generators. ANEEL Regulatory Resolution 1041/2022 was published on 23 September 2022, following phase three of Public Consultation 39/2021, aimed at improving the regulation on the Local Signal of Transmission System Use Tariffs (TUST) and Distribution System Use Tariffs for generation plants connected at 88 kV and 138 kV (TUSDg). The decision was taken to progressively intensify the localisation signal over five tariff cycles.

Liberalisation of the high-voltage market: On 28 September, Ministerial Order 50/GM/MME was published, stipulating that, as of 1 January 2024, high-voltage consumers may choose to purchase electricity from any operator, permit holder or authorised energy supplier in the National Interlinked System (SIN). Those with an individual load of less than 500 kW are required to be represented by a retail agent before the CCEE.

Reserve Capacity Auction – Energy: The Reserve Capacity Auction was held on 30 September in the form of energy from natural gas-fired thermoelectric generation companies under the terms of Article 20 of Law 14,182 of 2021. Contracting of 2,000 MW was envisaged, with 1,000 MW destined for the Northern Region, to start supplying on 31 December 2026, and 1,000 MW destined for the Northeast Region, to start supplying on 31 December 2027. This resulted in an average of 669.5 MW contracted in the North Region product alone, through three thermoelectric plants (UTE Manaus, Azulão II and Azulão IV). There was no reduction in relation to the initial price of BRL 444/MWh.

New Energy Auction “A-5” 2022: On 14 October, New Energy Auction “A-5” 2022 was held, which concluded with the contracting of 176.8 MW of average power and an average price of BRL 237.48/MWh (discount of 26.38%). This was the first tender to include the reservation of 50% of the demand for small hydroelectric power plants (PCHs and CGHs), according to Law 14,182 (privatisation of Eletrobras). The source had a discount of 20.46% in relation to the initial price of BRL 352/MWh, contracting 12 plants and providing 101.6 average MW of physical guarantee.

Neoenergia Brasilia rate adjustment: In April, the Board of Directors of ANEEL published the Neoenergia Brasilia rate readjustment, applicable as of 3 November 2022. The average impact for consumers was 22.55% (24.94% for high and medium voltage and 21.58% for low voltage). At the end of October, the Federal District Government published Decree 43,893, regulating the exemption of ICMS in the Distribution System Use Tariff, provided for in Complementary Law 194/2022. Overall, considering the reduction in the ICMS calculation base, the average impact on consumers was 11.17%.
Review of physical guarantees of hydroelectric power plants: On 2 December, the Ministry of Mines and Energy (MME) published Ordinance 709/2022, which contains the new values for the physical guarantee for hydroelectric power plants, effective as of 1 January 2023. The review covered 120 plants dispatched centrally by the National System Operator (ONS). In Neoenergia’s case, the following plants were eligible for the new values: Baguari (readjustment from 84.7 to 81.9 average MW), Corumbá III (readjustment from 49.3 to 47.0 average MW), Dardanelos (readjustment from 154.9 to 147.2 average MW), Itapebi (readjustment from 209.1 to 202.1 average MW) and Teles Pires (readjustment from 939.4 to 964.2 average MW).

Pending transmission concessions: On 29 December, Decree 11,314 was published, regulating the rules for tendering and extending transmission concessions at the end of their term. Under the Decree, compensation for the non-depreciated assets of the expiring concession must be paid by the winner of the auction to the former operator as a condition for signing the new contract. The tender notice may provide for a transitional period, after the date of execution of the agreement and at the discretion of the successful bidder, for the transfer of assets and the takeover of the concession service. The Decree also states that it is up to the licensing authority to decide on the possible extension of existing concessions, provided that the bidding process is found to be unworkable or detrimental to the public interest. The Neoenergia group’s Afluente T transmitter is on list of concessions that expire on 8 August 2027.
CONSOLIDATED MANAGEMENT REPORT 2022
This management report has been prepared taking into consideration the “Guide of recommendations for the preparation of Management Reports of listed companies”, published by the CNMV in July 2013.

1. COMPANY OVERVIEW

1.1 Purpose and Values of the IBERDROLA Group

IBERDROLA's corporate purpose, which is aligned with the Sustainable Development Goals of the United Nations 2030 Agenda, reflects the main trends in society and addresses significant economic, social and environmental challenges, while mirroring stakeholder expectations and defining IBERDROLA's role as an agent of social change and transformation in the energy sector. It is articulated in the maxim: “To continue building together each day a healthier, more accessible energy model, based on electricity”.

This purpose expresses:

• The IBERDROLA Group's commitment to the well-being of people and the preservation of our planet.

• The IBERDROLA Group’s commitment to a real and comprehensive energy transition which, based on the decarbonisation and electrification of the energy sector and of the economy as a whole, contributes to the Sustainable Development Goals (SDGs), in particular, with regard to the fight against climate change and generates new opportunities for economic and social development.

• The realisation that an energy model increasingly based on electricity, forsaking the use of fossil fuels to make wider use of renewable energy sources, efficient energy storage, smart grids and digital transformation is also healthier for people, whose wellbeing depends on the environmental quality of their own surroundings.

• The aspiration that the new energy model will also be more accessible to all and favour inclusiveness, equality, equity and social development.

• The resolve to promote this new model in collaboration with all the players involved and with society as a whole.

To achieve this Purpose, the IBERDROLA Group has consolidated its corporate values into the following concepts:

• **Sustainable energy**: the group aims to inspire by creating economic, social and environmental value for all the communities in which it operates and with the future firmly in mind.

• **Integrating force**: the group works with great strength and a deep sense of responsibility, combining talents towards a Purpose that will benefit everyone involved.

• **Driving force**: the group makes small and large changes a reality with the aim of making people's lives easier, while being efficient and highly self-demanding, always in pursuit of continuous improvement.
IBERDROLA firmly believes that the transition to a carbon neutral economy by 2050 is technologically possible, economically viable and socially necessary. The decarbonisation of the economy is a unique opportunity to create wealth, generate jobs, improve the state our planet and benefit people's health. This is why the group is committed to spearheading the energy transition, a journey it embarked on 20 years ago and which has led it to invest EUR 120,000 million in that period.

This commitment will be achieved by fostering:

- Decarbonisation of electricity
- System integration through networks
- Electrification of the demand side

A business model that accelerates the creation of value for everyone

1. Meeting the expectations of its Stakeholders
2. Investment is focused on regulated businesses or businesses with long-term contracts, which provide consistent and recurring cash flows.
3. Accelerating the growth of renewable activities, mainly offshore wind, photovoltaic and green hydrogen production, to meet established decarbonisation targets.
4. Geographical diversification, with presence in a growing number of countries.
5. The dividend policy is geared towards a reliable and growing dividend in line with the increase in the company's earnings.
6. Maintaining a solid financial position, allowing investment targets to be met.

1.2 Business model

IBERDROLA firmly believes that the transition to a carbon neutral economy by 2050 is technologically possible, economically viable and socially necessary. The decarbonisation of the economy is a unique opportunity to create wealth, generate jobs, improve the state our planet and benefit people's health. This is why the group is committed to spearheading the energy transition, a journey it embarked on 20 years ago and which has led it to invest EUR 120,000 million in that period.

This commitment will be achieved by fostering:

- Decarbonisation of electricity
- System integration through networks
- Electrification of the demand side

A business model that accelerates the creation of value for everyone

1. Meeting the expectations of its Stakeholders
2. Investment is focused on regulated businesses or businesses with long-term contracts, which provide consistent and recurring cash flows.
3. Accelerating the growth of renewable activities, mainly offshore wind, photovoltaic and green hydrogen production, to meet established decarbonisation targets.

4. Geographical diversification, with presence in a growing number of countries.

5. The dividend policy is geared towards a reliable and growing dividend in line with the increase in the company's earnings.

6. Maintaining a solid financial position, allowing investment targets to be met.

1.3 Presence and areas of activity

With a track record that spans over 170 years, today the IBERDROLA Group is a worldwide leader in the energy sector, the world leader in wind power production and one of the world’s largest electric companies by stock market capitalisation. IBERDROLA has a 20-year head start in the energy transition to address the challenges of climate change and offer a sustainable and competitive business model that creates value for society.

The Group supplies energy to around 100 million people in dozens of countries, has more than 600,000 shareholders and a workforce of more than 40,000 people, and holds more than EUR 155,000 million in assets.

We lead the energy transition towards a sustainable model through investments in renewables, smart grids, large-scale energy storage and digital transformation to offer cutting-edge products and services to our customers.

IBERDROLA and its subsidiaries and affiliates conduct their activities in almost 30 countries. The Group concentrates a substantial part of its activity in Spain, the United Kingdom, the United States, Brazil and Mexico; as well as in Germany, Portugal, Italy, France, Ireland and Australia. It has also signed several agreements to start developing offshore wind projects in new markets: Sweden, Poland, Japan, Taiwan, Vietnam, etc.

The General Corporate Governance Policy contains a summary of the basic principles regulating the corporate governance of the Company and the Group and of its most important components. They are all available on www.iberdrola.com.

1.4 Main products and services

The main product that IBERDROLA makes available to its customers is electricity through a wide range of products, services and solutions in the fields of:

- Renewables, wind (onshore and offshore), hydroelectric and photovoltaic.
- Electricity and gas transmission and distribution.
- Storage both at large scale, through reversible hydropower, in grids and generation assets, and at end-user level.
- New technologies, such as Hydrogen from clean energy sources.
• Electricity and gas retail supply.
• Energy services for our customers: with innovative Smart solutions in the following areas:
  ◦ residential, with services including energy storage, heat pumps, self-consumption, electric mobility, solar, etc.
  ◦ industrial: offering comprehensive management of energy facilities and supply, such as Green H2, Industrial Heat, etc.
• Sale and purchase of electricity and gas in wholesale markets.
• Digitalisation: implementing it across its assets to improve the quality, efficiency and security of electricity supply.

With regard to its customers, IBERDROLA operates under an organisational structure in which:

• the Networks business manages distribution activities in Spain and transmission and distribution activities in the United Kingdom, the United States and Brazil, as well as regulated energy retail supply in the United States and Brazil and any other regulated activity that the group carries out in these four countries.
• the Renewables and Sustainable Generation business, manages long-term power purchase agreements (PPAs) with large enterprises and/or governments in Spain, the United Kingdom, the United States, Mexico, Australia and France.
• the Customers business manages non-regulated activities in Spain, the United Kingdom, Brazil, Mexico, Ireland, the United States and continental Europe.

1.5 Corporate and governance structure, ownership and legal form

IBERDROLA is an independent public limited company with registered offices in Bilbao (Plaza Euskadi, number 5), incorporated under Spanish law and listed on the Stock Market. It is the holding company of an international group present in Spain, the United Kingdom, the United States, Brazil, Mexico, other member states of the European Union, Portugal, France, Germany, as well as Australia, among other countries.

Through its country subholding companies and head of business companies, the group combines a decentralised structure and management model with coordination mechanisms designed to ensure the overall integration of all businesses through an effective system of separation of functions, checks and balances and supervisory controls. In addition, the Governance and Sustainability System contains measures granting the listed country subholding companies a special framework of strengthened autonomy.
The corporate and governance structure of the IBERDROLA Group is set out in the following diagram:

### 1.6 Organisation of the board, or of the bodies to which it delegates its decision-making, including control functions and the policy followed with the group’s minority shareholders

A comprehensive description of the governance structure of the Company and of the functions and internal regulations of the committees can be found in section C of the Annual Corporate Governance Report, which forms part of this Management Report.

### 1.7 Regulatory framework for the activities

A comprehensive description of sector regulations and of the operation of the electricity and gas system in the markets in which the Group operates can be found in Appendix II (“Sector regulation: most significant regulatory developments in the year”) to the Financial Statements.
1.8 Strategic pillars for the 2023-2025 period

More than two decades ago, IBERDROLA anticipated that climate change would be one of the most significant challenges of our time and adapted its business model to this reality. Since then, IBERDROLA has invested more than EUR 140,000 million with the goal of achieving a more secure, competitive and decarbonised energy model based on electrification.

In this context, IBERDROLA’s vision rests on four pillars:

• The need to combine the decarbonisation process of the economy with increasing self-sufficiency in energy.

• Ongoing focus on technological innovation in all its areas of activity.

• Addressing new consumer demands for value-added energy services, delivered through the possibilities afforded by digitalisation.

• Maintaining a sound financial structure.

These trends place electricity at the very heart of the energy transition: sustained demand growth due to the electrification of all energy end-uses will substantially raise the overall share of electricity in the energy matrix.

To meet this growing demand, it will be essential to increase investment in renewables which, according to the International Energy Agency, could reach two thirds of total electricity generation by 2040. The integration of renewables will also require efficient, smart and flexible transmission and distribution networks, as well as energy storage infrastructure.

Tackling the challenge of full decarbonisation will also require maximising the use of other clean energy carriers, such as green hydrogen, for sectors where electrification is challenging.

Against this background, IBERDROLA’s presence in markets that combine a high credit rating with significant demand growth prospects will enable it to continue consolidating its leadership the renewable generation, networks and storage businesses.

2023-2025 Plan

The global crisis triggered in 2022 by the invasion of Ukraine has made it more apparent than ever that electrification needs to be ramped up as the most efficient way to reduce fossil fuel dependence. In the same vein, the revised Strategic Plan for the 2023-2025 period envisages investments of EUR 47,000 million to propel the energy transition. Of this total, EUR 27,000 million will be allocated to the Networks business to reach an asset base of EUR 56,000 million by 2025.
Renewable investments, meanwhile, will attain EUR 17,000 million, with growth targeted at high quality projects offering the best risk/return ratio. Of this total, 46% will go to consolidating our pioneering position in offshore wind, with investments in France, Germany, the United Kingdom and the United States; 25% to onshore wind; 24% to solar PV; and 5% to pumped-hydro and battery storage.

With these investments, the Group's installed renewable capacity will increase by 12,100 MW –3,100 MW onshore wind, 6,300 MW solar PV, 1,800 MW offshore, 700 MW batteries and 200 MW pumped-hydro storage—, reaching 52,000 MW by 2025.

By geographical area, the United States will be the main investment target, with 47% of the total. This amount includes both organic investments and the integration of the New Mexico and Texas power company, PNM Resources. The remaining 53% will be invested in the United Kingdom (16%), Spain (13%), Latin America (11%), other European markets such as Germany and France as well as Australia (13%).

These investments are expected to enable IBERDROLA to achieve an EBITDA of between EUR 16,500 and 17,000 million by 2025 –an average annual growth of between 8% and 9%– and a net profit of between EUR 5,200 and 5,400 million by 2025 –for an average increase of between 8% and 10%.

The Plan combines growth with improvements in financial soundness and steady credit rating levels. To this end, IBERDROLA will continue to diversify its sources of financing, particularly green or sustainable funding, and minimise financial risk (75% of debt is fixed-rate and long-term). In addition, active liquidity management will be reinforced.

Cash generation, financial discipline and asset rotation will enable IBERDROLA to meet the plan by 2025 without the need for capital increases and to achieve a net debt/EBITDA ratio of 3.4x by the end of the period.

And, naturally, IBERDROLA will stand by its policy of increasing shareholder remuneration in line with earnings performance, allocating between 65% and 75% of profits to pay out dividends. According to our estimates, this will allow us to deliver a dividend of between EUR 0.55 and EUR 0.58 per share in 2025. Moreover, the Company has set a minimum dividend level per share of EUR 0.46 in 2023 and 2024 and EUR 0.50 for 2025. Lastly, the Iberdrola Retribución Flexible programme, which includes the repurchase of shares in order to maintain a fixed number of shares in circulation, is scheduled to continue.

As a result of its social dividend commitment, this Strategic Plan fully integrates environmental and social factors. We plan to make 12,000 new recruitments over the next three years and continue ramping up procurement of goods and services to support more than 500,000 jobs globally across our supply chain by 2030.

In terms of climate change, the Company aspires to be carbon neutral by 2030 in its generation plants and own consumption, and to achieve Net Zero emissions by 2040. Furthermore, IBERDROLA has set itself the goal of having a net positive impact on biodiversity by 2030 through various plans, including an initiative to plant 20 million trees by 2030.
This section of IBERDROLA’s Management Report, Strategic pillars for the 2023–2025 period, contains forward-looking information, including financial projections and estimates and their underlying assumptions, statements regarding plans, objectives and expectations with respect to future operations, capital expenditures, synergies, products and services, and statements regarding future results or directors’ estimates which are based on assumptions that are considered reasonable by them.

Although IBERDROLA believes that the expectations reflected in such forward-looking statements are reasonable, investors and holders of IBERDROLA shares are cautioned that forward-looking information and statements are subject to various risks and uncertainties, many of which are difficult to predict and generally beyond the control of IBERDROLA, which risks could cause actual results and developments to differ materially from those stated in, or implied or projected by, the forward-looking information and statements.

Forward-looking statements are not guarantees of future performance and have not been reviewed by the auditors of IBERDROLA. You are cautioned not to make decisions based on forward-looking statements, which speak only as at the date they were made. The forward-looking statements included in this report are expressly qualified in their entirety by the cautionary statement above. All forward looking statements included herein are based on the information available as at the date of this management report. Except as required by applicable law, IBERDROLA undertakes no obligation to publicly update its statements or to revise any forward-looking information even if new data are published or upon the occurrence of future events.

2. BUSINESS PERFORMANCE AND RESULTS

2.1 Global environment

a) Currency performance

In 2022 the exchange rates of IBERDROLA’s main reference currencies the US dollar, the pound sterling and the Brazilian real depreciated against the euro by 12.4%, 0.8% and 17.3%, respectively, which overall resulted in a higher EBITDA of EUR 736 million and a higher Net profit of EUR 87 million.

b) Demand

With regard to the evolution of demand in the period in the company’s main areas of activity:

- Key points in the Energy Balance of the mainland system in 2022 were: an increase in combined cycle (+61%), coal (+56%), solar (+30%), wind (+1%) and nuclear (+4%) production compared to the same period of the previous year, as against a decrease in hydroelectric production (-40%).
Demand in 2022 was down 2.9% on the previous year which, in labour- and temperature-adjusted terms, translates into a drop of 3.9%. The fourth quarter of 2022 ended with a producibility index of 0.7 and hydro reserves at 44%, compared with an index of 0.9 and reserve levels of 36% for the same period in 2021.

- In the United Kingdom, electricity demand was down 4.1% compared to 2021 while conventional gas demand fell by 5.8%.
- In the areas where Avangrid operates on the east coast of the United States, electricity demand was slightly up (+0.1%), while gas demand was up 5.7% compared with 2021.
- The demand in Neoenergia’s areas of operation in Brazil was up by 0.4% on 2021.

c) Emissions

By the end of 2022, the IBERDROLA Group’s direct emissions totalled 59 gCO₂/kWh in Europe (61 gCO₂/kWh in 2021) and 88 gCO₂/kWh globally (96 gCO₂/kWh in 2021).

2.2 Operating performance in the period

2.2.1 Networks business

During the financial year 2022, total electricity distributed by the Group amounted to 235,507 GWh, down 0.9% compared to the previous year. Only Brazil increased its emissions, following the integration of Neoenergia Brasilia in March 2021, with 2022 being a complete year.

#### 2.2.1.1 Spain

The IBERDROLA Group has 11.36 million supply points, slightly above the figure reported at the end of the previous year. Total energy distributed came to 89,622 GWh, down 1.5% on 2021 (90,962 GWh).

The table shows the values of the TIEPI (interruption time in minutes), and NIEPI (number of interruptions) in relation to the previous year (exact details are not published as this is commercially sensitive information):

Thanks to the investments made by the Networks business in Spain in new electricity infrastructure, the maintenance and renewal of existing infrastructure, as well as the plan to digitise electricity grids, the level of quality continues to improve in 2022.

In 2022, i-DE launched the European BeFlexible project, with the aim of addressing the challenge of accelerating the Energy Transition and achieving the goals of the European Green Deal. The project has received funding of EUR 10 million from the European Commission through the Horizon Europe programme. Over its four-year term, BeFlexible will seek to increase the flexibility of the energy system, enhance cooperation between Distribution System Operators (DSOs) and Transmission System Operators (TSOs) and facilitate the engagement of all energy-related stakeholders. To address these challenges, the project consortium brings together 21 partners and three affiliates from seven different European countries (Spain, Italy, Portugal, Belgium, Germany, Sweden and Denmark), including DSOs, TSOs, aggregators, R&D centres and universities with expertise in the technology behind the solutions, industrial suppliers of smart grid technology and ICT developers.
With a view to moving forward in the energy transition towards a more sustainable model based on clean sources, during 2022 i-DE redesigned the grid access and connection process, incorporating more than 2,000 new generation plants into the grid, with a combined installed capacity equivalent to the energy consumed by two million homes. These facilities will avoid emissions of 3.6 million tonnes of CO₂ per year. By streamlining the connection of new renewable plants to the grid, i-DE is also helping to achieve energy independence. The new standard also adds transparency and creates sufficient confidence to attract the necessary investments to develop the infrastructures that will make the decarbonisation process a reality.

In October, the European Investment Bank (EIB) and IBERDROLA agreed to extend the green loan signed in 2021 to fund the development, modernisation and digitisation of the company’s electricity distribution networks, a project with an impact spanning 12 regions of Spain. The EUR 220 million increase brings the total EIB financing to around EUR 820 million, which will be used to drive smart grids in Spain and further contribute to the electrification of the economy. The project tied to the loan will allow for an improvement in the efficiency of the distribution network through automation. With this loan, IBERDROLA will boost economic recovery and employment in Spain, supporting an estimated 10,000 jobs a year in Spain during the implementation period, according to EIB estimates.

Global Smart Grids Innovation Hub

In its commitment to smart grids, in 2022 IBERDROLA announced the winners of five new editions of its international challenge programme for start-ups, known as the Global Start-up Challenge. The programme aims to identify innovative solutions to improve operations and minimise environmental impact within the IBERDROLA Group. The winning companies (Drone by Drone, Highline Division, Automa, Minsait and Woza Labs) submitted innovative solutions to improve line maintenance, ensure continuity of supply, identify non-technical losses and predict, plan and quantify weather risks likely to cause damage to network assets.

All these start-ups have signed up for the Global Smart Grids Innovation Hub (GSGIH), the company’s pioneering grid innovation centre, which aims to become a benchmark in innovation applied to grids and acts as a driving platform for R&D&I and local and international talent. In this space, promoted by IBERDROLA and the Provincial Council of Bizkaia, and located at the Larraskitu head offices in Bilbao, more than 80 companies, technology centres and universities are already working on 120 projects worth EUR 130 million.

In November, the GSGIH held its first Innovation Week, designed to share the most advanced innovation projects in the realm of smart grids. Topics addressed during the event included the future of the grid in the energy transition, the importance of data and attracting new talent. Innovation Week also included an exhibition of cutting-edge grid management technology, ranging from the use of drones to the use of virtual reality in monitoring electricity infrastructures.
2.2.1.2 United Kingdom

The IBERDROLA Group has more than 3.55 million supply points in the United Kingdom. Total energy distributed in 2022 came to 31,020 GWh (32,221 GWh in 2021), which represents a decrease of 3.7% on 2021.

Energy distributed by licence is as follows:

<table>
<thead>
<tr>
<th>Licence</th>
<th>2022</th>
<th>2021</th>
<th>% chg</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scottish Power Distribution (SPD)</td>
<td>16,895</td>
<td>17,462</td>
<td>-3.25</td>
</tr>
<tr>
<td>Scottish Power Manweb (SPM)</td>

<td>28.91</td>
</tr>
<tr>
<td>Scottish Power Manweb (SPM)</td>
<td>28.41</td>
<td>40.77</td>
</tr>
</tbody>
</table>

The number of consumers affected by interruptions for every 100 customers (Customer Interruptions, or CI) was as follows:

<table>
<thead>
<tr>
<th>Number of interruptions (No)</th>
<th>2022</th>
<th>2021</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scottish Power Distribution (SPD)</td>
<td>35.68</td>
<td>39.79</td>
</tr>
<tr>
<td>Scottish Power Manweb (SPM)</td>
<td>28.16</td>
<td>34.32</td>
</tr>
</tbody>
</table>

In February, the United Kingdom experienced the worst spate of heavy rainfall in decades with the passage of storms Dudley, Eunice and Franklin. During the last two storms, winds of more than 135 kilometres per hour were recorded. Despite the extreme conditions, the company responded rapidly by mobilising all the necessary personnel to restore power to 100% of the 42,000 affected customers within 24 hours.

SP Energy Networks was recently commended by the UK regulator, Ofgem, for its speed and proactivity in its supply recovery work during Storm Arwen, which affected more than 200,000 customers in late 2021.

2.2.1.3 United States

– Distribution

In the United States IBERDROLA has 2.31 million electricity supply points. Total energy distributed in the year came to 38,757 GWh, unchanged with respect to 2021 (38,756 GWh).

</table>

Throughout 2022 numerous storms affected AVANGRID’s distribution areas. Specifically in the last quarter, a state of emergency was declared in New York and Connecticut (among other states) due to Storm Elliott in late December. This unprecedented storm affected many utilities in the US, and was classified as a Major Storm in all the impacted districts. Over 600,000 AVANGRID customers were affected. Full service was restored in Connecticut in less than 24 hours and within 72 hours in New York. The work carried out was highly commended by the media and local representatives.

AVANGRID’s emergency response was also acknowledged by the Edison Electric Institute (EEI) in the wake of the devastation caused by Hurricane Ida in the state of Louisiana in 2021. The distributors CMP, NYSEG, RG&E and UI each won the prestigious Emergency Response Award, presented each year to utilities for outstanding efforts to quickly restore service following a storm or natural disaster. On this occasion, more than 60 employees from the four distributors travelled to Louisiana to assist in restoring service to the 895,000 hurricane-struck customers, repairing posts and lines downed by the storm. The EEI also recognised RG&E’s efforts to restore service to more than 50,000 customers following the December 2021 windstorm, along with the previously noted award for NYSEG’s response to the April 2022 snowstorms.

Thermal generation facilities are also managed. Power and production details are as follows. There is no change compared to 2021.
### Power (MW)

### Gas

AVANGRID supplies gas to more than 1 million supply points. By the end of 2022, it had distributed a total of 64,890 GWh of gas, up 5.7% on the previous year due mainly to the lower temperatures of the first quarter of the year.

<td>5.71</td>
<td>7.05</td>
</tr>
</tbody>
</table>

Efforts to improve the quality of supply have led to an increase compared to 2021 in Elektro and Brasilia, while all distributors comply with regulatory requirements in this respect.

Throughout 2022, work on transmission projects awarded in the auctions of the Brazilian regulator (ANEEL) continued to progress as scheduled. Once completed, they will extend the transmission grid by more than 8,300 km. In this respect, at year-end the project corresponding to Lot 9 of the December 2019 auction (Rio Formoso) was powered up. After commercial commissioning, this will bring the number of Neoenergia projects in operation to a total of 10.

In addition, in late June, Neoenergia participated in the auction held by ANEEL, winning Lot 2 (the largest lot in the auction) and Lot 11, for a total of close to 2,000 km. Lot 2 includes the construction and commissioning of the 500 kV Nova Ponte 3 substation and 1,707 km of transmission lines in the states of Minas Gerais and São Paulo. With an estimated 10,000 direct jobs created, these facilities will contribute to the expansion of transmission capacity in the northern region of Minas Gerais. Lot 11 corresponds to the construction and operation of 291 km of transmission lines and 300 MVA of transformation capacity. This lot is intended to integrate small hydropower plants and connect distribution in the Paraíso region of the state of Mato Grosso do Sul. These two projects are in addition to the 4,000 km of lines NEOENERGIA already has under construction and a further 2,300 km in operation.

### 2.2.2 Electricity production and retail

At year-end 2022, IBERDROLA’s consolidated installed capacity was up 2,436 MW (net of derecognitions) on 2021 at 57,987 MW consolidated in terms of EBITDA, with 69.9% the total (40,518 MW of renewable and nuclear power) coming from emission-free sources, compared to 69.5% in 2021.

<td>19,529</td>
<td>18,949</td>
<td>580</td>
</tr>
</tbody>
</table>

(*) Including the 998 MW of Gouvaes and Daivoes in Portugal.
(**) Solar capacity measured in MWdc

Hydroelectric capacity includes the Tâmega project in Portugal, which will total 998 MW after commissioning of the Gouvães facility (880 MW) and two generators at Daivões (118 MW).

The increase in capacity during the year came from the following facilities:

- Installed capacity in onshore wind power increased by 86 MW, corresponding to: the commissioning of 50 MW at the Valdemoro wind farm and 36 MW at the Martín de la Jara wind farm.
- In addition, following its sale, 23 MW of ordinary regime mini-hydro have been removed along with 6 MW under the special regime.
- In photovoltaic solar capacity: Module installation work has been completed at the facilities of Francisco Pizarro (37 MW), Almaraz I (50 MW), Almaraz II (30 MW); Puertollano (0.2 MW), Los Manantiales I (27 MW), Valbuena (46 MW), Cornicabra (20 MW), Espliego (8.8 MW), Poleo (8 MW), Revilla-Vallejera (47.5 MW), Villarino (50 MW), Virgen de Arefios III (34 MW), Llanos Pelaos III (0.5 MW), Tagus I (50 MW), Tagus II (50 MW), Tagus III (9 MW) and Tagus IV (50 MW).
- In battery storage projects, 5 MW have been installed in Urkilla.

In relation to ongoing projects:

- In the last quarter of the year, construction started on the El Escudo wind farm (105 MW) in Cantabria and the Iglesias wind farm (94 MW) in Burgos.
- Work also began at the Ciudad Rodrigo photovoltaic plant (318 MW) in Salamanca, the Fuentes photovoltaic plant (50 MW) in Guadalajara and the Salinas I to III photovoltaic plants (149 MW) in Cuenca.
- In Portugal, work continued at the Alto Tâmega plant (160 MW), where the construction of the main body of the dam has been completed and the assembly of the two power units has begun.

www.iberdrola.com
The trend in consolidated production by technology is as follows:

<table>
<thead>
<tr>
<th>Technology</th>
<th>2022</th>
<th>2021</th>
<th>% chg.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Onshore wind</td>
<td>11,254</td>
<td>11,501</td>
<td>(2.1)</td>
</tr>
<tr>
<td>Hydroelectric</td>
<td>9,511</td>
<td>14,620</td>
<td>(34.9)</td>
</tr>
<tr>
<td>Mini hydroelectric under the Ordinary Regime and Special Regime</td>
<td>415</td>
<td>624</td>
<td>(33.5)</td>
</tr>
<tr>
<td>Solar and other</td>
<td>2,150</td>
<td>1,233</td>
<td>74.4</td>
</tr>
<tr>
<td>Total production (GWh)</td>
<td>23,330</td>
<td>27,978</td>
<td>(16.6)</td>
</tr>
</tbody>
</table>

- Onshore wind power production reached 11,254 GWh during the period, down by 2.1% compared to 2021, as a result of lower wind resources.
- Hydroelectric production reached 9,511 GWh, down 34.9% compared to the previous year due to the low rainfall recorded during the period. Production at mini-hydro plants was also down for the same reason, with total power generation of 415 GWh, 33.5% less than in the same period of the previous year.
- Solar energy production will reach 2,150 GWh in the period, following the entry into operation of new facilities.

**Thermal capacity and production**

Installed capacity in Spain, unchanged with respect to financial year 2021, came to 9,168 MW. The breakdown by technology is as follows:

<table>
<thead>
<tr>
<th>Technology</th>
<th>2022</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nuclear</td>
<td>3,177</td>
</tr>
<tr>
<td>Gas combined cycles</td>
<td>5,695</td>
</tr>
<tr>
<td>Cogeneration</td>
<td>296</td>
</tr>
<tr>
<td>Total power (MW)</td>
<td>9,168</td>
</tr>
</tbody>
</table>

In 2022, production amounted to 32,682 GWh. The breakdown by technology is as follows:

<table>
<thead>
<tr>
<th>Technology</th>
<th>2022</th>
<th>2021</th>
<th>% chg.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nuclear</td>
<td>23,886</td>
<td>23,193</td>
<td>3.0</td>
</tr>
<tr>
<td>Gas combined cycles</td>
<td>7,082</td>
<td>7,023</td>
<td>0.8</td>
</tr>
<tr>
<td>Cogeneration</td>
<td>1,714</td>
<td>1,992</td>
<td>(14.0)</td>
</tr>
<tr>
<td>Total production (GWh)</td>
<td>32,682</td>
<td>32,208</td>
<td>1.5</td>
</tr>
</tbody>
</table>

IBERDROLA's thermal production in 2022 was up by 1.5% compared to the same period of the previous year. Higher production was recorded at nuclear power plants (+3%), combined cycle (+0.8%) while cogeneration production decreased (-14%).

**Supply**

The portfolio under management in Spain represented 22 million contracts at the end of 2022. The breakdown is as follows:
Thousands No. of contracts
---
Electricity contracts 10,884
National gas contracts 1,351
Contracts for products and services 9,919
Total 22,154

By market type, the categories are:

Thousands No. of contracts
---
Free market 19,374
Last resort 2,780
Total 22,154

IBERDROLA’s electricity revenue (in power plant busbars) in 2022 was up 6.4% and was distributed as follows:

<table>
<thead>
<tr>
<th>GWh</th>
<th>2022</th>
<th>2021</th>
<th>% chg</th>
</tr>
</thead>
<tbody>
<tr>
<td>Free market</td>
<td>66,653</td>
<td>50,594</td>
<td>31.7</td>
</tr>
<tr>
<td>PVPC</td>
<td>6,866</td>
<td>8,537</td>
<td>(19.6)</td>
</tr>
<tr>
<td>Other markets</td>
<td>19,582</td>
<td>28,350</td>
<td>(30.9)</td>
</tr>
<tr>
<td>Electricity sales (GWh)</td>
<td>93,101</td>
<td>87,481</td>
<td>6.4</td>
</tr>
</tbody>
</table>

IBERDROLA managed a gas balance in 2022 of 2.67 bcm, of which 0.04 bcm was sold in wholesale operations, 1.28 bcm was sold to end customers and 1.35 bcm was used for electricity production.

### 2.2.2.2 United Kingdom

**Renewable capacity and production**

Consolidated installed capacity in the United Kingdom came to 2,993 MW, unchanged on 2021. The breakdown by technology is as follows:

<table>
<thead>
<tr>
<th></th>
<th>2022</th>
</tr>
</thead>
<tbody>
<tr>
<td>Onshore wind</td>
<td>1,971</td>
</tr>
<tr>
<td>Offshore wind</td>
<td>908</td>
</tr>
<tr>
<td>Solar (*)</td>
<td>10</td>
</tr>
<tr>
<td>Batteries</td>
<td>104</td>
</tr>
<tr>
<td><strong>Total power (MW)</strong></td>
<td><strong>2,993</strong></td>
</tr>
</tbody>
</table>

(*) Solar capacity measured in MWdc.

Meanwhile, several projects continue to be developed:

- In offshore wind, the East Anglia group of projects in the North Sea is currently under development. The East Anglia 1 offshore wind farm continues to supply the national grid through the transmission assets, whose divestment process, led by Ofgem, was completed in December 2022, with the assets being acquired by Transmission Capital Partners.
East Anglia 3, the second of IBERDROLA's projects in the area, with an installed capacity of 1,400 MW, after being awarded a contract in the United Kingdom's fourth round of auctions, has continued to secure key contracts for the project. In addition, good progress has been made on the engineering and design work of the HDVC submarine transmission lines. Likewise, ground survey work for mine detection has been launched and is expected to be completed in early February 2023. The project is now progressing towards final investment decision (FID), and once such a decision is taken, the contracts will be executed. Permits for East Anglia 1 North and East Anglia 2 were secured on 31 March 2022, with key engineering design work progressing for the remainder of the year.

Following the successful award of the ScotWind offshore area auction, option contracts were signed in 2022 with Crown Estate Scotland for the development of three offshore wind projects with a total capacity of 7 GW; two large-scale floating projects in partnership with Shell (3 GW MarramWind and 2 GW CampionWind) and one fixed foundation project (2 GW, MachairWind). Activities to obtain the necessary permits are currently under way.

In solar photovoltaic, work continues on the Coldham hybrid project (9 MW) in England.

The trend in consolidated production, terms of EBITDA, was as follows:

<table>
<thead>
<tr>
<th></th>
<th>2022</th>
<th>2021</th>
<th>% chg. Consolidated</th>
</tr>
</thead>
<tbody>
<tr>
<td>Onshore wind</td>
<td>4,415</td>
<td>3,275</td>
<td>34.8</td>
</tr>
<tr>
<td>Offshore wind</td>
<td>3,392</td>
<td>3,433</td>
<td>(1.2)</td>
</tr>
<tr>
<td>Solar and other</td>
<td>7</td>
<td>—</td>
<td>—</td>
</tr>
<tr>
<td>Total production (GWh)</td>
<td>7,814</td>
<td>6,708</td>
<td>16.5</td>
</tr>
</tbody>
</table>

Onshore wind power production totalled 4,415 GWh, up 34.8% on the same period of the previous year, following normalisation of the wind resource.

Offshore wind production at the East Anglia 1 wind farm was down 1.2% to 3,392 GWh.

Supply

The portfolio under management in the United Kingdom totalled 7 million contracts at the end of 2022, broken down as follows:

<table>
<thead>
<tr>
<th>Thousands</th>
<th>No. of contracts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electricity contracts</td>
<td>2,831</td>
</tr>
<tr>
<td>National gas contracts</td>
<td>1,915</td>
</tr>
<tr>
<td>Contracts for products and services</td>
<td>316</td>
</tr>
<tr>
<td>Smart meters</td>
<td>2,194</td>
</tr>
<tr>
<td>Total</td>
<td>7,256</td>
</tr>
</tbody>
</table>

In 2022, 18,484 GWh of electricity and 22,919 GWh of gas was supplied to customers, 4.8%* and 11.6%** less than in 2021, respectively.

---

* Sales measured in power plant busbars.
** Without deducting shrinkage.
2.2.2.3 United States

Renewable capacity and production

Consolidated installed capacity in the United States comes to 8,453 MW. The breakdown by technology is as follows:

<table>
<thead>
<tr>
<th>Technology</th>
<th>2022 (MW)</th>
<th>2021 (MW)</th>
<th>Change (MW)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Onshore wind</td>
<td>7,825</td>
<td>7,708</td>
<td>117</td>
</tr>
<tr>
<td>Hydroelectric</td>
<td>118</td>

<td>—</td>
</tr>
<tr>
<td><strong>Total power (MW)</strong></td>
<td><strong>8,453</strong></td>
<td><strong>8,059</strong></td>
<td><strong>394</strong></td>
</tr>
</tbody>
</table>

(*) Solar capacity measured in MWdc.

The following capacity was incorporated during the period:

- Onshore wind power of 117 MW: Golden Hills wind farm (11 MW) and Midland wind farm (106 MW), where assembly of the 25 wind turbines has finalised.

- In solar photovoltaic, the modules for the Lund Hill plant (92 MW) and Montague Solar plant (185 MW of the total 211 MW the plant will ultimately have) have been installed.

In relation to ongoing projects:

- Construction continues at the Bakeoven (80 MW) and Daybreak (189 MW) photovoltaic plants.

- Offshore wind:
  - Construction at Vineyard Wind 1 is progressing on schedule, with the drilling of the connection site for the export cable completed and construction of the onshore substation now ongoing.
  
  - Elsewhere, Park City Wind, Commonwealth Wind and Kitty Hawk Wind are currently in the process of obtaining their federal government permits.

  - In the case of Commonwealth Wind, on account of the major challenges facing the offshore wind industry in terms of the supply chain, rising inflation and rising interest rates, AVANGRID filed a motion with the Massachusetts Department of Public Utilities (DPU) on 12 December 2022 requesting the dismissal of the review of the Power Purchase Agreements signed with state distributors and electricity distribution companies. AVANGRID remains committed to submitting the Commonwealth Wind project to the next Massachusetts auction, scheduled for 2023, and is highly confident, given the advanced status of the projects and their inherent benefits, that it can meet the existing economic challenges facing the project by offering the most competitive price, an appropriate timeline to help Massachusetts meet its ambitious 2030 climate goals, and the creation of thousands of jobs and opportunities for development.
Consolidated production by technology and its trend during the year was as follows:

<table>
<thead>
<tr>
<th>Technology</th>
<th>2022</th>
<th>2021</th>
<th>% chg. Consolidated</th>
</tr>
</thead>
<tbody>
<tr>
<td>Onshore wind</td>

<tr>
<td><strong>Total power (MW)</strong></td>
<td>2,373</td>
<td>1,820</td>
<td>553</td>
</tr>
</tbody>
</table>

In onshore wind, 407 MW of the 12 wind farms comprising the Oitis wind farm complex, which will have a total of 566 MW, in the state of Piauí, entered commercial operation. In the state of Paraíba, at the Chafariz complex (472 MW), installation of the last 3 MW was completed.
In solar photovoltaic technology, also in the state of Paraiba, the construction and commissioning continues at Luzia II and III (149 MW), of which 143 MW had been installed at year-end. The facilities have already begun to produce electricity and are the first photovoltaic plants to be built in the country.

In hydroelectric power, an asset swap agreement was signed in 2023, whereby NEOENERGIA will increase its stake in the Dardanelos plant to 100% but will no longer have a stake in the Baguari and Telespires plants, thus optimising its generation portfolio with this technology.

Consolidated production by technology and its trend during the year was as follows:

<table>
<thead>
<tr>
<th></th>
<th>2022</th>
<th>2021</th>
<th>%chg. Consolidated</th>
</tr>
</thead>
<tbody>
<tr>
<td>Onshore wind</td>
<td>3,843</td>

<td>—</td>
</tr>
<tr>
<td>Total production (GWh)</td>
<td>6,566</td>
<td>4,180</td>
<td>57.1</td>
</tr>
</tbody>
</table>

- With the introduction of the new wind farms, onshore wind production totalled 3,843 GWh, up 66.1% compared to 2021.
- Meanwhile, hydroelectric production came to 2,632 GWh 41.0% higher than in 2021.
- Solar photovoltaic production came to 91 GWh with the entry into operation of the new Luzia II and III plants.

**Thermal capacity and production**

Generation power in Brazil, which comes from the Termopernambuco gas combined cycle facility, is 533 MW. Production in 2022 totalled 14 GWh.

**2.2.2.6 Iberdrola Energía Internacional (IEI)**

**Renewable capacity and production**

Iberdrola Energía Internacional’s installed renewable capacity came to 2,658 MW, 395 MW more than in 2021.

By technology, installed capacity is as follows:

<table>
<thead>
<tr>
<th></th>
<th>2022</th>
<th>2021</th>
<th>Change MW</th>
</tr>
</thead>
<tbody>
<tr>
<td>Onshore wind</td>
<td>1,885</td>

</tr>
<tr>
<td>Total power (MW)</td>
<td>2,658</td>
<td>2,263</td>
<td>395</td>
</tr>
</tbody>
</table>

(*) Solar capacity measured in MWdc.
The increase in capacity corresponds to the following facilities:

- In wind power capacity, 136 MW of onshore wind power was added. Commercial operation of 21 MW at the Mikronoros wind farm and 18 MW at Rokani began, and the assembly of 76 MW at the Askio II and Askio III wind farms in Greece and 21 MW at the Korytnica II wind farm in Poland was completed.

- In photovoltaic solar technology, Portugal’s first photovoltaic plant, Algeruz 2, was commissioned with the installation of 18 MW. Also in Portugal, work continued on the Alcochete I and II photovoltaic plants, with the installation of 46 MW of modules during the year, and 14 MW at the Conde plant. In Australia, further progress was made towards the Avonlie project, where 125 MW was installed, and at the Port Augusta wind-solar hybrid project, where 53 MW of photovoltaic power has already been installed. In Italy, 3 MW were installed at the Montalto di Castro wind farm.

As for ongoing projects, development continues on offshore wind projects:

- In France, the Saint Brieuc project (496 MW) began in 2023 by installing the subsurface cable and is continuing with the installation of the foundations, which will allow the wind turbines to be deployed progressively, leading to the commissioning of the offshore wind farm before the end of 2023.

IBERDROLA continues to work on the three offshore wind auctions in France it has been prequalified for: the 1 GW auction off the coast of Normandy, submitted last November and expected to be awarded during February; the 250 MW floating offshore wind auction in Brittany, France, whose bid submission date has been delayed to June; and the auction of two 250 MW areas of floating technology in the Mediterranean, with a submission date pending definition for the second half of 2023.

Lastly, in France, the company was awarded its first floating solar power project with a total capacity of 25 MW.
– At the Baltic Eagle project (476 MW) in Germany, the deep foundations and jacket of the substation are already installed and the substation installation is expected to be completed during the first quarter of 2023. Fabrication work on the foundations is in its final phase, with the monopiles completed, while the transition pieces will be completed during the first quarter of 2023, with installation beginning around mid-2023. Cable manufacturing has begun and will be completed during the first quarter of the year while, in the case of the turbines, many of the subcomponents are already in production. Nacelle manufacturing will also begin in early 2023, followed by blades and towers during the first half of the year.

– To further its commitment to Sweden and strengthen its presence there, IBERDROLA has established a subsidiary (Iberdrola Førnybar Sverige) and is continuing to develop the Utposten 2 project alongside Svea Vind Offshore. The project was filed with the administrative court in late 2022, and the court has requested additional clarifications in the process before issuing the environmental permit, delaying the granting of the permit by a few months. Likewise, efforts continue to obtain the environmental permit for Gretas Klackar 1 (1,632 MW) and Gretas Klackar 2 (795 MW).

– In Ireland, IBERDROLA is working with DP Energy to draw up and submit the applications for MAC (Maritime Area Consent) for the three selected projects: Clarus, Shelmalere and Inis, with a total maximum capacity of 2,600 MW. From a regulatory standpoint, MAC for Phase 1 has already been awarded to seven fixed foundation projects with a maximum capacity of 4.5 GW and the conditions for the rate auction involving these projects have been published (ORESS1). For Phase 2 projects, where IBERDROLA has its portfolio, the publication of the procedure to apply for MAC is currently pending.

– In Poland, where different areas are expected to be awarded during 2023, IBERDROLA is taking part in one of them, alongside its partner Sea Wind. The award of seabed permits for the projects will allow them to take part in the auctions to be held in the country from 2025 onwards.

– In Norway, IBERDROLA and its partners TotalEnergies and Norsk Havvind continue to work to bid in the auctions held by the Norwegian authorities for the development of floating and fixed foundation wind projects, with a cumulative capacity of 4,500 MW at two sites announced by the government (Utsira Nord-floating and Soerlige Nordsjoe-fixed). The auction dates are still to be defined, although it is initially estimated that the bidding process will take place throughout the year.

– In Japan, the auction for Round 2, which envisages a total of four different sites with an expected total capacity of 1.8 GW, has resumed; proposals are due by 30 June 2023 and successful bidders will be announced by year-end. Changes have been incorporated in this new auction with respect to Round 1, such as the type of remuneration scheme, favouring proposals with an earlier start-up and restricting the award to 1 GW per round for the same consortium, to avoid a reoccurrence of what happened during Round 1. IBERDROLA remains focused on developing the projects in its portfolio for Round 3 with its Japanese partners (auction for 2024), and is analysing different opportunities to increase its presence in the country, both for Round 2 and other successive rounds.
In Taiwan, environmental impact studies have been delivered for projects under development to participate in the 2023 auction. Similarly, the geophysical and geotechnical studies phase has concluded, thus completing all the work planned to date. The presence of the local team has improved relations with local players, both government bodies and suppliers, and the possibility of incorporating a partner in the country remains an option under consideration.

In Australia, the Federal Government has launched the first phase for awarding feasibility licences in Gipsland (Victoria state), with a deadline for applications set for 27 April 2023. IBERDROLA is making headway in drawing up the documentation required for a number of projects.

Renewable energy production totalled 5,053 GWh at year-end, up 11.5% on 2021, mainly in onshore wind (up 17.1%), due to the additional power gained from acquisitions in Greece and Poland and solar photovoltaic also due to the incorporation of new capacity, while offshore wind was down 6.7% due to the lower wind resource in the year.

2.3 Business performance

2.3.1 Analysis of the Income statement

Key figures for 2022 are as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>2022</th>
<th>2021</th>
<th>Change (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Revenue</td>
<td>53,949</td>
<td>39,114</td>
<td>37.9</td>
</tr>
<tr>
<td>Gross income (1)</td>
<td>20,199</td>
<td>17,062</td>
<td>18.4</td>
</tr>
<tr>
<td>EBITDA (2)</td>
<td>13,228</td>
<td>12,006</td>
<td>10.2</td>
</tr>
<tr>
<td>EBIT (3)</td>
<td>7,984</td>
<td>7,343</td>
<td>8.7</td>
</tr>
<tr>
<td>Net profit for the period attributable to the parent</td>
<td>4,339</td>
<td>3,885</td>
<td>11.7</td>
</tr>
</tbody>
</table>

(1) Gross Income: Revenue - Supplies
(2) EBITDA: Operating profit + Depreciation, amortisation and provisions + Valuation adjustments on trade receivables and contract assets
(3) EBIT: Operating profit

In 2022, the IBERDROLA Group reported EBITDA of EUR 13,228 million, up 10.2%. Without considering the positive exchange rate effect of EUR 736 million, it would have risen by 4.0%.
This positive performance was achieved in an environment of historically high energy prices in Europe and strong inflationary pressures worldwide.

- In Spain, the commercial policy partially offset the negative impacts of the low renewable production and the outage at the Cofrentes nuclear power plant, without the effects of the lower positive impact of court rulings and asset rotation in 2021.

- In the United Kingdom, the improvement in renewable production offset the negative effect caused by the energy price cap calculation method. The negative impact of the tax rate change in 2021 improved the year-on-year trend in net profit.

- The United States performed very positively, spurred by non-recurring results, mainly from the recognition of regulatory assets in New York, as well as the agreement with CIP and pension-related adjustments following the freezing of certain benefit schemes.

- In Mexico, regulatory actions are penalising growth, mainly permits being denied and the shortfall in the CFE tariff.

- Brazil posted solid growth in an environment of persistent double-digit inflation in the country thanks to tariff hikes, offsetting the rising cost of debt.

- At IEI, the higher prices were offset by tax measures imposed in certain countries, including Greece and Romania.

Profit for the year exceeded the guidance initially set. All countries turned in a positive performance thanks to the growth in all businesses, which resulted in the parent company’s profit for the year gaining EUR 454 million, up 11.7% on 2021; 9.4% not considering the positive effect of the exchange rate of EUR 87 million, to reach EUR 4,339 million.

### 2.3.1.1 Gross Income

Gross income came to EUR 20,199 million, up EUR 3,137 million, or 18.4%, compared to the figure reported in 2021. Stripping out the exchange rate effect of EUR 1.173 million, it would be EUR 1,964 million (11.5%) up on the figure reported in 2021.

Gross income by country subholding is as follows:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
In Spain, gross income increased by EUR 350 million, 5.5% higher than in 2021. Market volatility experienced throughout the year meant that the increase in sales of EUR 6,898 million was largely offset by an increase in procurement costs of EUR 6,548 million. The contribution of the Networks business decreased by approximately EUR 74 million due to the one-off effect of an adjustment of incentives from previous years. Meanwhile, the combined contribution of the Renewables and Sustainable Generation and Customers businesses increased due to the aforementioned volatility.

In the United Kingdom, gross income increased its contribution by 5.5% to EUR 159 million, driven by the Networks business, as a result of a larger asset base in the business stemming from investments and the Renewables and Sustainable Generation business, which in the country is solely renewable, with increased contributions from wind power assets. These improvements offset the negative effects of the Customers business, which continues to bear higher provisioning costs, not yet recognised in the standard variable tariffs (SVTs), and the higher number of customers who have switched from fixed tariffs to SVTs.

In the United States, gross income was up EUR 1,145 million on financial year 2021. The increase is primarily due to the contribution from the Networks business due to the exceptional positive effect of the new wording on the recognition of regulatory assets in the state of New York. Other factors include the higher average operating capacity during the year and the improvement in the wind power load factor, with a 3.5% increase in production.

In Brazil, gross income improved by 34.4% year-on-year compared to 2021, up by EUR 796 million. There is improvement in all businesses. In the Networks business, due to the positive effects of tariff adjustments and inflation and the fact that Neoenergia Brasilia contributed an additional quarter. In the Renewables and Sustainable Generation business, due to the entry into operation of the Chafariz and Oitis wind farms and part of the Luzia solar plants, which increased the level of renewable production, and due to the contribution of the Termopernambuco combined cycle plant, which was shut down owing to gas supply restrictions during the year, and which buys energy at lower market prices to honour its contractual commitments with the distributors.

Gross income in Mexico grew by 12.4%, EUR 128 million higher than in 2021, thanks to the positive comparative effect of the cold snap at the beginning of 2021 in Texas and the higher wind power production driven by a higher wind power load factor, offsetting lower thermal output.

The other IEI countries increased their contribution by 17.8%, up by EUR 91 million on the previous year, as a result of the increase in production due to the entry of new facilities.
2.3.1.2 Gross operating profit - EBITDA

Consolidated EBITDA was up EUR 1,222 million (+10.2%) to EUR 13,228 million, compared to EUR 12,006 million in 2021. The net effect of exchange rates fluctuations had a positive impact EUR 736 million. Without this effect, it would have grown by 4.0%.

Contributions by country subholding were as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>2022</th>
<th>2021</th>
<th>Change (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spain</td>
<td>4,612</td>

<tr>
<td><strong>GROSS OPERATING PROFIT (EBITDA)</strong></td>
<td><strong>13,228</strong></td>
<td><strong>12,006</strong></td>
<td><strong>10.2</strong></td>
</tr>
</tbody>
</table>

EBITDA in 2022 grew in all regions except Spain, which, due to an adverse environment, fell by 12.1%.

In addition to the gross income performance, the variables behind the EBITDA performance are as follows:

– **Net operating expenses**

Net operating expenses by country subholding are as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>2022</th>
<th>2021</th>
<th>Change (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spain</td>
<td>1,296</td>
<td>1,126</td>
<td>15.1</td>
</tr>
<tr>
<td>United Kingdom</td>
<td>803</td>
<td>748</td>
<td>7.4</td>
</tr>
<tr>
<td>United States</td>
<td>1,859</td>
<td>1,426</td>
<td>30.4</td>
</tr>
<tr>
<td>Mexico</td>
<td>288</td>

</tr>
<tr>
<td><strong>Net operating expenses</strong></td>
<td><strong>5,209</strong></td>
<td><strong>4,227</strong></td>
<td><strong>23.2</strong></td>
</tr>
</tbody>
</table>

The heading Net operating expenses increased by EUR 982 million to EUR 5,209 million (EUR 4,227 million in 2021). The exchange rate effect had a negative impact of EUR 367 million in the comparison. The change, without the exchange rate effect, EUR 615 million, would be 14.5%.

The main impacts are the result of the Group’s growth, with the consequent increase in outsourced services affected by inflation and the 3.9% growth in the workforce mainly due to the acquisition of Neoenergia Distribuição Brasília in March 2021. In addition, storm-related costs in the United States increased this heading by EUR 192 million, although they will be recoverable in the future via tariffs. Lastly, the comparison is affected by the positive impact of the asset rotation plan in 2021.
These effects are partially offset by the reversal of a provision for pensions in the United States Networks business, leading to a positive impact on net operating expense of EUR 74 million.

– **Taxes other than income tax**

Taxes other than income tax by country subholding are as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>2022</th>
<th>2021</th>
<th>Change (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spain</td>
<td>855</td>

</tr>
<tr>
<td><strong>Taxes other than income tax</strong></td>
<td><strong>1,762</strong></td>
<td><strong>829</strong></td>
<td><strong>112.5</strong></td>
</tr>
</tbody>
</table>

Taxes other than income tax increased by EUR 933 million, to EUR 1,762 million (EUR 829 million in 2021). The exchange rate effect has a negative impact of EUR 70 million in the comparison. The change, excluding the exchange rate effect, was EUR 863 million, mainly due to the extraordinary positive effect in 2021 of the hydroelectric tax ruling, which brought in EUR 951 million in revenue in Spain.

2.3.1.3 **Net operating profit – EBIT**

EBIT totalled EUR 7,984 million, 8.7% up on 2021 (EUR 7,343 million). Without considering the positive exchange rate effect of EUR 451 million, the increase would have been 2.6%.

Breakdown by country subholding:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>2022</th>

<td><strong>7,984</strong></td>
<td><strong>7,343</strong></td>
<td><strong>8.7</strong></td>
</tr>
</tbody>
</table>

– **Valuation adjustments, trade receivables and contract assets**

Trade receivable and contract asset provisions totalled EUR 470 million, up EUR 101 million on 2021 (EUR 369 million).
– **Amortisation, depreciation and provisions**

Amortisation and depreciation was up EUR 485 million (11.6%) to reach EUR 4,682 million, due to a wider asset base and business growth within the Group.

Provisions for impairment and write-downs of non-financial assets decreased by EUR 25 million and the change in Provisions increased by EUR 20 million compared to 2021.

**2.3.1.4 Finance income**

Financial losses were up by EUR 835 million to EUR 1,838 million (EUR 1,003 million in 2021). The breakdown of this change by item is as follows:

<table>
<thead>
<tr>
<th>Millions of euros</th>
<th>2022</th>
<th>2021</th>
<th>Change</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gains/(losses) on debt</td>
<td>(1,822)</td>
<td>(1,312)</td>
<td>(510)</td>
</tr>
<tr>
<td>Other non-debt finance income</td>
<td>(16)</td>
<td>309</td>
<td>(325)</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td>(1,838)</td>
<td>(1,003)</td>
<td>(835)</td>
</tr>
</tbody>
</table>

The change can be largely explained by:

– Gains/(losses) on debt were up EUR 510 million; EUR 163 million due to the appreciation of currencies against the euro, EUR 145 million due to the increase in the average balance and EUR 202 million due to the higher cost, mainly in Brazil.

– Other items represented a deterioration of EUR 325 million due to worse results from exchange rate hedges and the inclusion in 2021 of extraordinary income related to the collection of past-due interest and the marking to market of equity investments.

At 31 December 2022, the Group’s average borrowing costs stood at 4.14%, compared to 3.24% in the same period of the previous year (Note 28).

In turn, the average cost of adjusted net financial debt rose 67 basis points to 4.27%, compared to 3.60% in the same period of the previous year, due to higher interest rates, mainly the CDI in Brazil. Without considering Brazil, the cost of adjusted net financial debt increased by 10 basis points from 2.89% in 2021 to 2.99% in 2022. The exchange rate impact on gains/(losses) on debt is managed at net profit level through derivatives, while the inflation impact is offset by the operating profit of the distributors.

The average cost of adjusted net financial debt is calculated as the quotient of gains/(losses) on debt and the average balance of adjusted net financial debt.

The reconciliation of gains/(losses) on debt with the figures in the consolidated Income statement is as follows:
Gains/(losses) on debt

(1) Note 43 of the consolidated Financial Statements.
(2) Notes 42 and 43 to the consolidated Financial Statements, included in the lines “Non-hedging derivatives and inefficiencies”.
(3) Note 42 of the consolidated Financial Statements, included in the line “Finance income related to assets at amortised cost”.
(4) Notes 42 and 43 to the consolidated Financial Statements, included in the lines “Exchange gains in foreign currency for financing activities” and “Exchange losses in foreign currency for financing activities”.

The average balance of the adjusted net financial debt is obtained by weighting the number of days during the year in which the balance of each of the transactions comprising the adjusted net financial debt remains outstanding. It thus includes the same items as those indicated in Note 21 to the Financial Statements, broken down as follows:

<table>
<thead>

2.3.1.5 Profit/(loss) of equity-accounted investees

Profit/(loss) at equity-accounted investees was a positive EUR 146 million, mainly due to the one-off effect resulting from the restructuring agreement reached with CIP on the offshore wind assets in the United States (EUR 228 million, as described in Note 7).

The negative result of this item in 2021 is a result of the EUR 75 million impairment loss on Norte Energía following its classification as held-for-sale. The remaining effects on the results of companies accounted for using the equity method amounted to EUR 36 million.

2.3.1.6 Net profit for the period attributable to the parent

Net profit/(loss) for the year amounted to EUR 4,339 million, up EUR 454 million (11.7%) on the previous year’s total of EUR 3,885 million. The exchange rate effect was positive to the tune of EUR 87 million.

Corporate income tax expense was down by EUR 753 million to EUR 1,161 million, compared to 2021 (EUR 1,914 million).
The corporate income tax comparison is affected by the one-off negative effect of EUR 471 million recorded in 2021 in deferred taxes due to the increase in the UK tax rate from 19% to 25% and by the non-recurring effect in 2022 of EUR 125 million due to the incorporation of Neoenergia Brasilia.

Meanwhile, other non-controlling interests increased by EUR 254 million to EUR 721 million, mainly due to higher earnings in the United States, Brazil and East Anglia 1.

3. LIQUIDITY AND CAPITAL RESOURCES

The principal objective of the IBERDROLA Group’s financial management is to ensure a robust financial profile by strengthening the solvency and equity ratios typically tracked by credit rating agencies. It seeks to do so while optimising its liquidity position and managing financial risks accordingly and combining this with a sustainable shareholder remuneration policy.

3.1 Liquidity

The IBERDROLA Group had a strong liquidity position of EUR 22,380 million at the end of 2022 (Note 4 to the consolidated Financial Statements). Counting the financing operations signed after 31 December, this figure rises to EUR 23,530 million.

This liquidity comes mainly from syndicated lines with relationship banks, loans arranged with multilateral lenders, development banks and export credit agencies, as well as cash and cash equivalents and short-term investments (between 3 and 12 months). These liquidity operations have been arranged on the main markets in which the IBERDROLA Group is present (Europe, United States and Brazil), in both the banking and capital markets.

This liquidity position covers 26 months of financing needs in the base case and 15 months in the risk scenario.

3.2 Financial solvency

3.2.1 Credit rating of IBERDROLA’s senior debt

Credit ratings by rating agency are as follows:

<table>
<thead>
<tr>
<th>Agency</th>
<th>Long-term (1)</th>
<th>Outlook</th>
</tr>
</thead>
<tbody>
<tr>
<td>Moody’s</td>
<td>Baa1 (15/06/2012)</td>
<td>Stable (14/03/2018)</td>
</tr>
<tr>
<td>Fitch</td>
<td>BBB+ (02/08/2012)</td>
<td>Stable (25/03/2014)</td>
</tr>
<tr>
<td>Standard &amp; Poor’s</td>
<td>BBB+ (22/04/2016)</td>
<td>Stable (22/04/2016)</td>
</tr>
</tbody>
</table>

(1) The above ratings may be reviewed, suspended or withdrawn by the rating agency at any time.
3.2.2 Financial solvency ratios

The calculation of the financial solvency ratios is shown below:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Adjusted FFO / Adjusted net financial debt (1)</td>
<td>%</td>

<td>%</td>
<td>22</td>
</tr>
<tr>
<td>Adjusted net financial debt/Adjusted EBITDA</td>
<td>Times</td>
<td>3.3</td>
</tr>
</tbody>
</table>

(1) As shown in the table below.

The IBERDROLA Group relies on the following main measures to assess cash generation for the period:

- Funds from Operations (FFO).
- Retained Cash Flow (RCF). FFO – Own and minority dividend payments – net flows from perpetual (hybrid) bonds.

These measures are calculated as follows:

### Millions of euros

3.3 Capital funds

3.3.1 Leverage

Adjusted net financial debt at 31 December 2022 increased by EUR 4,630 million to EUR 43,749 million, compared to EUR 39,119 million at 31 December 2021, due to the substantial investments made in the period and the significant appreciation of currencies.

Additionally, adjusted net leverage improved by (1.80)% to 42.8%, compared to 41.0% for the previous year (see Note 21).

3.3.2 Debt structure

Note 21 to the consolidated Financial Statements provides a reconciliation between the headings of the consolidated Statement of financial position and the various debt aggregates referred to in this section 3 of the consolidated Management Report.

The structure by interest rate and currency of the debt classified under “Bank borrowings, debentures or other marketable securities” after hedging is shown in Note 28.

In accordance with the policy of minimising the Company’s financial risks, foreign currency risk has continued to be mitigated by financing the international businesses in their local currency (pound sterling, Brazilian real, US dollar, etc.) or functional currency (US dollar, in the case of Mexico). Interest rate risk is mitigated by the issuance of fixed rate debt, derivatives and hedging future financing.

The breakdown of adjusted gross financial debt by source of financing is as follows:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Bond market – EUR</td>
<td>23.10 %</td>

</tbody>
</table>

The IBERDROLA Group has a comfortable debt maturity profile, with an average life of its adjusted gross financial debt of over six years. The maturity profile of the IBERDROLA Group’s debt classified under “Bank borrowings, bonds or other marketable securities” at year-end 2022 is shown in Note 28.

The average maturity of bank borrowings, bonds and other marketable debt securities is calculated pro rata to the maturity date of the long-term debt instruments, thus excluding short-term transactions.
This information is obtained mainly by making the following adjustments to the maturity profile in Note 28:

- Issues of domestic commercial paper (USCP) and Euro Commercial Paper (ECP) (Note 28).
- Drawdowns on credit lines and facilities (Note 28).
- Unpaid accrued interest (Note 28).
- Derivatives on treasury shares: swaps on treasury shares, put options sold and accumulators (Note 21).

Furthermore, during the first year, surplus cash is considered to be used to repay maturities.

### 3.4 Working capital

Working capital decreased by EUR 3,562 million compared with December 2021.

The change was mainly due to favourable court rulings in Spain, together with the change in commodity derivatives and the proceeds from the East Anglia 1 OFTO, partially offset by the increase in customer accounts receivable and the impact of collateral in organised markets.

(1) Not including cash and cash equivalents or debt derivative assets related to financial transactions (Note 21).

(2) Not including financial debt or debt derivative liabilities related to financial transactions (Note 21).
4. MAIN RISKS AND UNCERTAINTIES

4.1 Comprehensive risk control and management system

Group companies are subject to various risks inherent in the different countries, territories, sectors and markets in which they operate and the activities they carry out, which may prevent them from achieving their objectives and successfully implementing their strategies.

Aware of the importance of this matter, IBERDROLA’s Board of Directors makes every effort to ensure that the significant risks inherent to all the activities and businesses of the Group’s companies are appropriately identified, measured, managed and controlled, and to establish, through the General Risk Control and Management Policy, the basic mechanisms and principles necessary for the sound management of the risk/reward ratio with a level of risk that enables it to:

- attain the strategic objectives determined at Group level with volatility curtailed;
- provide the maximum level of assurance to the shareholders;
- contribute to fulfilling the Sustainable Development Goals (SDGs) approved by the United Nations (UN), with a special focus on Goals 7 and 13;
- protect the results and reputation at Group level;
- defend the interests of shareholders, customers and stakeholders of Group companies;
- ensure corporate stability and financial strength in a sustained fashion over time; and
- disseminate a risk culture among the professionals of the Group’s companies through communication and training.

When acting upon the commitment expressed through the core principles, the Board of Directors and its Executive Committee rely on the support of the Audit and Risk Supervision Committee which, as an advisory body, supervises and reports on the adequacy of the system for assessing, controlling and managing all material risks, with the support of the IBERDROLA’s Risk Management and Internal Assurance Division (or the division which assumes its functions), which reports functionally to that committee. This process is carried out in coordination with the audit and compliance committees that exist at the country subholding companies.

Every action aimed at controlling and mitigating risks will conform to the following main principles of conduct:

a) Integrate the risk/opportunity vision into the Group’s management, through a definition of the strategy and the risk appetite and the inclusion of this variable in strategic and operating decisions.
b) Segregate functions, at the operating level, between risk-taking areas and areas responsible for the analysis, control and monitoring of such risks, ensuring an appropriate level of independence.

c) Guarantee the proper use of risk-hedging instruments and the maintenance of records thereof as required by applicable law.

d) Disclose transparent information to regulatory agencies and the principal external players regarding the risks facing the Group’s companies and the operation of the systems developed to control such risks, maintaining suitable channels that favour communication.

e) Ensure adequate levels of compliance with the corporate governance rules established by the Company through its Governance and Sustainability System and the update and continuous improvement of such system within the framework of best international practices as to transparency and good governance; and implement the monitoring and measurement thereof.

f) Act at all times in compliance with the values and standards for conduct enshrined in the Code of Ethics, under the principle of “zero tolerance” for the commission of unlawful acts and situations of fraud set out in the Crime Prevention Policy and the Anti-Corruption and Anti-Fraud Policy and the principles and good practices set forth in the Corporate Tax Policy.

The General Risk Control and Management Policy and the basic principles underpinning it take the form of a three lines of defence model and a comprehensive risk control and management system, supported by IBERDROLA’s Risk Committee and based upon a proper definition and allocation of duties and responsibilities in operations and supervision that implement a set of suitable procedures, methodologies and tools for supporting the various stages and activities of the system, including:

a) The existence of a structure of policies, guidelines and limits, as well as risk indicators, and the corresponding mechanisms for their approval and implementation, which are there to review and establish the risk appetite annually assumed in both qualitative and quantitative terms, in accordance with the objectives set out in the multi-year plan and the corresponding annual budgets, both at Group level and at each of its main subsidiaries.

b) The ongoing identification of significant risks and threats based on their possible impact on key management objectives and the Financial Statements (including contingent liabilities and other off-balance sheet risks).

c) The analysis of such risks, both at each corporate business or function and taking into account their combined effect on the Group’s companies as a whole.

d) The measurement and control of risks by following procedures and standards which are homogeneous and common to the Group’s companies as a whole.

e) The analysis of risks associated with new investments, as an essential element of decision-making based upon profitability/risk.
f) The maintenance of a system for monitoring and controlling compliance with policies, guidelines and limits, by means of appropriate procedures and systems, including the contingency plans needed to mitigate the impact of the materialisation of risks.

g) The ongoing assessment of the suitability and effectiveness of the application of the system, as well as best practices and recommendations in the area of risks, with a view to eventually incorporating them into the model.

h) The audit by the Internal Audit Division of the comprehensive risk control and management system.

In addition, the General Risk Control and Management Policy is further developed and supplemented by the policies listed below, which are also subject to approval by the Company’s Board of Directors:

a) Corporate Risk Policies:
   - Corporate Credit Risk Policy
   - Corporate Market Risk Policy
   - Operational Risk in Market Transactions Policy
   - Insurance Policy
   - Investment Policy
   - Financing and Financial Risk Policy
   - Treasury Share Policy
   - Risk Policy for Equity Interests in Listed Companies
   - Purchasing Policy
   - Information Technology Policy
   - Cybersecurity Risk Policy.
   - Occupational Safety and Health Risk Policy
   - Reputational Risk Framework Policy

b) Specific Risk Policies for the various businesses of the Group:
   - Risk policy of the Electricity Generation and Customers businesses of the IBERDROLA Group
   - Risk Policy for the Network Businesses of the IBERDROLA Group.
   - Risk Policy for the Real Estate Business of the IBERDROLA Group.
The General Risk Control and Management Policy, as well as a Summary of the Corporate Risk Policies and a Summary of the Specific Risk Policies for the various Group businesses are available on the corporate website (www.iberdrola.com).

In order to align the risk impact with the established risk appetite, the Executive Committee of the Board of Directors, acting upon a proposal of the business or corporate divisions involved and upon a prior report from IBERDROLA’s Risk Committee, annually reviews and approves specific guidelines regarding risk limits in the Corporate Risk Policies.

The country subholding companies are responsible for adopting and implementing IBERDROLA’s risk policies and for approving the guidelines regarding specific risk limits, taking into account the specific needs and circumstances of the businesses in the different countries or territories.

The governing bodies of the head of business companies of each country or region must approve specific risk limits applicable to each of them and implement the necessary control systems to ensure compliance.

Listed country subholding companies, by virtue of their own special framework of strengthened autonomy, have their own risk policies approved by their competent bodies, aligned with those of IBERDROLA.

The risk factors to which the Group is generally subject are listed below:

a) Corporate governance risks: relating to a possible breach of: (i) applicable law, (ii) the provisions of the governance and sustainability system, (iii) the recommendations of the CNMV’s Code of Good Governance and its practical guides, and (iv) international standards in this realm.

The consequences may include: (i) the challenging of corporate resolutions; (ii) participation of dissenting shareholders at the General Shareholders’ Meeting; (iii) sanctions or requirements imposed by the CNMV; and (iv) divestment or lack of interest among investors in acquiring IBERDROLA shares.

b) Market risks: exposure of the results and equity of the Group’s companies to variations in prices and other market variables, such as:

– Financial: exchange rates, interest rates, credit spreads, inflation, liquidity, solvency and the value of financial assets and liabilities.

– Energy and other commodity prices: electricity prices, gas and other fuel prices, CO₂ emission allowances or other support mechanisms for renewables, as well as those related to other commodities (among others steel, aluminium, copper and polysilicon).

c) Credit risks: defined as the possibility that a counterparty fails to perform its contractual obligations, thus causing an economic or financial loss to the Group’s companies. Counterparties may be end customers, counterparties in financial or energy markets, partners, suppliers or contractors.
d) Business risks: defined as the uncertainty regarding the performance of key variables inherent to the various activities carried out by the Group’s companies through their businesses, such as the nature of demand, weather conditions and the strategies of different players.

e) Political and regulatory risks: those arising from regulatory changes made by the various regulators, such as changes in remuneration of regulated activities or in the required conditions of supply, or in environmental or tax regulations, including risks related to political changes that could affect legal certainty and the legal framework governing the businesses of the Group’s companies in each jurisdiction, the nationalisation or expropriation of assets, the cancellation of operating licences and the early termination of government contracts.

f) Operational, technological, environmental, social and legal risks: those related to direct or indirect economic losses resulting from external events or inadequate internal procedures, including the following:

- Technological failures, human error and technological obsolescence.
- Operation and construction of facilities.
- Supply and the supply chain.
- Cybersecurity and information systems.
- The health and safety of people.
- Climate change, extreme natural phenomena and pandemics.
- Regulatory compliance.
- The reliability of financial and non-financial information.
- Fraud and corruption.
- Litigation, arbitration and tax matters.

g) Reputational risks: potential negative impact on the value of the Group’s companies resulting from the conduct of the company falling short of expectations among the various stakeholders, as defined in the Stakeholder Relations Policy, including behaviours or conduct related to corruption.

Given the multidimensional nature of the risks, the taxonomy defined in the system envisions additional classification variables for improved monitoring, control and reporting. These additional categories include:

- Classification of risks into Structural, Hot Topics and Emerging Risks, the latter in the sense of possible new threats the impact of which is as yet uncertain and of undefined probability, but which are growing and could become material for the Group’s companies.

- The inclusion of risk factors that are complementary to the main risk factor, such as financial, environmental, social and governance (ESG), fraud or corruption, tax, health, cybersecurity or third party.

The Audit and Risk Supervision Committee of the Board of Directors periodically monitors the situation of the Company’s risks:
It reviews the Group’s quarterly risk reports, which include monitoring compliance with risk limits and indicators and updated key risk maps, submitted by the Group’s Chief Risk Officer & Head of Internal Assurance.

It also coordinates and reviews the risk reports sent at least on a semi-annual basis by the audit and compliance committees of the main subsidiaries, including the country subholding companies of the main countries or regions in which the Group operates and which, along with the appearances made by the Group’s Chief Risk Officer & Head of Internal Assurance, are used to draw up a risk report for the Board of Directors at least semi-annually.

For further details, see section E. “Risk control and management systems” of the Corporate Governance Report for financial year 2022, the section ”Long-term risks and opportunities. Comprehensive risk control system” of the 2022 Sustainability Report and the Risks section of the Integrated Report – February 2023.

4.2 Credit risk

The IBERDROLA Group is exposed to the credit risk arising from the possibility that counterparties (customers, suppliers, financial institutions, partners, insurers, etc.) fail to comply with contractual obligations.

Risk is properly managed and limited, depending on the type of transaction and the creditworthiness of counterparties. In particular, there is a Corporate Credit Risk Policy setting the framework and action principles for proper risk management, which are further developed at business and country level (admission criteria, approval flows, authority levels, rating tools, exposure measurement methodologies, etc.) through procedures.

With regard to credit risk on trade receivables from electricity and gas retail supply activity in the liberalised market, the historical cost of defaults has remained close to 1% of total turnover of this activity across all countries in which it is carried out.

In the Networks businesses in Spain and the UK, no energy is supplied, and in the Networks businesses in the United States and Brazil, in general, arrears are recovered through rates.
4.3 Financial risks

4.3.1 Interest rate risk

The IBERDROLA Group is exposed to the risk of fluctuations in market interest rates affecting cash flows and the market value of debt in respect of items in the Statement of financial position (debt and derivatives). In order to adequately manage and limit this risk, the IBERDROLA Group manages annually the proportion of fixed and variable debt and establishes the actions to be carried out throughout the year: new sources of financing (at a fixed, floating or indexed rate) and/or the use of interest rate derivatives.

Bank borrowings, bonds and other marketable securities arranged at floating rates and cash placements of the IBERDROLA Group are largely pegged to market rates (mainly Euribor, SONIA, Libor-dollar or SOFR and the IPCA CDI for the debt of the Brazilian subsidiaries).

The IBERDROLA Group also arranges derivatives to hedge interest rate risk on future financing. The volume of such derivatives arranged by the IBERDROLA Group at 31 December 2022 is described in Note 29 to the consolidated Financial Statements.

The Group’s debt structure at 31 December 2022, after considering the hedge provided by the derivatives and the exposure to fluctuations in interest rates, is included in Note 28 to the Financial Statements.

4.3.2 Currency risk

Currency risk resulting from fluctuations in foreign currency rates compared to the functional currency can occur in the following scenarios:

- Collections and payments for supplies, services or equipment acquisition in currencies other than the operating currency.
- Income and expenses incurred by certain foreign subsidiaries indexed to currencies other than the operating currency.
- Debt and financial expense denominated in currencies other than the operating currency.
- Consolidated profit or loss of the foreign subsidiaries (mainly US dollar, pound sterling and Brazilian reais), since the IBERDROLA Group’s reporting currency is the euro.
- Consolidated net equity value of investments in foreign subsidiaries.
- Expense for taxes in Mexico because the functional currency (United States dollar) differs from the currency for purposes of calculation of corporate tax (Mexican peso).

The IBERDROLA Group reduces this risk by:
– Carrying out all its economic flows in the operating currency of each Group company, provided that this is possible and economically viable and efficient, or otherwise through the use of financial derivatives.

– Financially hedging, as far as possible, the risk of transfer of earnings expected for the current year, thereby limiting the ultimate impact on Group earnings.

– Financially hedging, as far as possible, the exchange rate risk in the Mexican corporate tax, thereby limiting the ultimate impact on the earnings of Mexico and of the Group.

– Mitigating the impact on the consolidated net equity value of a hypothetical depreciation of currencies due to the Group’s investments in foreign subsidiaries by maintaining an adequate percentage of foreign currency debt, as well as through financial derivatives.

The sensitivity of consolidated profit and equity to changes in the US dollar/euro, pound sterling/euro and Brazilian real/euro exchange rates is described in Note 4 to the Financial Statements. Detailed information on foreign currency debt is included in Note 28 to the Financial Statements.

4.3.3 Liquidity risk

The exposure to adverse situations in the debt or capital markets or to events resulting from the IBERDROLA Group’s economic and financial situation might hinder or prevent the IBERDROLA Group from obtaining the financing required to properly carry on its business activities.

The Group’s liquidity policy is designed to ensure that it can meet its payment obligations without having to rely on financing under unfavourable terms. For this purpose, various management metrics are used, such as the arrangement of committed credit facilities of sufficient amount, term and flexibility, diversification of the hedging of financing needs through access to different markets and geographical areas, and diversification of the maturities of the debt issued.

Cash and cash equivalents, liquid assets, short-term investments and loans and receivables are shown in Note 4 to the consolidated Financial Statements.

4.3.4 Solvency risk

The IBERDROLA Group faces the risk of its financial situation getting worse and leading to a downward revision of the credit rating assigned by rating agencies, which may make financing more expensive or unavailable.

In order to mitigate this risk, the IBERDROLA Group continuously monitors the solvency and equity ratios most commonly followed by rating agencies as well as the risks that may have an impact on those ratios in order to anticipate or undertake actions aimed at correcting possible instances of non-compliance.
Moreover, communication is active with investors and rating agencies in order to explain the performance of financial indicators and their deviations, if any.

4.4 Regulatory and political risks

The businesses of the IBERDROLA Group are subject to laws and regulations concerning tariffs and other regulatory aspects of their activities in each of the countries in which they are carried out. The introduction of new laws and regulations or amendments to the already existing ones may have an adverse effect on our operations, annual results and economic value of our businesses.

Sections 4.5.1 and 4.5.2 summarise the regulatory frameworks in place in the main markets where the Group operates, as well as the most relevant regulatory measures approved in 2022 or expected to be implemented in 2023.

It is important to highlight the exceptional situation of the energy markets as a consequence of Russia's invasion of Ukraine in 2022, which has led to the adoption of various extraordinary and temporary regulatory measures in Europe designed to prevent high energy prices in the wholesale markets from being passed on to customers and also to cap any extraordinary profits that electricity generators and retail suppliers might make. The duration of this situation is uncertain.

Country risk

All of the activities of the IBERDROLA Group are exposed, to a greater or lesser extent depending on their nature, to various risks inherent to the country where they are carried out:

   a. Imposition of monetary restrictions and/or limitations on the movement of capital.
   b. Changes in the trade environment and in government policies.
   c. Economic crises, political instability and social unrest affecting operations.
   d. Nationalisation or expropriation of assets.
   e. Transfer and convertibility of currency.
   f. Cancellation of operating licences.
   g. Early termination of government contracts.
   h. Changes in tax rates in levies and taxes and/or new taxes, including tariffs.
   i. Changes in the economic terms governing the hand-back of concessions.
   j. Worsening of sovereign ratings, generating an increase in country risk premia.
   k. Other regulatory changes.

The results of our subsidiaries, their market value and their contribution to the parent company of the Group may be affected by such risks.

The IBERDROLA Group’s main operations are concentrated in Spain, the United Kingdom, the United States, Brazil and Mexico, which are countries with low or moderate risk and whose credit ratings at 31 December 2022 were as follows:
The IBERDROLA Group also has a significant presence in countries such as Germany, France, Australia and Portugal. The presence in countries other than those mentioned above is not significant at the Group level from an economic point of view.

### 4.5 Business and market risks

The Group has a presence in the regulated segments of electricity transmission and distribution in Spain, the United Kingdom, the United States (through AVANGRID) and Brazil (through NEOENERGIA). In the United States, the Group also has a presence in the natural gas distribution sector.

The IBERDROLA Group operates in the renewables generation sector, mainly in Spain, the United States, the United Kingdom, Mexico, Brazil and other countries, as well as operating sustainable thermal generation assets in Spain, Mexico and Brazil. The Group also has back-up plants for its renewable business in the United States and Australia.

Lastly, the IBERDROLA Group has a retail supply business of electricity and gas to end customers in Spain, the United Kingdom, Mexico, Brazil and other countries.

The operating details provided in this section show the situation at 31 December 2022, unless stated otherwise. Sensitivities are shown in annual terms (following 12 months).

#### 4.5.1 Networks business

The regulations of each country in which the IBERDROLA Group’s network businesses operate establish frameworks, which are regularly revised, thus meaning that these businesses will receive reasonable and predictable returns. These frameworks include incentives and penalties for efficiency, service quality and, where applicable, for default management. Any structural and significant changes to the aforementioned regulations may represent a risk for said businesses.

In general, the profitability of the IBERDROLA Group’s network businesses is not exposed to demand risk, except for the Brazilian subsidiaries.
The IBERDROLA Group’s network businesses in Spain and in the United Kingdom do not sell energy, so they are not exposed to any market risk associated with energy prices.

The Group’s network businesses in Brazil and some networks subsidiaries of AVANGRID in the United States sell energy to regulated customers at a previously approved tariff. In the case of prudent procurement management in line with the provisions established by the regulator, the regulatory frameworks in both countries guarantee that sums will be collected in subsequent tariff readjustment revisions for possible purchase price deviations from those previously recognised in the tariff.

That being said, in the case of extraordinary events (extreme drought in Brazil, catastrophic storms in the United States, etc.), occasional temporary imbalances between payments and collections may arise with an impact on the cash flows of some of these businesses and potentially on profits recognised under IFRS.

In addition to the risks discussed in this section, the Networks businesses face operational risks, described in section 4.6.

a. Spain

The business manages 11.36 million supply points. The current regulatory model is based on Electricity Industry Law 24/2013 of 26 December, as further developed by various royal decrees and ministry orders. The model is based on recognised historical investment (at 31 December 2014) remunerating capital for depreciation and certain operation and maintenance costs. In addition, every year the regulated asset base is expanded to include the recognised investments made during the period. Quality incentives and losses (technical and commercial) are added to this. Remuneration is also set for other regulated activities required for the activity, such as reading, subscription, structure, etc., apart from distribution itself.

On 20 November 2019 the remuneration rate applicable in the upcoming six-year regulatory period 2020-2025 was set and published in the Official Spanish Gazette (Boletín Oficial del Estado – BOE) (WACC 5.58%). On 19 December 2019 the applicable methodology was established and published in the BOE.

It should be noted that the remuneration for 2017, 2018 and 2019 is currently under appeal by the Group.

b. United Kingdom

The Group operates in the United Kingdom through its subsidiary Scottish Power, Ltd., which manages the following licences, comprising 3.55 million supply points:

– SP Distribution PLC (SPD) and SP Manweb PLC (SPM).
– SP Transmission PLC (SPT).
The framework of remuneration for electricity transmission and distribution activities in the UK is in accordance with a price control model based on the recognised cost of capital (WACC), the depreciation of assets, and operating and maintenance costs, plus an incentive which is obtained if management is better than the regulatory standard, and which the companies retain (in part) in the following tariff revision.

The current regulatory model for SPD and SPM is based on the RIIO ED1 framework, and on the RIIO T2 framework in the case of SPT. Recognised ROE after tax (in real terms) is 6% for SPD and SPM and 4.25% for SPT. The SPT revision (RIIO T2) is valid from April 2021 to April 2026. The latest tariff revision for electricity distributors (RIIO ED1), including SPD and SPM, is valid from April 2015 to March 2023, whereupon the five-year RIIO ED2 period will begin (until March 2028), with an ROE of 5.23%.

The regulator (OFGEM) also establishes incentives/penalties for safety, environmental impact, consumer satisfaction, social obligations, connections and quality, which may have an effect on the Income statement.

c. United States

The IBERDROLA Group operates in the United States through its listed subsidiary AVANGRID, which in turn has the following subsidiary networks companies (which manage 2.31 million electricity supply points and 1.04 million natural gas supply points):

- New York State Electric & Gas (NYSEG), New York, with a 3-year rate case in force since April 2020 (base ROE of 8.80% for electricity distribution). Remuneration rate in the process of updating.

- Rochester Gas and Electric (RG&E), New York, with a 3-year rate case in force since April 2020 (base ROE of 8.80% for electricity distribution). Remuneration rate in the process of updating.

- Central Maine Power (CMP), Maine, whose annual rates are in force since 1 July 2014. They may be extended for its electricity distribution business (base ROE of 9.25%) and transmission business (base ROE of 10.57%). The ROE calculation method for the transmission business is being revised by the FERC. Remuneration rate in the process of updating.

- United Illuminating (UI), Connecticut, with rates in force since 1 January 2017 for its electricity distribution business (base ROE of 9.1%) and transmission business (base ROE of 10.57%). The ROE calculation method for the transmission business is being revised by the FERC. Remuneration rate in the process of updating.

- As well as the following natural gas distribution companies:
  - Maine Natural Gas Corporation (MNG), ROE of 9.55% and 10-year rates effective until 2026
  - Connecticut Natural Gas (CNG), 9.30% ROE and three-year tariffs effective since 2019
  - Southern Connecticut Gas (SCG), ROE of 9.25% and rates for three years effective since 2018 and
  - Berkshire Gas (BG), ROE of 9.70% with rates fixed until November 2025.
Companies carrying on regulated business in the United States are exposed to risks associated with the regulations of a number of federal regulatory bodies (FERC, CFTC, DEC) and state commissions, responsible for establishing the regulatory frameworks for the various companies subject to regulation (tariffs and other conditions).

The distributors’ tariff plans have been designed to reduce the risk to which the business is exposed through mechanisms for deferral, reconciliation and provisions for costs. Regulated distributors pass on the costs of gas and electricity to end customers, thereby mitigating any impacts of fluctuations in demand.

d. Brazil

The IBERDROLA Group operates in Brazil through its listed subsidiary NEOENERGIA, which in turn has the following subsidiary networks companies (76 TWh in energy distributed in 2022), managing approximately 16.04 million supply points:

- Elektro Redes, S.A. (ELEKTRO), operating in the states of São Paulo and Mato Grosso do Sul, with 2.9 million points of supply. Rates in force until August 2023 and WACC of 7.15%;

- Companhia de Eletricidade do Estado do Bahia (Coelba), operating in the state of Bahia, with 6.4 million supply points. Rates in force until April 2023 and WACC of 7.15%;

- Companhia Energetica de Pernambuco S.A. (Celpe), operating in the state of Pernambuco, with 3.9 million supply points. Rates in force until April 2025 and WACC of 7.15%;

- Companhia Energética do Rio Grande do Norte (Cosern), operating in the state of Rio Grande do Norte, with 1.5 million supply points. Rates in force until April 2023 and WACC of 7.15%;

- Neoenergia Brasilia, operating in the Federal District, with 1.2 million supply points. Rates in force until October 2026 and WACC of 7.15%;

- Several transmission assets with their own specific regulation.

The Brazilian regulatory framework is based on a system of price caps that is revised every four or five years, depending on each company’s concession contract, with tariffs being revised annually by the regulator based on predetermined parameters. Coelba, Cosern and Neoenergia Brasilia have a five-year revision term and Celpe and Elektro have a four-year revision term.

Brazilian legislation applicable to the regulated electricity distribution business establishes two types of costs: i) “Plot A”, which includes the costs of energy, transmission and other obligations and regulatory charges, which can be recovered through tariffs (“pass through”) in accordance with the conditions and limits imposed by ANEEL, and ii) “Plot B”, which includes remuneration for investment and the costs of operation and maintenance (calculated using a reference model that compares all distribution companies in the country and determines efficient cost levels, which generates either an incentive or a risk for the investor).
ANEEL also acknowledges other smaller incentives to minimise default and impairment of service quality and customer satisfaction that can affect the Income statement.

Pursuant to current legislation, electricity distribution companies transfer the cost of supplying electricity to the end customer through the regulated tariff, provided the energy contracted is between 100% and 105% of the demand required.

In line with the liberalisation process, the minimum demand has gradually reduced for a consumer to be classified as free. The figure has been set at 1,000 kW since 1 January 2022.

4.5.2 Production and commercial activities

The IBERDROLA Group operates in the renewables production sector, mainly in Spain, the United States, the United Kingdom, Mexico and Brazil, as well as other countries. This segment includes hydroelectric, wind (onshore and offshore) and photovoltaic generation, as well as storage (pumping and batteries) technologies.

The IBERDROLA Group also has a wide array of sustainable thermal production plants in Spain and Mexico, and a single thermal plant in Brazil. There are also back-up plants for its renewable business in the United States and Australia.

Lastly, the IBERDROLA Group is present in the retail supply of electricity and gas to end customers in Spain, the United Kingdom, Mexico, Brazil and other countries.

Market risk

Market prices for electricity, both wholesale and retail, are closely correlated with the prices of fuel (predominantly gas) and of the emission allowances needed to produce electricity. These prices are subject to uncertainty (varying according to the structure of each country’s electricity market and its regulation). Forward electricity prices are further influenced by projections of new generation plants coming on stream and of increases or decreases in future reserve capacity.

The margin of the generation and commercial segments is subject to the risk of the spread between the price obtained (either from customers in the case of retail sales or from the markets in the case of wholesale sales) and the cost of production. In the case of sales to customers, the uncertainty in the margin is strongly influenced by the greater or lesser degree of competition between retail suppliers.

The IBERDROLA Group’s exposure to market risk is low overall, due to:

- Part of its production is sold at regulated prices (e.g. East Anglia and Wikinger), has regulatory support mechanisms (ROCs in the United Kingdom, Rinv in Spain, CELs in Mexico, etc.), or has been established from the outset through long-term sales agreements (e.g. most of the thermal plants in Mexico, through contracts with Comisión Federal de Electricidad, CFE).
- The rest of the energy is sold to end customers in Spain, the United Kingdom, Mexico, Brazil and Australia. Energy is sold at fixed or indexed prices, alongside other services, for delivery within the usual time frames of the retail markets of the countries in which it operates. The offsetting of risk positions between generation and retail supply activities therefore offers a natural risk-hedging mechanism. The remaining risk is mitigated through wholesale market transactions (through physical transactions and derivatives).

- Of particular note is the high percentage of long-term fixed-price contracts for the sale of energy which the Group has in Avangrid, as well as numerous hydroelectric plants in Brazil (contracts with Coelba and Celpe) and Australia.

- In new investments, incentives are provided for sale at regulated prices or the signing of long-term fixed-price PPAs.

- Centralised management of positions by a specialised area (Energy Management), including the sale and purchase of surpluses and shortfalls.

In those markets where there is not enough uncommitted own production (Italy, France, Germany), Energy Management supplies electricity and gas to the retail activity at wholesale market prices (hourly or forward) in accordance with the usual practices of each of the countries.

**Other risks**

In addition to the aforementioned market risk, other notable risks include:

- **Regulatory:** inter alia, i) intervention in the operation of wholesale markets, ii) modification or elimination of tariffs, premiums and incentives for renewables, iii) levying or increasing energy charges on retail supply and iv) other obligations (energy anti-poverty measures, maximum regulated prices in the United Kingdom, etc.).

- **Natural resource:** the Group’s renewable energy businesses may be exposed, to a greater or lesser extent, to resource risk (mainly hydro and wind and, to a lesser extent, solar):
  - In the medium to long term, years with lower than average water and/or wind resources are offset by years with above-average overall resources. As a consequence of climate change, structural changes of the hydrological resource may be seen in the long term.
  - The risk of water scarcity in a given year largely affects Spain, and to a lesser extent Brazil.
  - The risk of wind resources in a given year affects all countries in which the Group operates. At global level, the Group considers that this annual risk is partially mitigated by the large number of wind farms in operation and their geographical diversification.
– **Promotion**: the Group has major renewable projects under construction and development in the different countries in which it operates. In the particular case of offshore wind projects, it must be highlighted that they require large investments subject to complex proceedings and entail other risks such as long construction deadlines, operating difficulties and technological risks. Commodity price risk (aluminium, steel, polysilicon, etc.) is closed at the time the decision is made.

– **Evolution of demand**: stemming from temperature factors (largely affected by global warming), the general economic situation, energy efficiency measures, electrification of the economy, etc.

– **Operational** (analysed in section 4.6): from both typical events and potentially extreme weather events as a consequence of climate change. The risks associated with nuclear power plants in Spain stand out.

It should be noted that supplementary discretionary trading activities are limited to certain countries only, are small-scale in nature and their overall risk is limited by individual stop-loss limits, the aggregate sum of which may never exceed the maximum limit of 1% of the expected consolidated net profit. IBERDROLA has maintained low levels of discretionary trading in recent years in line with the widespread move away from market speculation. In December 2022, the notional value of derivatives used in speculative trading (calculated in accordance with the criteria set forth in the European Market Infrastructure Regulation (EMIR)) was EUR 27 million for commodity derivatives. This value is much lower than the EUR 4,000 million threshold currently set for non-financial companies in the European regulation (EMIR).

The exceptional situation in energy markets as a result of Russia’s invasion of Ukraine has prompted a number of regulatory measures to curb inflation. These measures aim to avoid passing on high energy prices on wholesale markets to customers and also to limiting the profits made by producers who sell energy directly on wholesale markets. Particularly noteworthy are the measures adopted in a number of European countries, including Spain and the United Kingdom.

**a. Spain**

The Group currently has an installed capacity of renewable energy in Spain of 5,952 MW of wind power, 9,702 MW of hydroelectric power, 2,604 MW of photovoltaic power and 254 MW of mini-hydro power. In Spain, the Group also has 9,168 MW of installed capacity in conventional generation, of which 3,177 MW are nuclear power, 5,695 MW combined cycles and 296 MW co-generation. The sales volume of the free-market retail supply business in Spain amounted to 66.7 TWh of electricity and 15 TWh of gas in 2022. Additionally, the last resort tariff retail supply subsidiary supplied 6.9 TWh of electricity.
Hydroelectric production risk

The lesser or greater availability of hydroelectric resources has an impact on the marginal hour prices of the Spanish electricity system. Despite having a large water storage capacity in Spain, the Group’s annual results depend significantly on annual rainfall contributions. The changes in output from a dry year to a wet year with respect to the average reference value can be up to -4,000 GWh and +5,000 GWh respectively in Spain, with an estimated impact range of EUR -196 million and EUR +245 million. In the medium to long term, dry years are offset by wet years.

Regulatory framework for wind and mini-hydroelectric

The wind and mini-hydro capacity installed by the Group prior to 2013 was subject to a specific remuneration regime in accordance with Law 24/2013 and Royal Decree 413/2014. Said regime, combining market income and a supplement per MW, guarantees reasonable profitability before taxes to the plants, which was set at 7.398%. Royal Decree-Law 17/2019 was approved in late 2019, extending the value of reasonable profitability through to 2031. Facilities built prior to 2004 have zero supplement per MW.

In accordance with Royal Decree 413/2014:

a. at the end of each regulatory half-period of three years, various remuneration parameters for standard facilities are reviewed, including price estimates for the following three years, as well as past prices. This is done by calculating whether the set limits (bands) have been exceeded in the past three years; and

b. the existing plants were segmented based on various criteria such as commissioning year and size, and they were assigned standard investment values, useful regulatory life, peak factor, O&M expenses and hours.

c. In order to qualify for investment remuneration, wind farms have to meet a minimum number of operating hours.

Renewable plants commissioned after 2013 either only receive market income (or PPA agreements) or had to participate in bids (which took place in 2016 and 2017) to access the Specific Remuneration Regime described above. The Government-driven auctions launched in 2021 to achieve the NECP targets have continued in 2022, guaranteeing fixed prices with the system for a period of time. The production of hydroelectric power plants is not regulated by Royal Decree 413/2014.

Commodity price risk

Given the current market conditions, the production price of the combined cycle plants defines, to a large extent, the price of electricity in Spain since combined cycles provide the marginal technology necessary to cover electricity demand. With variable productions costs with natural gas in the region of EUR 75/MWh, a 5% change in prices could give rise to an impact of EUR ±42 million on operating results.

The price of CO2 also influences the cost of production at thermal power plants. With CO2 prices around EUR 84 per tonne, a 5% change in prices could give rise to an impact of EUR ±8 million on operating results.
In 2022, the IBERDROLA Group supplied gas at prices indexed to European markets, with uncertainty associated with the difference between the purchase price and the price at which it is sold to customers or the price of gas consumed by combined cycle plants.

**Demand risk**

Given the current market conditions, where the price is primarily determined by the generation cost at combined cycle plants, which make up around 23% of the generation mix, demand fluctuations that could occur within one year are not deemed to impact on marginal technology in the market. The impact on the market price of a 1% change in demand is therefore minimal, amounting to approximately EUR 0.25 per MWh.

A moderate drop in demand in Spain does not affect the scheduled output of the Group’s nuclear, hydroelectric and wind power plants, since there is a mandatory electricity market in Spain guaranteeing the efficient dispatch of output from all generation technologies.

Nevertheless, there is an impact if a drop in electricity demand may entail an equivalent reduction in the Group's retail sales (and the loss of the associated margin), mitigated to some extent by increasing sales of own energy on the wholesale market. This same effect of loss of margin on retail sales can be seen in the demand for gas.

Taking both effects into account, it is estimated that a 1% fluctuation in demand would have an impact of around EUR ±20 million overall, for both electricity and gas.

**b. United Kingdom**

The Group currently has an installed capacity of renewable energy in the United Kingdom and Ireland of 1,971 MW in onshore wind farms and 908 MW in offshore wind farms in operation, including an interest of 50% in West of Duddon Sands (389 MW) and the East Anglia 1 offshore wind farm (714 MW).

Sales of the retail supply business in 2022 amounted to 18.5 TWh of electricity and 22.92 TWh of gas, both lower than in 2021, owing to the impact of price hikes on consumer habits.

The bulk of the Group’s onshore wind farms currently in operation, as well as West of Duddon Sands, were developed under current Renewables Obligation legislation. Under such legislation, the total revenues obtained reflect the price of the energy produced (at market) and the sale of associated Renewables Obligation Certificates (ROCs).

UK regulations require that electricity suppliers meet ROC delivery date requirements per MWh sold that are 10% more than are expected to be available on an annual basis, and determine the price at which the rest must be bought, which in practice amounts to setting a reference price of the ROCs.
For facilities commissioned subsequent to 1 April 2017 (for onshore wind farms, those built from 12 May 2016), the revenue system is market-based, except for specific assets that have opted for the “Contract for Difference” (CfD) remuneration scheme, which eliminates market risk for 15 years. Such is the case of the East Anglia 1 offshore wind farm and the recently awarded East Anglia 3 facility.

The fixed prices for the projects under the CfD scheme are established on a project-by-project basis through public tenders. The counterparty guaranteeing this price, The Low Carbon Contracts Company, finances its potential payments by imposing a levy on retail suppliers in accordance with their market share, and therefore credit risk vis-à-vis this counterparty is practically zero.

The portfolio of offshore wind projects under development in the country includes the East Anglia Hub, as well as offshore land rights in Scotland (of up to 4.5 TW).

In the retail business, following the entry into force of the Domestic Gas and Electricity Act 2018, OFGEM publishes the maximum prices that retail suppliers may charge to end customers under the Standard Variable Tariff. Since October 2022, these price caps have been updated quarterly and, also since October 2022, they have been capped under the Energy Price Guarantee scheme, which will run until the end of March 2024. While the new rules in place allow retail suppliers to reasonably recover all their costs, there may be mismatches in the short term.

The structure of the tariffs applied, both those defined freely and those fixed by the regulator, means that the IBERDROLA Group’s margin is affected by changes in demand. In the UK, the impact of temperature on energy demand is important, mainly for household customers who use gas to warm their homes. In this regard, it is estimated that in a warm year, the actual customers’ demand would be 1.5% lower for electricity and 10.9% lower for gas compared to average values.

c. United States

The IBERDROLA Group is present in the renewables business in the United States through its listed company AVANGRID, which has an installed capacity of 7,825 MW in onshore wind farms and 497 MWdc in operational photovoltaic plants, plus a further 636 MW in thermal power.

AVANGRID aims to secure between 85% and 95% of its capacity through long-term PPAs and financial transactions to reduce volatility. At year-end 2022, approximately 72% of its capacity was sold through PPAs with an average term of 10 years, and a further 11% was secured by hedges.

With electricity prices around USD 40MWh, a 5% change in prices could give rise to an impact of EUR ±8 million on operating results.

AVANGRID has a significant portfolio of offshore wind energy projects, including the 800 MW Vineyard wind farm under construction, which is scheduled for commercial operation in 2024.
d. Brazil

In Brazil, the Group, through NEOENERGIA, currently has 11 onshore wind farms and 2 solar plants in operation under long-term and short-term agreements with the country’s distributors and free consumers respectively. For long-term agreements with distributors, surpluses and shortages in the production contracted with the distributors are settled over periods of four years, and surpluses must be offered and shortages purchased at market prices.

Also in Brazil the Group has 3,031 MW in hydroelectric plants (consolidated power and equity-accounted interests), of which approximately 55% is sold to electricity distribution companies under long-term contracts (PPAs).

Neoenergia has a combined cycle gas plant of 533 MW in the state of Pernambuco, with long-term purchase and sale agreements nearing maturity. In December 2021, the plant won the auction held by ANEEL, selling its available capacity (498 MW), with supply commencing in July 2026, for a 15-year term.

Renewable energy without a PPA and thermal generation surpluses are traded through the Group’s retail company in the free market. In 2023 the impact of price decreases is negligible thanks to the sales already agreed upon and good hydro power prospects for 2023.

e. Mexico

In Mexico, the group is present in the segments of retail supply of electricity to large customers and renewable generation (693 MW in wind farms and 642 MWdc in solar plants) and gas (9,660 MW of combined cycles and 202 MW of cogeneration).

The electricity produced is supplied under three sales models: a) to the CFE through long-term contracts that remunerate the capacity with a fixed payment and cover the variable cost of production (fuel, mainly in thermal power plants), b) to third parties on a self-supply basis and c) on the free market (selling both to third parties and directly on the organised market). Sales to third parties are made either at prices discounted from the official tariff published by the CFE or at prices reflecting production costs of the thermal power plants. Of the Group's total installed capacity in the country, 7,143 MW is dedicated for sale to the CFE under long-term supply agreements.

Commodity price risk

The Group’s thermal generation in México is gas-intensive. Gas prices are therefore an essential component of this risk. In 2023, approximately 85% of the electricity generated in Mexico will be sold under long-term sales agreements (to the CFE and, to a lesser extent, to other major industrial customers and partners), whereby the risk associated with the purchase price of gas used in generating this electricity is passed on.
The remaining energy (both thermal and renewable) is sold to customers, either under self-supply or in the free market, at a price largely linked to the official basic supply tariffs published by the CFE. The Group’s competitiveness in this case consists of obtaining a better price for the supply of gas than the cost used to define the CFE’s basic supply tariff, for which hedging contracts are concluded to stabilise this price. After concluding the bulk of these hedges, in the event of an adverse scenario (high cost of gas relative to other energy commodities), the impact would only amount to EUR 6 million in the 95th percentile.

**Demand risk**

The structure of the agreements IBERDROLA has entered into in Mexico largely shields business results from electricity demand fluctuations. Revenues under contracts with the CFE come mainly from plant availability, and only the sales indexed to the official Mexican tariff are exposed to a certain extent to fluctuations in demand. Furthermore, plants selling electricity on a self-supply basis have no firm sales commitments exceeding their production capacity, and therefore a shift in demand would not have an impact on their operations or results as the electricity generated would be sold to another customer. For this reason, changes in electricity demand in Mexico are not expected to have a material impact on results.

**Regulatory uncertainty in the Mexican electricity market**

Despite the fact that on 17 April 2022 the “Initiative to reform the Constitution” sent by the Mexican executive was voted down in the Chamber of Deputies, the decree to reform and add various provisions of the Electricity Industry Law (Ley de la Industria Eléctrica, LIE), presently suspended with general effects, remains in place. The purpose of this decree is to promote the participation of the CFE, with the definitive impact for the IBERDROLA Group remaining as yet uncertain.

In addition, the Group is having to face an additional risk in Mexico due to the delays in registering customers for the new market scheme. This delay is preventing IBERDROLA from being able to supply these customers, meaning the energy must be sold on the market instead. Should the current delays in granting these registrations drag on, the impact could reach EUR 12 million.

**f. International**

In Germany, the Group owns 51% of and operates the Wikinger offshore wind farm with a capacity of 350 MW. Pursuant to German regulations, the Wikinger plant will have a fixed price for the energy it produces over the first 12 years of operation.

In other countries, the Group currently has an onshore installed capacity of 1,885 MW in wind farms and 348 MWdc in photovoltaic facilities and batteries. In Portugal, Greece, Cyprus, France and Hungary the revenue schemes are regulated, with variations, while in Australia, Romania, Poland and part of Greece PPAs and revenue with market exposure are combined. This exposure is partially mitigated through contracts of varying term with industrial and commercial customers (mainly in Australia), and transactions in the wholesale markets.
The Group has been awarded, and is indeed already building, several significant offshore wind farm projects in Europe, which are expected to be brought into operation throughout 2023-2024:

- Germany: Baltic Eagle (476 MW) project.
- France: Saint Brieuc project (496 MW).

In addition, the Group has a significant portfolio of potential offshore wind projects, having taken stakes in developments in Sweden, Poland, Ireland, Taiwan, Vietnam, the Philippines and Japan, and it has secured the construction and future operation of the 309 MW Windanker wind project in Germany.

IBERDROLA engages in commercial and retail activities in Portugal, Italy, France and Germany, although the scale of this activity is not material at Group level.

4.6 Operational, technological, social, environmental and legal risks

These relate to direct or indirect economic losses caused by external events or inadequate internal processes. The IBERDROLA Group is exposed to the following operational risks, among others:

- technological failures, human error and technological obsolescence;
- operation and construction of facilities;
- supply and the supply chain;
- operational risk of market transactions.
- cybersecurity and information systems.
- the health and safety of people;
- climate change, extreme natural events and pandemics;
- sabotage and/or terrorism;
- regulatory compliance;
- reliability of financial and non-financial information;
- fraud and corruption; and
- litigation, arbitration and tax issues.

Any of these risks could cause damage or destruction to the IBERDROLA Group’s facilities and financial losses, as well as injuries or losses to third parties or damage to the environment, along with the ensuing lawsuits, especially in the event of power outages caused by incidents at our distribution networks, as well as possible penalties imposed by the authorities.

Although many of these factors are unpredictable, the IBERDROLA Group mitigates these risks by carrying out the necessary investments, implementing operation and maintenance procedures and programmes (supported by quality control systems), planning appropriate employee training, and taking out the required insurance covering both material damages and civil liability.
In relation to insurance coverage, the IBERDROLA Group has international insurance programmes to protect assets (insurance for material damage, machinery breakdowns, loss of profits and damage due to natural disasters) and against the liability it may incur as a result of its activities (general civil liability, liability for environmental risks, etc.).

However, this insurance does not completely eliminate operational risk, since it is not always possible, or interesting from the viewpoint of efficiency, to pass such risk entirely on to insurance companies. In addition, coverage is always subject to certain limitations and, sometimes, to excesses.

Given the configuration of the electricity sector’s value chain, the IBERDROLA Group’s activities might be affected by failures in third-party infrastructures and equipment, like transmission networks, competitors’ generation plants, communications networks, etc.

Operational risk of nuclear power plants (Spain)

One of the main operational risks of these plants is unscheduled downtime (partially covered by a loss of profits insurance policy over and above an excess).

It should be noted that nuclear power plants are exposed to specific risks derived from the operation thereof and from the storage and handling of radioactive materials. The entry into force on 1/01/2022 of Law 12/2011 of 27 May on civil liability for nuclear damage or damage caused by radioactive materials sets the liability of nuclear power plant operators in the event of a nuclear accident at EUR 1.2 billion. Such liability carries with it the obligation to provide financial protection in the amount and to the extent specified in the law. The IBERDROLA Group secures this liability by taking out a Nuclear Liability insurance policy for each facility. It was adapted on 1/01/2022 to the new legal requirements.

In 2019, the Government and nuclear generators agreed on a scheduled closure plan for Spanish nuclear plants. The agreement provides guarantees on the recoverability of investments required until the last day of useful life of the plants and allows for rational and safe operation of the plants through to the end of the decade.

4.6.1 Cybersecurity

IBERDROLA Group companies may be affected by threats and vulnerabilities in connection with information, control systems or information and communications systems used by the Group, or by any consequences of unauthorised access to or the use, disclosure, degradation, interruption, modification or destruction of information or information systems, including the consequences of acts of terrorism.

The main risks are:

- Risks related to Operations Technology (OT), such as IT and communications systems used to manage industrial operations (production, management and distribution of energy) or physical safety systems (fire protection, CCTV, alarm reception centres).
– Risks related to administration or customer interfaces (IT), in particular violation of information in them, under the umbrella of the General Data Protection Regulation (GDPR) in Europe and other countries.

– Other cybersecurity risks having an impact on reputation.

The OT Cyber infrastructure of thermal generation and of the large hydroelectric power plants is set up to control and manage the operation of each plant from the Operation Control Centre (Despacho Central de Operaciones, DCO) in Spain and for other own local generation centres. The potential impact of a cyber-attack could put generation and the safety of the whole country’s electrical system at risk.

The operating management of the Group’s Networks Businesses is based on cyber infrastructures used to supervise and monitor physical electricity and gas transmission and distribution networks (with offices located in the Group’s facilities) and the associated field devices. These devices may be located at the IBERDROLA Group’s facilities (substations, transformer centres, etc.) or at customer facilities (meters). The potential impact of a cyber-attack could put at risk the energy supply to whole distribution areas of the Group and/or borderline areas operated by other suppliers.

In the particular case of wind farms (onshore or offshore) and photovoltaic plants, said facilities are connected to Supervision, Control and Data Acquisition systems (“SCADA”) that communicate with Control Centres (CORE), from which said facilities can be monitored and controlled remotely. The global impact of a cyber-attack would affect said remote control capacity, putting operating safety at risk.

These risks are managed in accordance with the basic principles defined in internal rules promoting the safe use of IT and communications systems and other cyber assets, reinforcing detection, prevention, defence and response capabilities regarding possible attacks.

The IBERDROLA Group currently has specific insurance against cyber risks, under the terms allowed by the insurance market, which is revised and updated periodically in view of the rapid evolution and wide variety of cyber risks.

Within the IBERDROLA Group, training, awareness and compliance plans on Cybersecurity and Data Protection are in place for all professionals that include standards, procedures, guidelines and risks depending on the role performed by each professional. Specifically, it is carried out for the owners and managers of critical cyberinfrastructure and for the personnel involved in the protection of cyberinfrastructure.

The Group’s various businesses have appointed specific cybersecurity managers and drawn up plans and processes for their internal networks and cyber infrastructures, aligned with the Group’s global framework but adapted to their specific requirements.
The IBERDROLA Group complies with local rules on critical infrastructure protection in the countries where it operates, which guarantees the highest level of protection against these types of threats. In the case of Spain, the nuclear plant of Cofrentes meets the highest requirements in terms of physical safety and cyber security within the Group. It has its own Cybersecurity Plan, in order to comply with the Spanish Critical Infrastructures Act (Law 8/2011) and the Nuclear Safety Council, as well as its Additional Technical Guidelines, and collaborates in the exchange of information through the Spanish cybersecurity plan.

When it comes to commercial operations, the IBERDROLA Group has implemented a global model to guarantee compliance with all obligations in force in each country. In Europe, the IBERDROLA Group is subject to the GDPR. The Personal Data Protection Policy is implemented at each of the Group's country subholding companies and is developed through local data protection rules and procedures adapted to the legal provisions applicable in each country.

4.6.2 Climate change

Climate change represents a systemic global risk. Companies must do their part to combat this risk through mitigation actions, reducing their emissions and decarbonising their business model, and also by acting against the impacts of climate change, by improving their adaptation and resilience capacities.

Climate change encompasses various risks with growing impacts over the long term, which, to a greater or lesser extent, may be regarded as risks that are not new to the sector. Climate change accelerates risks already listed in the IBERDROLA Group’s risk catalogue (see General Risk Control and Management Policy). In line with the TCFD nomenclature, IBERDROLA classifies climate change risks as follows:

- **Physical risks**, associated with a potential material impact on facilities derived from the effects of climate change (rising temperatures, rising sea level, variations in rainfall, increase in both the frequency and intensity of extreme weather events, etc.). A distinction is made in this category between acute or one-off risks and chronic risks.

- **Transition risks**, linked to all risks that may arise during the gradual global decarbonisation process, such as regulatory changes, market prices, technological and reputational risks, whistleblowing (e.g. for deficient reporting) lawsuits, changes in demand, insurance costs, counterparty credit impairment, and so on.

Climate change risks are identified, analysed and managed through a multi-departmental approach, involving both corporate and business functions. IBERDROLA tackles climate change risks from a favourable position, as it has:

a. Wide-ranging experience in the management of risks accelerated by climate change, both physical and transition.

b. Financial strength

c. A diversified business (from a corporate, geographic and technological standpoint), with reduced exposure to gas assets and no coal-fired power plants.
IBERDROLA has been working for years to implement the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) of the Financial Stability Board.

For more information on metrics and indicators, the Climate Action Plan and climate change risk governance at IBERDROLA, see the “Climate action and TCFD” section of the Statement of Non-Financial Information – Sustainability Report 2022. Note 6 to the consolidated Financial Statements of the Annual Financial Report 2022 provides information on the consideration of this risk in the preparation of the Group’s accounts.

**Transition risks**

The main transition risks, such as regulatory or market risks, usually call for management approaches implemented at country level. Notable transition risks include the potential large-scale development of distributed generation, a drop in wholesale marginal market prices due to a higher renewable production at a reduced variable cost and the evolution of demand.

The Group’s strategic positioning, as a result of its decision to focus its investment on energy obtained from renewable sources and networks, puts it on a good footing to face these risks. The opportunities arising from decarbonisation of the global economy (growth in renewables, investments in inclusive smart grids, electrification of transport, green hydrogen, etc.) are seen as outweighing the risks.

**Physical risks**

The main management and mitigation mechanisms applied are as follows:

- Consideration of climate change in new investment decisions, to make future assets more climate resilient.
- Gradual renewal of the Group’s assets: the fact that the impacts are primarily long-term means that it is largely the Group’s future assets, and not its current ones, that will be more severely impacted.
- Regulatory coverage in the Networks business.
- Diversification of assets (by geography, technology, age, etc.).
- Insurance coverage.
- Many of the physical risks affect normal business variables and, consequently, variables that are already managed, to a greater or lesser extent, through standard operational processes (e.g. equipment redundancy, emergency plans, meshing and making lines underground, smart grids, etc.).

These risks are site-specific, progressive, technology-related and relatively long-term, although, as in the specific case of extreme weather events, the increase in frequency and intensity can already be felt in the short term.

IBERDROLA analyses the resilience of the different areas based on three key concepts in its definition: robustness (based on design and construction procedures), recovery (based on early detection tools and action protocols) and adaptability.

Throughout 2022, IBERDROLA applied its approach for identifying and assessing physical impacts derived from climate change in line with the requirements set out in the European Taxonomy of Sustainable Activities. IBERDROLA has analysed the evolution of the main
climate threats based on regionalised forecasts provided by benchmark climate tools in the various regions in which it operates, under a conservative RCP 8.5 scenario.

In terms of impact, extreme temperature and associated fires, high winds and extreme precipitation, along with water scarcity, are some of the variables with the greatest impact on IBERDROLA's different assets. With a focus on continuous improvement, IBERDROLA continues to make progress in analysing the impact and materiality of the associated risks for the Group as a whole, taking into account the asset base and how it might be affected.

In term of businesses, it is worth noting:

a. Networks business: given the geographical spread of our networks assets in Spain, the United Kingdom, the United States and Brazil, and in accordance with already existing studies, the potential increase in sea level in coastal areas would have no material impact on the regulatory conditions of the Group’s assets. Increases in temperature and greater frequency of extreme climatic events may entail increased technical losses, worse levels of services and an increase in O&M costs (associated with various factors such as a shorter useful life of assets) and annual capital expenditure, albeit in manageable amounts given the multi-year tariff reviews that take place at these regulated businesses.

b. Renewable Generation: the main physical risk associated with each facility is that of potentially negative future developments in hydro, solar and wind resources. Added to the high uncertainty associated with long-term global climate projections for these variables is the need to determine the impact on the geographical regions where our assets are located. There is currently much uncertainty surrounding the long-term outlook of renewable energies, especially solar and wind power.

- In the case of hydro resources, a potential decrease in annual average rainfall could lead to a negative impact on the output of the Group's hydroelectric plants, which is a particular concern when it comes to run-of-river plants, although the negative effects in certain regions could be partially offset against other impacts. Additionally, climate change could affect seasonal rainfall. In Spain, assuming, for example, 5% lower production over an average year of the current generation facilities, a medium-term impact on the margin (discounting pumping) of approximately EUR 27 million is estimated, based on average prices over the next decade and current exchange rates.
- In the case of wind resources, for illustrative purposes, a 1% reduction in the Group's current overall wind power production would result in a lower profit margin of some EUR 28 million, based on average prices over the coming decade and current exchange rates.

The Group’s Investment Policy stipulates the need to carry out a specific analysis of climate change risks in the construction briefs for new assets. Since the network businesses rely on multi-year reviews and future investments in thermal power plants will be very small, the analysis focuses on new onshore wind and photovoltaic facilities. Building on the experience gained, the model will be extended to offshore wind farms in the future.

Based on the impacts discussed (which take into account the current uncertainty associated with climate projections) and the mitigating elements in place, it is estimated that the physical risks of climate change may not have a material and permanent impact on the consolidated figures of the Group, which is believed to be globally resilient.
For more information, see the Statement of Non-Financial Information – Sustainability Report 2022, which provides detailed information according to the TCFD taxonomy on climate change risks (physical and transition), the monitoring and management tools available to the Group, as well as the scenario-based analysis, with three time horizons: up to 2025, up to 2030 and up to 2050.

### 4.6.3 Legal and tax risks

The IBERDROLA Group companies are party to certain in-court and out-of-court disputes within the ordinary course of their activities, the final result of which is generally uncertain. An adverse result or an out-of-court resolution of these or other proceedings in the future could have a material adverse effect on our business, financial situation, operating results and cash flows, and our reputation. As is standard practice, provisions have been made for this purpose, based on the opinion of the Group’s legal advisors.

Notes 35 and 45 to the consolidated Financial Statements include a more detailed description of the most significant open matters.

### 4.6.4 ESG

The Group has policies and procedures to monitor and mitigate other risks to which it is subject, under the supervision of the Board of Directors, with the support of its different Committees and the management of the corporate divisions and businesses.

The comprehensive risk control and management system therefore provides for the continuous monitoring and detection of risks that are not strictly financial in nature which the investor community has been monitoring with growing interest in the last financial years, such as environmental and social aspects, and the Group’s corporate governance (“ESG”). The impact of said risks, which are timely reported both internally and externally, can be of a varied nature, both in economic terms and reputational terms.

While most of the risks with an ESG impact have already been described above, the risks of fraud and corruption are highlighted below. The IBERDROLA Group has a Compliance System consisting of a set of substantive rules, formal procedures and material actions aimed at guaranteeing its conduct in compliance with ethical principles and applicable legal provisions, preventing, avoiding and mitigating the risk of irregular, unethical or illegal behaviour on the part of IBERDROLA Group professionals within the organisation. The bodies and divisions to which the implementation and development thereof has been directly entrusted are also part of said system.

As part of the Compliance System, particularly noteworthy are the Code of Ethics (applicable to all Group professionals, directors and suppliers) and the Compliance Unit, an internal permanent collective body, linked to the Sustainable Development Committee within IBERDROLA’s Board of Directors, which, among other tasks, disseminates a preventive culture based on the principle of zero tolerance for the commission of illegal acts or irregular behaviour. The system has been developed following the best domestic and international practices in the area of compliance, fraud prevention and fight against corruption.
Among the Policies approved by the Board, the following are especially noteworthy:

Environmental, social and corporate governance risks ("ESG")

- Environmental Policy, General Sustainable Development Policy, Climate Change Policy.
- General Corporate Governance Policy, Board of Directors Diversity and Member Selection Policy, and Senior Management Remuneration Policy.

Fraud and corruption risks

- Anti-Corruption and Anti-Fraud Policy.
- Crime Prevention Policy.
- Code of Ethics.
- Ethics Mailboxes.

Reputational risk

- Reputational Risk Framework Policy

For further information on these ESG risks, see the 2022 Sustainability Report, as well as the Integrated Report – February 2023 and the 2022 Annual Corporate Governance Report.

4.7 Other sources of uncertainty

- Merger and acquisition risk

There is a risk that the Group will not identify suitable acquisition opportunities or obtain the necessary funding, and also that transactions will not be profitable. Hidden liabilities and failures in the integration of companies could also come to light.

The friendly AVANGRID-PNM Resources merger, recommended by PNM Resources’ board of directors, was approved by several state and federal agencies during the clearance process throughout 2021, but rejected by the New Mexico Public Regulation Commission. The two companies have filed an appeal against the ruling with the New Mexico Supreme Court, and are confident that they will be able to complete the transaction in 2023. PNM Resources is active in the networks and regulated generation segments.

- Other

The risks associated with pension plans are analysed in Note 27 to these Financial Statements. Note 44 provides a detailed description of contingent liabilities.
4.8 Risks materialised during the year

See section E.5 of the 2022 Corporate Governance Report.

5. SIGNIFICANT EVENTS SUBSEQUENT TO YEAR END

Events subsequent to the close of the financial year are described in Note 50 to the Financial Statements.
6. RESEARCH AND DEVELOPMENT ACTIVITIES

IBERDROLA is today the *Utility of the future* due to its innovative strategy, which is applied across all its business units and areas of activity. Thanks to a constant commitment to innovation, IBERDROLA is the most innovative Spanish utility, the second at European level and the third at worldwide level, in accordance with the European Commission’s classification. This position was reached thanks to the talent, experience and effort of 34,000 people in more than 40 countries.

In 2022, IBERDROLA invested EUR 363 million in R+D+i activities, up 7% from 2021. The IBERDROLA Group’s efforts in R+D+i are based on five pillars fully aligned with the central vectors underpinning the transformation of the energy sector, decarbonisation and electrification of the economy.

- **Disruptive technologies** that are increasingly efficient, sustainable and environmentally-friendly, enabling the operation of facilities and processes to be optimised. Green hydrogen, innovative renewables, sustainable mobility, energy storage, smart grids, electrification of heat and recycling of clean technology components will all contribute to the country’s industrial transformation, with a focus on sustainability, green and affordable energy and jobs.

- **Competitive new products and services** that meet customers’ needs with a greater degree of personalisation of contents and offers.

- **Digitalisation and automation** in all business and processes, introducing new technologies such as blockchain, big data, IoT, virtual reality, artificial intelligence, etc.

- **Innovation with start-ups, entrepreneurs and suppliers** with the goal of developing alliances and new disruptive business models, favouring the exchange of know-how and having a driving effect on collaborators.

- **Culture of innovation and talent.** IBERDROLA fosters a culture of innovation by means of knowledge transfer and by attracting talent and promoting the entrepreneurial spirit. Within the Universities Programme, several initiatives are developed in the academic world, such as lectures, R&D projects, training of students, in-house training and young entrepreneurs. It is a network that promotes training, entrepreneurship and research and connects 490,000 members including students, researchers, professors, etc.

A highlight this year was the inauguration of the IBERDROLA Campus, a global centre for knowledge, innovation and employability that has about 13,000 people receiving training in its classrooms every year. It represents IBERDROLA’s commitment to technology, R&D and collaboration with technology centres as levers to lead the energy transition. The inauguration also occurred of the Global Smart Grids Innovation Hub in Bilbao, with the main aim of promoting and speeding up the development of innovation in smart grids, which will be key to accelerating the energy transition and boosting the development of the related industry.

Some of the innovative initiatives, classified by broad area, are:

---

www.iberdrola.com
6.1 Renewable energies

In 2022, innovation activities at Renewables focused primarily on:

- Efficiency improvements in wind farms, photovoltaic plants and hydroelectric facilities. Big data technologies have been used to obtain weather forecasts for wind or photovoltaic farms, as in the ENERPREDIC project, and to contemplate climate variability, including solar variability, which allows the viewing and processing of information using the CHINOOK tool, as well as data analysis and decision-making in the CARTERAREN project. Work has been carried out on metrics associated with the maintenance and operation of the wind farms in a very graphic and visual way, in addition to the development of new solutions to improve the efficiency of the DOMINA system tools within the REN-EFIC project. Work continued on the ASPA project to develop new models and tools for the early detection of faults based on artificial intelligence/big data techniques; and the AEROEXTENS project focused on understanding the performance of wind turbines in terms of machine control strategies. In the DIAGNOSGRE and GRIDFORMIN projects, digital twin methodologies have been incorporated to verify the operating parameters of a wind farm so as to calibrating the sensitivity and stability of the wind farm, and to analyse the configuration of equipment needed to stabilise the grid.

- In the realm of hydropower, an analysis has been made of the potential to increase pumping capacity at hydroelectric power plants. The analysis addresses the needs for future power, the best location for this increase and the technological improvements that will make it possible, such as variable speed reversible turbines or lower cost penstocks (such as the developments of the project, NEWPUMPING and CONDUCCIONES). In this respect, reference should be made to two projects financed by CDTI, namely HYDROSMART and HYDRODEMAND, which supplement these lines of work.

- With regard to innovation in offshore wind projects, several projects are continuing at the East Anglia One offshore wind farm in the United Kingdom. These include CROWN2, which is studying different types of anti-corrosion solutions and lidar trials that are carrying out a series of studies related to the wind resource. IBERDROLA will build the East Anglia Hub over the coming few years to combine the following three projects with a total installed capacity of 3,100 MW: East Anglia One North, East Anglia Two and East Anglia Three. A novel design has already been initiated for the foundations of the latter farm and studies are continuing for the export of energy using HVDC technology. In the Baltic Sea, a key highlight is the construction of the Baltic Eagle offshore wind farm, where a new design is being produced that is suitable for sea bed conditions and to the size of the new 9.5 MW wind turbines. Last but not least, we have the FLAGSHIP project, an initiative under the H2020 programme for the design, manufacture and operation of a new semi-submerged concrete floating platform and a 10 MW turbine in the Metcentre waters of Norway.

- When it comes to promoting a culture of innovation, the YO SOY INNOVADOR (I INNOVATE) initiatives have continued, with the launch of internal and external challenges and the Renewables Digital Evolution Plan (2018-2022), which seeks ways to standardise, globalise and improve the efficiency of processes in the quest for operational excellence through a global and multidisciplinary team.
6.2 Clean generation technologies

In 2022, efforts in the area of generation focused on digitalisation, operating flexibility and efficiency, reducing the environmental impact and improving plant safety, as follows:

- In nuclear power, the COATI project has continued its work for the development of a software tool that will allow users to draw up specific loading plans for spent fuel assemblies, and which has drawn the interest of potential users like ENRESA. In addition, 3D models are being used to simulate critical processes such as container loading, as well as the use of augmented reality and virtual reality.

- In the realm of thermal generation and industrial heat, further progress has been made on the pioneering REDEMIS project, which has achieved exceptional results in reducing emissions and start-up times of combined cycle power plants. In the digital sphere, highlights include the FLAGSHIP project, which, through the creation of digital twins, makes it possible to simulate operating environments different to those of the plant’s basic design, thus showing us the results of these operations and allowing us to improve in terms of operational flexibility, reliability and efficiency. In addition, work began in 2021 on the SIRO project on technological development based on artificial intelligence, which aims to develop and validate a robotic inspection system for generators. This area encompasses the Industrial Heating and Cooling team, which aims at decarbonising industry through the electrification of production processes.

- The area of energy management is noteworthy for the launch of projects such as Thirties, which seeks to improve voltage control and optimise the use of transmission grids. Also, projects include the likes of Flexener, which is aimed at researching new technologies, simulation models and flexibility services to promote the achievement and operation of a 100% renewable energy mix. It is important to mention the European project Posytjf, which analyses from a theoretical perspective the contribution of renewables to the provision of services to the grid through Virtual Power Plants. The same may said of the BeFlex project, which aims to design an eco-system that can facilitate adequate coordination between all the actors involved in the provision of services to the distributor, with a special focus on the consumer.

6.3 Retail Area – New projects and services

Innovation is essential in the retail activity in order to offer customers the products and services best suited to their needs. Thus, in 2022 IBERDROLA worked on:

- New initiatives to boost customer experience.

Work has also continued on adding new functionalities to the IBERDROLA Customers App. Thus, there has been a simplification of registration processes, process automation, digitisation of the payment process and the option of paying multiple invoices, among others. In addition, the integration of the management of domestic chargers from the Public Charging App and the monitoring of Smart Solar installations in Portugal has been carried out.
New products and functionalities:

In relation to the distributed generation solution for self-consumption, Smart Solar, progress has been made in the internationalisation of the product. It has been launched in the United Kingdom and France, and the first installations are being undertaken in Germany. In addition, the first installations of Solar Communities stand out, where neighbours within 500m of a Solar Community can self-consume energy as a service without the need for installation or investment. They will be able to monitor savings through their App. IBERDROLA has created the Smart Solar Customer Support Management Platform, which will make it easier for customers to access Next Generation Europe funds.

When it comes to Smart Home, it has launched the Smart Business Assistant, which allows customers to optimise their consumption, such as hot and cold air conditioning systems, the consumption monitor, and the smart thermostat and LED lighting.

Creation of Smart Clima to boost decarbonisation of homes through the electrification of heat. In 2021, it is worth highlighting the start-up of pilot aerothermal installations with equipment from leading manufacturers and the development of new energy efficiency certificates in homes, with a high component of intelligence and digitalisation that enable high quality energy diagnostics at minimum cost.

IBERDROLA is also involved in R&D&I projects in the field of electric mobility and has completed the CIRVE project, putting into service the first experiences of interoperability between the main recharging operators in the Spanish market. Meanwhile, IBERDROLA has taken part in the MADRID in MOTION project to tackle the challenges posed by collaborative urban charging and streetlights. IBERDROLA is also involved in the development of prototype battery banks designed to be exchanged for other spent batteries of electric motorbikes in different parts of the city.

6.4 Smart grids

In 2022, i-DE Redes Eléctricas Inteligentes remained focused on various R&D+I initiatives, especially aimed at improving customer service, maintaining and expanding the smart grid model and digitalisation of the grid, and moving towards greater integration of renewable generation, electric vehicles and storage systems across the grid, both in Spain and Europe.

The year 2022 was very important in innovation for i-DE. In alliance with the Provincial Council of Biscay, the Global Smart Grids Innovation Hub was inaugurated. It is one of the company’s strategic projects which, based in Bilbao and targeted at all international markets, will work on developing the electricity grids of the future. This public-private collaboration space - with more than 1,000 m² - was created with the aim of accelerating innovation and R&D in smart grids, which are the cornerstone of the energy transition.
On the European stage, work continued in the ONENET project, which was launched for the development of new customer-centric flexibility tools with an open and flexible architecture based on the concept of an interoperable network of platforms with coordinated operation. Elsewhere, the COORDINET project will continue to coordinate electricity transmission companies, distributors and consumers to provide a framework conducive to the participation of all agents. The ATELIER project was launched with the aim of developing Positive Energy Districts (PEDs) in eight European cities, Bilbao among them. I-DE continues to take part in the ASSURED project to develop fast charging solutions for heavy-duty electric vehicles.

– In Spain, work has continued on four projects to improve the control, monitoring, analysis, prediction and real-time management of low voltage: i-Trafo, eLVIS, CT Inteligente, Gestión técnica de Suministros. The FLEXENER project is also continuing in a satisfactory manner, with the aim of investigating new technologies and simulation models in the field of renewable generation, storage systems and flexible demand management and distribution grid operation. In the realm of grid integration, highlights include the second phase of the Caravaca BESS project, with the FLEXIPOWER project being launched with the aim of integrating several battery energy storage systems, and the DSO – DTR project to assess how much additional energy the grid will carry.

– In the United Kingdom, the DISTRIBUTED ReStart project is looking at how distributed energy resources can be used to restore electricity supply in the event of a total or partial disruption to the national electricity transmission system. The Ofgem-funded HEAT-Up project will develop tests of the impact of domestic heat pump retrofits on electricity networks. The two projects reinforce IBERDROLA’s role as the UK’s leading company in technical and commercial innovation.

– In Brazil, innovation projects are being carried out in various technological realms: smart grids, energy storage, micro-grids, quality charging infrastructure and grid reliability, safety at facilities, energy recoverability and sustainability. Of particular note is the partnership with Iberdrola Innovation Middle East in Qatar to develop new algorithms and analysis metrics to improve quality of service and telecommunications equipment. Particularly significant among the initiatives carried out are the project DSO Atibaia, which contemplates the installation of a new automation system, smart meters and a telecommunications network.

– In the United States, the projects being undertaken with the Yale University and MIT are particular highlights. Studies have been carried out into the network effect on the electricity grid, the usefulness of grid-connected customers, the speed of adoption of new energy technologies and business models, and an analysis of the impact of climate change on electricity distribution networks. Further highlights include our involvement in developing a digital platform designed to accurately account for and standardise global greenhouse gas emissions based on Artificial Intelligence, blockchain and digital twins.

– Iberdrola Innovation Middle East, the IBERDROLA’s technological centre in Qatar, has undertaken several R&D+i projects with a high level of digitalisation and great retail potential in different areas: smart grids, integration of renewable energies and energy management.
6.5 Green hydrogen

IBERDROLA remains committed to the generation of green hydrogen for industrial use. Hence, it has undertaken construction of the largest green hydrogen plant for industrial use in Europe.

The Puertollano (Ciudad Real) plant will feature a 100 MW solar photovoltaic plant, a lithium-ion battery system with a storage capacity of 20 MWh and one of the world’s largest electrolysis hydrogen production systems (20 MW). It will generate 1,200 tonnes of green hydrogen for use in processes of ammonia generation. In addition, related to the decarbonisation of mobility, the first phase of the new Barcelona hydrogen plant, which will supply hydrogen to 24 TMB buses, has come into commercial operation.

6.6 IBERDROLA Ventures – PERSEO

Iberdrola Ventures – PERSEO is IBERDROLA’s start-up programme created in 2008 with a budget of EUR 125 million to foster the development of a dynamic start-up and entrepreneurship ecosystem in the electricity sector. The programme focuses on new technologies and business models that will make the energy model more sustainable through greater electrification and decarbonisation of the economy. Since its inception, more than EUR 85 million have been invested in energy start-ups worldwide. Its base of 34 million consumers and nearly 55 GW of installed capacity allow IBERDROLA to provide start-ups with a large “real laboratory” to nurture their technological and commercial development.

Among the main milestones achieved in 2022, the following stand out:

- **Pilot projects**: Pilot projects: throughout 2022, more than 25 pilot projects were carried out with start-ups in technological areas such as IoT, robotics and batteries, in areas such as grid construction and maintenance, hybridisation of land use (agrovoltaic), electric mobility, and energy efficiency. The aim is to improve the construction and management of assets, optimise operation and maintenance or improve the services offered to our customers.

- **Challenges**: In 2022 IBERDROLA launched nine challenges for the start-up community in fields such as renewable generation, both onshore and photovoltaic generation, electric mobility, or the construction and maintenance of electricity grids.

- **Investment**: Investment: highlights here include the IPO (NYSE) of two of Perseo’s investee companies, Wallbox Chargers S.L., which is dedicated to the development of electric mobility solutions, and Stem Inc., which is dedicated to the management of distributed energy assets (batteries). In addition, three new investments have been made through the programme in the areas of energy efficiency, mobility and decarbonisation, thus reaffirming IBERDROLA’s commitment to electric mobility, efficiency and decarbonisation of society.
• “Venture Builder”: Perseo has continued the initiative launched in 2021 to invest in and build electrification and the circular economy – in areas such as recycling of photovoltaic modules, blades and batteries – and in hard-to-decarbonise sectors such as industrial heat production and heavy transport. Through this initiative, support was provided to the Net-Zero MAR Alliance, which is focused on decarbonising the maritime sector.

Further information on the R&D+i projects in which IBERDROLA is involved can be found under the Innovation section of the corporate website.

7. ACQUISITION AND DISPOSAL OF TREASURY SHARES

The Group’s Treasury Share Policy establishes the following:

Treasury share transactions are considered those transactions carried out by the Company, whether directly or through any of the Group’s companies, the object of which are Company shares, as well as financial instruments or contracts of any type, whether or not traded in the stock market or other organised secondary markets, which grant the right to acquire, or the underlying assets of which are, Company shares.

Treasury share transactions will always have legitimate purposes, such as, among others, to provide investors with liquidity and sufficient depth in the trading of Company shares, to execute treasury share purchase programmes approved by the Board of Directors or General Shareholders’ Meeting resolutions, to fulfil legitimate commitments undertaken in advance or any other acceptable purposes in accordance with applicable regulations. Under no circumstances shall the purpose of treasury share transactions be to interfere with the free establishment of prices. In particular, any conduct referred to in Section 83 ter 1) of the Securities Market Act and Section 2 of Royal Decree 1333/2005 of 11 November, implementing the Securities Market Law as to matters of market abuse, must be avoided.

The Group’s treasury share transactions will not be carried out, under any circumstances, based on inside information.

Treasury shares will be managed providing full transparency as regards relationships with market supervisors and regulatory bodies.
Note 21 to the consolidated Financial Statements presents the transactions in IBERDROLA treasury shares held by Group companies in the last financial years. Further information on transactions in financial years 2022 and 2021 is provided in the following tables:

In 2022 and 2021, treasury shares held by the IBERDROLA Group were always below the relevant legal limits.

Finally, the conditions and time periods of the current mandate given by the shareholders to the Board of Directors to acquire or transfer treasury shares are detailed below.
At the General Shareholders’ Meeting held on 17 June 2022, the shareholders resolved to expressly authorise the Board of Directors, with powers of substitution, pursuant to the provisions of Section 146 of the Spanish Companies Act, to carry out the derivative acquisition of shares of IBERDROLA, S.A. under the following conditions (coinciding with those of the authorisation that was in force from 13 April 2018 until that date):

- Acquisitions may be made directly by the Company or indirectly through its subsidiaries, except for those subsidiaries which carry out regulated activities pursuant to the provisions of the Electricity Sector Act and the Hydrocarbon Sector Act.
- Acquisitions may be made by means of purchase and sale transactions, swaps or any other transaction permitted by law.
- Acquisitions may be made up to the maximum threshold allowed by law (10% of the share capital).
- Such acquisitions may not be made at a price higher than the market price or lower than the par value of the shares.
- This authorisation was granted for a period of five years as from the approval of the resolution.
- As a result of the acquisition of shares, including those which the Company or the person acting in their own name but on behalf of the Company has previously acquired and held in treasury, the resulting shareholders’ equity cannot decrease below the amount of the share capital plus the restricted reserves required under law or the by-laws.

The shares acquired under the aforementioned authorisation can be transferred or retired or used for the remuneration systems provided for in the Spanish Companies Act. They may also be used to develop programmes that encourage the acquisition of interests in the Company’s share capital, such as dividend reinvestment plans, loyalty bonuses and other similar instruments.

8. OTHER INFORMATION

Compliance with Section 262.1 of the Spanish Companies Act with respect to the average supplier payment period

As detailed in Note 36, the Company’s average payment period to its suppliers in 2022 was 13 days.

General framework of cover for legal defence and liability risks

During the year, the Company’s Board of Directors approved a broad harmonised framework of coverage for legal defence risks and liability claims in the performance of their duties for directors, including liquidators, members of the management bodies and professionals (employees and executives) of the IBERDROLA Group companies, taking into account the singularities of their respective Governance and Sustainability systems and the specific regulations applicable to them. This resolution was passed at the proposal of the Appointments Committee and taking into consideration the report issued by an external advisor which concludes that it is in accordance with the law.

The aim is to provide them, within legal limits, with appropriate and proportionate support vis-à-vis the risks of legal defence (which extends to proceedings or claims brought by third parties until there is a final court or administrative decision and includes, inter alia, legal defence costs, posting of bonds and direct personal expenses arising from the defence) and the liability risks arising from the legitimate discharge of their duties, provided that their actions, governed by principles of good faith, are in keeping with the law and the applicable Governance and Sustainability System.

The aforementioned coverage framework provides for a system of supervision as to its application, whereby the relevant management body may, in the company's interest and in the light of the circumstances, waive the coverage commitment in certain cases, as well as modulate the scope and form of the reimbursement right in the event of a final resolution.

The Company also adopted a supplementary coverage commitment in favour of its directors, executives and professionals, as well as the proprietary directors of the listed country subholding companies appointed by the Company.

Alternative performance measures

In addition to the financial information prepared in accordance with IFRS, the financial information contained in this report includes certain Alternative Performance Measures (“APMs”) for the purposes of Commission Delegated Regulation (EU) 2019/979 of 14 March 2019 and as defined in the Guidelines on Alternative Performance Measures published by the European Securities and Markets Authority on 5 October 2015 (ESMA/2015/1415en). APMs are measures of financial performance based on the financial information of Iberdrola, S.A. and the companies of its group but which are not defined or detailed in the applicable financial reporting framework. These APMs are used to contribute to a better understanding of Iberdrola, S.A.’s financial performance, but should be viewed as additional information only and in no case do they replace the financial information prepared in accordance with IFRS. Furthermore, the way in which Iberdrola, S.A. defines and calculates these APMs may differ from how other entities apply similar measures and, therefore, they may not be directly comparable. For more information on these topics, including their definition or the correlation between the corresponding performance indicators and the consolidated financial information reported in accordance with IFRS, please refer to the information available on the corporate website. (Alternative performance measures (iberdrola.com)).
9. NON-FINANCIAL INFORMATION AND DIVERSITY

The statement of non-financial information, referred to in Section 262 of the Spanish Companies Act and Section 49 of the Code of Commerce, is presented in a separate report called Statement of Non-financial Information. The consolidated Sustainability Report of Iberdrola, S.A. and its subsidiaries for financial year 2022 expressly indicates that the information contained therein is part of this consolidated Management Report. Said document will be verified by an independent assurance provider and is subject to the same requirements in terms of approval, deposit and publication as this consolidated Management Report.
The disclosures contained in this section of the Management Report are the same as the disclosures in the Annual Corporate Governance Report sent separately to the Spanish National Securities Market Commission for publication at www.cnmv.es.

Pursuant to the provisions of Section 23.1 of Royal Decree 1362/2007 of 19 October, further developing Law 24/1988 of 28 July on the Securities Market, in connection with the transparency requirements relating to the information on issuers whose securities have been admitted to trading on an official secondary market or other regulated market in the European Union, it is deemed that the holder of a significant interest is a shareholder holding at least 3% of voting rights or 1% if the party required to report resides in a tax haven or in a country or territory with no taxation or with which there is no effective exchange of tax information.

The information provided regarding significant interests is based on the reports sent by the holders thereof to the National Securities Market Commission (Comisión Nacional del Mercado de Valores) (“CNMV”) and/or to the

www.iberdrola.com
Company itself. Specifically, the percentages of BlackRock, Inc. have been calculated taking into account the voting rights reported in its latest notice to the CNMV and the total number of voting rights of Iberdrola as at the end of financial year 2022.

According to available information, the approximate breakdown of the interests in the share capital by type of shareholder at year-end 2022 is as follows:

- International investors 71.01%
- Domestic entities 6.76%
- Domestic retail investors 22.23%

Total percentage of voting rights held by the Board of Directors 0.25
The shareholders acting at the General Shareholders’ Meeting held on 2 April 2020 approved a long-term variable remuneration programme focused on the sustainable creation of value for shareholders and directed at the executive directors, management personnel and other professionals of Iberdrola and of other companies of the group in order to incentivise the achievement of the key strategic goals provided for the 2020-2022 period (the “2020-2022 Strategic Bonus”). For this purpose, the 2020-2022 Strategic Bonus is configured as an incentive to be paid through the delivery of a number of shares of the Company to be determined based on Iberdrola’s performance with respect to certain financial, business and sustainable development parameters, which present a challenging scenario for a company that continues to have profitable growth and is financially strong and committed to the Sustainable Development Goals (SDGs) approved by the United Nations. Pursuant thereto, the executive chairman may receive up to a maximum of 1,900,000 shares, and the chief executive officer up to a maximum of 240,000 shares, which, if appropriate, would be paid on a fractional and deferred basis, in three equal parts, in 2023, 2024 and 2025. The maximum amount of shares that the chief executive officer can receive was allocated thereto, when he was a member of Senior Management, and has not been changed due to his appointment as chief executive officer on 25 October 2022. The number of shares to be delivered to each beneficiary will depend on the evaluation of the Company’s performance and the level of achievement of said objectives (i.e. the weighted coefficient of achievement of the objectives), and the annual accrual and corresponding payment will be subject to confirmation by the Board of Directors, after a report from the Remuneration Committee, that the circumstances on which such evaluation was based remain in effect.

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

List the total percentage of voting rights represented on the board:

| Total percentage of voting rights held by the Board of Directors | 0.25 |

A.4. If applicable, indicate any family, commercial, contractual or corporate relationships that exist among significant shareholders to the extent that they are known to the company, unless they are insignificant or arise in the ordinary course of business, with the exception of those reported in section A.6:

<table>
<thead>
<tr>
<th>Name or company name of related party</th>
<th>Nature of relationship</th>
<th>Brief description</th>
</tr>
</thead>
<tbody>
<tr>
<td>No data</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
A.5. If applicable, indicate any commercial, contractual or corporate relationships that exist between significant shareholders and the company and/or its group, unless they are insignificant or arise in the ordinary course of business:

<table>
<thead>
<tr>
<th>Name or company name of related party</th>
<th>Nature of relationship</th>
<th>Brief description</th>
</tr>
</thead>
<tbody>
<tr>
<td>No data</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

A.6. Unless insignificant for both parties, describe the relationships that exist between significant shareholders, shareholders represented on the Board and directors or their representatives in the case of directors that are legal persons.

Explain, if applicable, how the significant shareholders are represented. Specifically, indicate those directors appointed to represent significant shareholders, those whose appointment was proposed by significant shareholders, or who are linked to significant shareholders and/or companies in their group, specifying the nature of such relationships or ties. In particular, mention the existence, identity and post of any directors of the listed company, or their representatives, who are in turn members or representatives of members of the Board of Directors of companies that hold significant shareholdings in the listed company or in group companies of these significant shareholders:

<table>
<thead>
<tr>
<th>Name or company name of related director or representative</th>
<th>Name or company name of related significant shareholder</th>
<th>Company name of the group company of the significant shareholder</th>
<th>Description of relationship / post</th>
</tr>
</thead>
<tbody>
<tr>
<td>No data</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

There are no directors connected to significant shareholders and, specifically, none of the directors has been appointed on behalf of, nor has their appointment been proposed by, said shareholders.

A.7. Indicate whether the company has been notified of any shareholders’ agreements that may affect it, in accordance with the provisions of Sections 530 and 531 of the Spanish Companies Act (Ley de Sociedades de Capital). If so, describe them briefly and list the shareholders bound by the agreement:

[ ] Yes [ X ] No

Indicate whether the company is aware of any concerted actions among its shareholders. If so, provide a brief description:

[ ] Yes [ X ] No

If any of the aforementioned agreements or concerted actions have been amended or terminated during the year, indicate this expressly:
A.8. Indicate whether any individual or company exercises or may exercise control over the company in accordance with Article 5 of the Securities Market Act. If so, identify them:

[ ] Yes  [X] No

A.9. Complete the following table with details of the company's treasury shares:

At the close of the year:

<table>
<thead>
<tr>
<th>Number of direct shares</th>
<th>Number of indirect shares (*)</th>
<th>Total percentage of share capital</th>
</tr>
</thead>
<tbody>
<tr>
<td>64,447,436</td>
<td></td>
<td>1.01</td>
</tr>
</tbody>
</table>

(*) Through:

<table>
<thead>
<tr>
<th>Name or company name of direct shareholder</th>
<th>Number of direct shares</th>
</tr>
</thead>
<tbody>
<tr>
<td>No data</td>
<td></td>
</tr>
</tbody>
</table>

Explain any significant changes during the year:

During financial year 2022, the Company sent to the CNMV three updates to its treasury share position as a result of a change in the number of voting rights arising from corporate transactions:

- On 4 February notices were provided of direct acquisitions of a total of 3,086,535 shares (0.048%), coinciding with the increase in share capital resulting from the “Iberdrola Retribución Flexible” programme.

- On 8 July notices were provided of direct acquisitions of a total of 48,136,011 shares (0.771%), coinciding with the reduction in share capital carried out; and

- On 2 August notices were provided of direct acquisitions of a total of 202,776 shares (0.003%), coinciding with the increase in share capital resulting from the “Iberdrola Retribución Flexible” programme.

During financial year 2022 the Company also provided one more notice arising from consecutive direct acquisitions of own shares due to said acquisitions exceeding 1% of voting rights since the preceding notice:

- On 11 May notice was provided of direct acquisitions of a total of 72,976,843 shares (1.134%).

A.10. Provide a detailed description of the conditions and terms of the authority given to the Board of Directors to issue, repurchase, or dispose of treasury shares:

AUTHORISATIONS TO ISSUE NEW SHARES

At the General Shareholders’ Meeting held on 2 April 2020, the shareholders resolved to authorise the Board of Directors to increase share capital upon the terms and within the limits set forth in Section 297.1.b) of the Companies Act (Ley de Sociedades de Capital) and to issue debentures exchangeable for and/or convertible into shares and warrants in an amount of up to €5,000 million.

Both authorisations were granted for a term of five years and include the power to exclude preemptive rights up to an overall maximum nominal amount of 10% of the share capital. Neither of them has been used, either in whole or in part, through the date of approval of this report.
Furthermore, the shareholders acting at the General Shareholders’ Meeting held on 17 June 2022 approved the two customary increases in share capital by means of a scrip issue to implement the “Iberdrola Retribución Flexible” optional dividend system through the issuance of new bonus shares, together with the corresponding reduction in share capital by means of the retirement of own shares in order for the number of outstanding shares to remain at around 6,240 million. Both the increases and the reduction in share capital have been implemented as of the date of approval of this report.

AUTHORIZATION TO ACQUIRE OWN SHARES

The shareholders acting at the General Shareholders’ Meeting held on 17 June 2022 resolved to authorise the Board of Directors to carry out the derivative acquisition of shares of Iberdrola on the following terms (which are the same terms as those of the authorisation that was in effect from 13 April 2018 through the aforementioned date):

- Purchases may be made by Iberdrola directly, or indirectly through its subsidiaries, excluding those that carry out regulated activities pursuant to the provisions of the Electricity Industry Act (Ley del Sector Eléctrico) and the Hydrocarbons Act (Ley de Hidrocarburos).
- Purchases will be made using purchase/sale or swap transactions or any other means allowed by law.
- Purchases may be made up to the maximum sum permitted by law (i.e. 10% of the share capital).
- Purchases may not be made at a higher price than that quoted on the Stock Exchange or at a price lower than the share’s nominal value.
- The authorisation was granted for a period not to exceed five years as from the approval of the resolution.
- As a result of the acquisition of shares, including those that the Company or the person acting in their own name but on behalf of the Company has previously acquired and holds in treasury, the resulting shareholders’ equity cannot decrease to below the amount of the share capital plus the restricted reserves required under law or the By-Laws.

The shares purchased as a result of the aforementioned authorisation can be used for either transfer or retirement or can be applied to the remuneration systems provided for in the Companies Act, as well as to the development of programmes fostering the acquisition of interests in the Company, such as dividend reinvestment plans, loyalty bonuses or similar instruments.

A.11. Estimated float:

<table>
<thead>
<tr>
<th>Estimated float</th>
<th>%</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>81.00%</td>
</tr>
</tbody>
</table>

A.12. Indicate whether there are any restrictions (articles of incorporation, legislative or of any other nature) placed on the transfer of shares and/or any restrictions on voting rights. In particular, indicate the existence of any type of restriction that may inhibit a takeover of the company through acquisition of its shares on the market, as well as such regimes for prior authorisation or notification that may be applicable, under sector regulations, to acquisitions or transfers of the company’s financial instruments.

[X] Yes   [ ] No

Description of restrictions

ACQUISITION OF SHARES
Prior government approval is required for the acquisition of a stake equal to or greater than 10% of the share capital of listed Spanish companies in the energy infrastructure and energy supply sectors, among others (Section 7 bis of Law 19/2003 of 4 July, introduced by Royal Decree-law 8/2020 of 17 March, and sole transitional provision of Royal Decree-law 34/2020 of 17 November).

Moreover, due to the activities carried out by the companies of the Iberdrola group in the United States of America, the acquisition of a stake resulting in ownership of an interest equal to or greater than 10% of the share capital of Iberdrola will be subject to prior approval by certain U.S. regulatory authorities, pursuant to the laws in effect in that country.

In addition, as a consequence of the activities of the companies of the Iberdrola group in Australia, the acquisition of an interest of at least 20% of the share capital of Iberdrola by a person, whether alone or with one or more associates, requires approval by the Australian Treasurer, pursuant to Australia’s Foreign Acquisitions and Takeovers Act 1975 (Cth) (“FATA”). The Australian Treasurer has powers under the FATA in certain circumstances to block an investment or request a divestment if a person, whether alone or with one or more associates, has not obtained prior approval and acquires an interest in Iberdrola consisting of: (i) at least 10% of the share capital; (ii) at least 5% of the share capital if the purchaser enters into a legal arrangement relating to its business and Iberdrola; or (iii) any percentage of the share capital if the person, whether alone or with one or more associates, is in a position to influence or participate in the Company’s central management and control.

Furthermore, a takeover of Iberdrola would entail the indirect acquisition of control of “Neoenergia S.A.”, a listed company in Brazil, which would give rise to the obligation to make a transfer of control takeover bid for the acquisition of the shares of the other shareholders of “Neoenergia S.A.”, and would require the prior approval of the National Electricity Agency and, if applicable, of the Administrative Council for Economic Defence, all in accordance with Brazilian law.

VOTING RIGHTS

Pursuant to the provisions of Section 34 of Royal Decree-Law 6/2000 of 23 June on Urgent Measures to Intensify Competition in the Goods and Services Market, those having an interest equal to or greater than 3% of the capital or voting rights of two or more companies that have the status of principal operator in certain markets or sectors (including the generation and supply of electricity) may not exercise rights in excess of such percentage in more than one company.

Furthermore, Article 29.2 of the By-Laws provides that no shareholder may cast a number of votes greater than those corresponding to shares representing 10% of the share capital. In the case of a takeover bid, this restriction shall be deprived of effect upon the occurrence of the circumstances provided for in Section 527 of the Companies Act and Article 50 of the By-Laws.

A.13. Indicate whether the general shareholders’ meeting has resolved to adopt measures to neutralise a takeover bid by virtue of the provisions of Law 6/2007.

[ ] Yes [ X ] No

If so, explain the measures approved and the terms under which such limitations would cease to apply:

A.14. Indicate whether the company has issued shares that are not traded on a regulated EU market.

[ ] Yes [ X ] No

If so, indicate each share class and the rights and obligations conferred:
B GENERAL SHAREHOLDERS’ MEETING

B.1. Indicate whether there are any differences between the minimum quorum regime established by the Spanish Corporate Enterprises Act for General Shareholders’ Meetings and the quorum set by the company, and if so give details:

[X] Yes [ ] No

<table>
<thead>
<tr>
<th>Description of differences</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quorum required at 1st call</td>
</tr>
<tr>
<td>Quorum required at 2nd call</td>
</tr>
</tbody>
</table>

Article 21.2 of the By-Laws increases the quorum required to hold a valid meeting “in order to adopt resolutions regarding a change in the object of the Company, transformation, total split-off, dissolution of the Company, and the amendment of this section 2”, in which case “shareholders representing two-thirds of subscribed share capital with voting rights must be in attendance at the first call to the General Shareholders’ Meeting, and shareholders representing sixty per cent of such share capital must be in attendance at the second call”.

B.2. Indicate whether there are any differences between the company’s manner of adopting corporate resolutions and the regime provided in the Spanish Corporate Enterprises Act and, if so, give details:

[X] Yes [ ] No

<table>
<thead>
<tr>
<th>Description of differences</th>
</tr>
</thead>
<tbody>
<tr>
<td>Qualified majority different from that established in Article 201.2 of the Spanish Corporate Enterprises Act for matters referred to by Article 194.1 of said Act</td>
</tr>
<tr>
<td>Other matters requiring a qualified majority</td>
</tr>
</tbody>
</table>

Article 52 of the By-Laws provides that all resolutions intended to eliminate or amend the provisions contained in Title IV (breakthrough of restrictions in the event of takeover bids), in Article 28 (conflicts of interest), and in sections 2 to 4 of Article 29 (limitation upon the maximum number of votes that a shareholder may cast) shall require the affirmative vote of three-fourths (3/4) of the share capital present in person or by proxy at a General Shareholders’ Meeting.

B.3. Indicate the rules for amending the company’s articles of incorporation. In particular, indicate the majorities required for amendment of the articles of incorporation and any provisions in place to protect shareholders’ rights in the event of amendments to the articles of incorporation.
In addition to the provisions of Section 285 et seq. of the Companies Act that apply to the Company, Articles 21.2 and 52 of Iberdrola’s By-Laws (mentioned in sections B.1 and B.2 above) require a qualified quorum and qualified majority, respectively, for the approval of certain resolutions.

B.4. Give details of attendance at General Shareholders’ Meetings held during the reporting year and the two previous years:

<table>
<thead>
<tr>
<th>Date of general meeting</th>
<th>% physical presence</th>
<th>% present by proxy</th>
<th>% distance voting</th>

</tr>
</tbody>
</table>

In 2022 the General Shareholders’ Meeting was held on site with the ability to attend remotely, while the 2020 and 2021 meetings were held exclusively by remote means.

B.5. Indicate whether any point on the agenda of the General Shareholders’ Meetings during the year was not approved by the shareholders for any reason:

[ ] Yes  [X] No

B.6. Indicate whether the articles of incorporation contain any restrictions requiring a minimum number of shares to attend General Shareholders’ Meetings, or to vote remotely:

[ ] Yes  [X] No

B.7. Indicate whether it has been established that certain decisions, other than those established by law, entailing an acquisition, disposal or contribution to another company of essential assets or other similar corporate transactions must be submitted for approval to the General Shareholders’ Meeting:

[ ] Yes  [X] No

B.8. Indicate the address and manner of accessing the company’s website, information on corporate governance and other information regarding General Shareholders’ Meetings that must be made available to shareholders through the company website.

Address of the website with information on corporate governance:
https://www.iberdrola.com/corporate-governance

**OTHER CURRENT POSITIONS AND PROFESSIONAL ACTIVITIES:**

Chairman of the boards of directors of the Iberdrola group’s country subholding companies in the United Kingdom (Scottish Power Ltd.), the United States of America (Avangrid, Inc., a NYSE-listed company) and Brazil (Neoen energia, S.A., a company listed on the BOVESPA).

Chairman of the Renewable Hydrogen Coalition and a member of the group of top utility executives of the World Economic Forum (Davos), as well as a member of the European Round Table for Industry (ERT) and of the J.P. Morgan International Council.

Trustee of Fundación Princesa de Asturias, Fundación Carolina, Fundación Conocimiento y Desarrollo, Real Instituto Elcano and Real Patronato del Museo Nacional del Prado.

**ACADEMIC TRAINING:**

Industrial engineer with a degree from the Escuela Superior de Ingeniería (ICAI) of Universidad Pontificia Comillas (Madrid) and degrees in Business Administration and Foreign Trade from ICADE (Madrid) and in General Corporate Management and Foreign Trade from Escuela de Organización Industrial (EOI) in Madrid.

A recipient of honorary doctorate degrees from the universities of Salamanca, Edinburgh and Strathclyde (Glasgow), he has been on the faculty of Escuela Técnica Superior de Ingeniería (ICAI) and is currently a visiting professor at the University of Strathclyde, chairman of the Social Council of Universidad de Salamanca, a trustee of the Comillas-ICAI University Foundation and a member of the Presidential Advisory Council of the Massachusetts Institute of Technology (MIT).

**NOTEWORTHY EXPERIENCE IN THE ENERGY AND INDUSTRIAL ENGINEERING SECTOR:**

He has served as chief operating officer of Industria de Turbo Propulsores, S.A. (ITP) and as chairman of the European aerospace consortium Eurojet (Germany). He has held various positions at Sociedad Española del Acumulador Tudor, S.A. (now, Exide Group), engaged in the manufacture and sale of batteries.

**NOTEWORTHY EXPERIENCE IN OTHER INDUSTRIES:**

In the telecommunications industry, he has been chief executive officer of Airtel Móvil, S.A. (now, Vodafone España, S.A.U.), and in the food industry, a member of the Supervisory Board of Nutreco Holding N.V., a listed company in The Netherlands, and a founding member and director of the Matarromera group (Spain).

**SOME RECOGNITIONS:**

- Management Leadership Award (Spanish Association for Quality) and Business Career Award (El Economista) in 2020.
- Recognised as one of the five Best-Performing CEOs in the World and the top in the utilities sector (Harvard Business Review), and as one of the 30 most influential leaders in the fight against climate change (Bloomberg) in 2019.
- National Innovation and Design Award in the Innovative Career category (Spanish Ministry of Science, Innovation and Universities), Honourable Mention for his professional career (Official Industrial Engineers Association), and designation as Universal Spaniard (Fundación Independiente) in 2019.
- Honorary Member of the Spanish Institute of Engineering (2018).
- Best European Utility Top Executive Award (Institutional Investor Research Group), for the eleventh time, in 2017.
- Appointed by Queen Elizabeth II as a Commander of the Most Excellent Order of the British Empire and recipient of the international Responsible Capitalism Award (First Group) in 2014.
- Best CEO of European utilities and of Spanish listed companies in investor relations (Thomson Extel Survey) in 2011.
- Business Leader of the Year Award (Spain-U.S. Chamber of Commerce) and recipient of the International Award for Economics (Fundación Cristóbal Gabarrón) in 2008.
- Best CEO of the Year (Platts Global Energy Awards) in 2006.
| MR ARMANDO MARTÍNEZ MARTÍNEZ | Chief executive officer | Miranda de Ebro, Spain, 1968. |
| ACADEMIC TRAINING: |
| Degree in industrial engineering (with a major in electricity) from Universidad de Valladolid (Spain) and a diploma in Company Management from Instituto Panamericano de Alta Dirección de Empresa, IPADE Business School. |
| NOTEWORTHY EXPERIENCE IN THE ENERGY AND INDUSTRIAL ENGINEERING SECTOR: |
| He has spent most of his professional career at the Iberdrola group and has more than 25 years’ experience in the energy industry. In 1997 he joined Iberdrola as director of the Santurce (Biscay) thermal power plant. From 2000 to 2014 he worked at “Iberdrola México, S.A. de C.V.”, first as director of Generation, and from 2011 onwards, as general director of that Mexican company. In July 2014 he was appointed as general director of the Global Liberalised Business. From February 2016 to October 2021, he held the position of director of the Networks Business. In October 2021 he was appointed as Business CEO, effective from 1 November 2021, with overall responsibility for all businesses at the global level. |

| MR JUAN MANUEL GONZÁLEZ SERNA GONZÁLEZ SERNA | Madrid, Spain, 1955.  
OTHER CURRENT POSITIONS AND PROFESSIONAL ACTIVITIES:  
ACADEMIC TRAINING:  
He has a degree in Law, Economics and Business Studies from the Instituto Católico de Administración y Dirección de Empresas (ICADE) of the Universidad Pontificia Comillas (Madrid) and a Master’s in Business Administration (MBA) from the Escuela de Dirección del Instituto de Estudios Superiores de la Empresa (IESE Business School) of the University of Navarra in Barcelona.  
NOTEWORTHY EXPERIENCE IN THE ENERGY AND INDUSTRIAL ENGINEERING SECTOR:  
He has been an independent director of the Iberdrola group's country subholding company in Spain, “Iberdrola España, S.A.” (Sociedad Unipersonal), and of “Iberdrola Renovables, S.A.”, as well as chair of the Appointments and Remuneration Committee of the latter company.  
NOTEWORTHY EXPERIENCE IN OTHER INDUSTRIES:  
He has been a member of the advisory board of Rabobank in Spain and Europe, as well as a director of “Banco Urquijo Sabadell Banca Privada, S.A.” and of “Sociedad para el Desarrollo Industrial de Castilla y León, Sociedad de Capital Riesgo, S.A.” (SODICAL, now “Ade Capital Social, Sociedad de Capital Riesgo de Régimen Común, S.A.”).  
He is a founding trustee and chairman of Fundación GSU Found, an honorary member of the General Assembly of the Spanish Paralympics Committee, a trustee of the Fundación Casa Ducal de Medinaceli, and honorary president of Empresa Familiar de Castilla y León.  
In 1991, together with his spouse, Lucía Urbán, he founded Grupo SIRO, now Cerealto Siro Foods, of which he was chairman for 31 years. |
Other current positions and professional activities:  
Managing Partner of Brookfield Partners Private Equity Group, senior adviser of Brunswick Group, LLP and a member of the advisory boards of the Centre for European Reform, the German Marshall Fund and the European Policy Centre.  
Academic training:  
He studied Government at Harvard University and International Relations at the University of Oxford.  
He holds a Juris Doctor degree from Columbia Law School and a Masters in Finance from London Business School.  
Noteworthy experience in the energy and industrial engineering sector:  
He has been a member of the Sustainable Development Committee of Iberdrola. He has also been an independent director of the Iberdrola group’s country subholding company in the United Kingdom, “Scottish Power, Ltd.”, and a member of that company’s Audit and Compliance Committee.  
Noteworthy experience in other industries:  
He was the US ambassador to the European Union from 2014 to 2017. Prior to that appointment, for six years he was the managing director at Palamon Capital Partners, a private equity firm based in London. He was also the director of one of the finance departments of Bank of America and of GE Capital, as well as director in the international acquisitions group of GE International. He has worked as an attorney at international law firms in London, Paris, New York and Brussels. He has dedicated more than twenty years of his career to US-European affairs, as a government official, lawyer and investor. As Director for European Affairs on the National Security Council (1994-1995), he worked closely with the US Mission to the European Union to launch the New Transatlantic Agenda. He previously worked with the Treuhandanstalt (German Privatisation Ministry) in Berlin, the Stock Exchange Operations Committee in Paris and as secondee for the European Commission in Brussels. He was also an adviser of the law firm “Sidley Austin LLP” and of the Bill & Melinda Gates Foundation. |
| MR MANUEL MOREU MUNAIZ | Pontevedra, Spain, 1953.  
Other current positions and professional activities:  
President of “Seaplace, S.L.”, sole director of “H.I. de Iberia Ingeniería y Proyectos, S.L.” and of “Howard Ingeniería y Desarrollo, S.L.”, a director of “Tubacex, S.A.” and a member of the Spanish Committee of Lloyd's Register EMEA, and also a professor of the Master’s Programme in Oil at Universidad Politécnica de Madrid (ETSIM), and of the Maritime Master's Programme of Instituto Marítimo Español and of Universidad Pontificia Comillas.  
Academic training:  
Doctorate in naval engineering from Escuela Técnica Superior de Ingenieros Navales (ETSIN) of the Universidad Politécnica de Madrid, and Master's degree in Oceanic Engineering from the Massachusetts Institute of Technology (MIT).  
Noteworthy experience in the energy and industrial engineering sector:  
He has been a member of the Sustainable Development Committee of Iberdrola, of the Board of Directors of “Iberdrola Renovables, S.A.” and a director and member of the Audit and Compliance Committee of “Gamesa Corporación Tecnológica, S.A.” (now “Siemens Gamesa Renewable Energy, S.A.”).  
Noteworthy experience in other industries:  
He has been a member of the board of “Metalships and Docks, S.A.”, “Neumáticas de Vigo, S.A.” and “Rodman Polyships, S.A.”, dean of the Colegio Oficial de Ingenieros Navales y Oceánicos de Madrid y de España, president of the Spanish Institute of Engineering, and a professor of the Escuela Técnica Superior de Ingenieros Navales of the Universidad Politécnica de Madrid and for the Repsol's Master's Programme in Oil. |

**MS SARA DE LA RICA GOIRICELAYA**

Bilbao, Spain, 1963.

**OTHER CURRENT POSITIONS AND PROFESSIONAL ACTIVITIES:**

Director of Fundación ISEAK (Initiative for Socio-economic Analysis and Knowledge), a member of the Think Tank of AMETIC (Asociación Multisectorial de Empresas de la Electrónica, las Tecnologías de la Información y la Comunicación, de las Telecomunicaciones y de los Contenidos Digitales), an honorary member of the Spanish Economics Association (Asociación Española de Economía), an associate researcher at CreAM (Centre for Research and Analysis of Migration – London University College) and at IZA (Institute of Labor Economics - Bonn), and a Professor of Economic Studies at the University of the Basque Country.

She is a member of the Economic Affairs Advisory Council, which advises the First Vice-President of the Government of Spain and Minister for the Economy and Digital Transformation, as well as member of the Advisory Commission to the Ministry of Work and Social Economy on the matter of Minimum Interprofessional Salary.

**ACADEMIC TRAINING:**

With a PhD in Economics from the University of the Basque Country, she has dedicated a large portion of her professional life to the study of and search for solutions on issues such as immigration, the labour market, gender equality and poverty.

She regularly publishes academic articles in domestic and international magazines dealing with economic issues, mainly related to labour, participates in conferences and seminars, and supervises graduate students in their dissertations.

**NOTEWORTHY EXPERIENCE IN THE ENERGY AND INDUSTRIAL ENGINEERING SECTOR:**

She has been a member of the Appointments Committee of Iberdrola. She has also been an independent director of the Iberdrola group’s country subholding company in Spain, “Iberdrola Española, S.A.” (Sociedad Unipersonal).

**NOTEWORTHY EXPERIENCE IN OTHER INDUSTRIES:**

She has been president and secretary of the European Society for Population Economics and a member of its Executive Committee, chair of the Committee on the Situation of Women in Economics (COSME), and a member of the Economic and Social Council (CES). She has also been the secretary of the Spanish Economics Association (AEE).

In addition, she has been a member of the Scientific Advisory Board of Fundación Gadea and of the Scientific Committee of the Basque Institute for the Evaluation of the Educational System (IVEI-ISEI). Furthermore, she has been a member of the Board of Directors of Basquetour, Turismoaren Euskal Agentzia, Agencia Vasca de Turismo, S.A., a government-owned company of the Department of Tourism, Trade and Consumption of the Basque Government, created to lead the promotion and implementation of the competitiveness strategy of Basque tourism.

She has worked on editorial boards and/or research project review boards.

In 2018 she was given the “2018 Basque Economist Award” (Ekonomistak Saria 2018) by the Basque Association of Economists (Colegio Vasco de Economistas).

Taplow, United Kingdom, 1957

**OTHER CURRENT POSITIONS AND PROFESSIONAL ACTIVITIES:**
She is an independent director of “The Weir Group plc”, a visiting professor at University College London and a member of the international think tank Trilateral Commission.

**ACADEMIC TRAINING:**
She was educated at the Belfast Royal Academy and read English at the University of Leeds, graduating with a BA in 1980 and then taking a Doctorate in linguistics in 1988. She was granted an Honorary Doctorate of Laws from the University of Leeds in 2009.

**NOTEWORTHY EXPERIENCE IN THE ENERGY AND INDUSTRIAL ENGINEERING SECTOR:**
She has been an independent director of the Iberdrola group’s country subholding company in the United Kingdom, “Scottish Power, Ltd.”, and a non-executive director of “Aggreko plc”.

**NOTEWORTHY EXPERIENCE IN OTHER INDUSTRIES:**
She has been a diplomat and the Founding Director of the Diplomatic Academy of the Foreign and Commonwealth Office (“FCO”) of the British government.
She succeeded Mr Paul Boateng as British High Commissioner to South Africa, Swaziland and Lesotho.
She was appointed by open competition as the first Chief Executive of the newly established Equality and Human Rights Commission, the successor body to the Commission for Racial Equality, the Disability Rights Commission and the Equal Opportunities Commission.
She was Director-General for Europe at the FCO, leading the FCO's contribution to the UK’s 2005 Presidency of the European Union, advising the Foreign Secretary and the Minister on the European Union and other European policy issues.
She also served as the FCO's Director for Global Issues and then as Director-General for Regional Programmes at the Department for International Development (DfID), supervising the UK’s overseas bilateral aid programmes.
She joined the FCO and completed overseas postings in South Africa, India, France and Mexico.
She was appointed Companion of the Order of St Michael and St George (CMG) in the 2003 New Year Honours and Dame Commander of the Order of St Michael and St George (DCMG) in the 2011 Birthday Honours.
She was vice-provost (international) at University College London, a trustee of the charity institution Sentebale and a director of the non-profit organisation London First.
São Paulo, Brazil, 1965

OTHER CURRENT POSITIONS AND PROFESSIONAL ACTIVITIES:

Founder and CEO of “RNA Capital Ltda.” and director of “Cielo S.A.”

ACADEMIC TRAINING:

Degree in Business Administration from Mackenzie University. She attended courses in Trade Finance and Corporate Finance at the School of Continuing Studies at New York University, Leadership at Columbia University, and International, Global and Multinational Business Development at INSEAD Fontainebleau.

NOTEWORTHY EXPERIENCE IN THE ENERGY AND INDUSTRIAL ENGINEERING SECTOR:

She has held the position of independent director at “Neoenergia S.A.”, the Iberdrola group's country subholding company in Brazil.

She has been an independent director and member of the Audit Committee of “Companhia Distribuidora de Gás do Rio de Janeiro S.A.”, the main activity of which is the distribution and retail sale of natural gas in the State of Rio de Janeiro (Brazil).

NOTEWORTHY EXPERIENCE IN OTHER INDUSTRIES:

She has more than 30 years of experience in the domestic and international financial market.

She has been a member of the Risk and Capital Committee of Banco do Brasil, an independent director of “IRB-Brasil Resseguros, S.A.”, coordinating chair of its Risk and Solvency Committee and member of its Investments, Capital Structure and Dividend Committee, as well as a member of the Advisory Board of “Mercado Eletrônico S.A.”, a B2B e-commerce company.

She worked for 20 years at S&P Global Ratings. She was president of operations in Brazil and Argentina, and was Head of the Southern Cone in Latin America, Deputy-Head in Latin America, board member of BRC Ratings (Colombia) and head of Global Development Markets.

Before joining S&P, she also worked at other financial institutions such as Chase Manhattan and Citibank in the areas of credit and risk analysis. At the Commercial Bank of New York, she led the Credit and Correspondent Banking and Risk (Trade Finance) Areas focused on Latin America.

For three years, she was an independent consultant in Brazil, having worked on privatisation programmes, investments of international funds in the Brazilian market, M&A and financial engineering projects.

C.1.5 Indicate whether the company has diversity policies in relation to its Board of Directors on such questions as age, gender, disability, education and professional experience. Small and medium-sized enterprises, in accordance with the definition set out in the Spanish Auditing Act, will have to report at least the policy that they have implemented in relation to gender diversity.

[ X ] Yes [ ] No [ ] Partial policies

If so, describe these diversity policies, their objectives, the measures and the way in which they have been applied and their results over the year. Also indicate the specific measures adopted by the Board of Directors and the nomination and remuneration committee to achieve a balanced and diverse presence of directors.

If the company does not apply a diversity policy, explain the reasons why.

**Description of policies, objectives, measures and how they have been applied, and results achieved**

The Company’s Governance and Sustainability System, and particularly the Board of Directors Diversity and Member Selection Policy, expressly promotes the search for candidates whose appointment favours a diversity of skills, knowledge, experience, origin, nationality, age and gender among the members of the Board of Directors.

For these purposes, said corporate policy provides that any type of bias that might entail any kind of discrimination shall be avoided, particularly any bias that hinders the appointment of female directors, establishing the goal that the number of female directors accounts for at least 40% of the total number of members of the Board of Directors. This policy also provides that in the selection of candidates, it shall endeavour to ensure a diverse and balanced composition of the Board of Directors overall, such that decision-making is enriched and multiple viewpoints are contributed to the discussion of the matters within its purview, and that the diversity criteria shall be chosen based on the nature and complexity of the businesses, as well as the social and environmental context.
In any case, the candidates must be respectable persons, widely recognised for their expertise, competence, experience, qualifications, training, availability and commitment to their duties. Furthermore, the selection process shall promote a search for candidates with knowledge and experience in the main countries and sectors in which the companies of the Iberdrola group do or will do business, and the directors must have a sufficient knowledge of Spanish and English to perform their duties. They must also be irreproachable professionals, whose conduct and professional track record is aligned with the principles set forth in the Code of Ethics and with the corporate values contained in the Purpose and Values of the Iberdrola group.

This selection shall be based on an analysis of the needs of the Company and of the other companies of the Iberdrola group, which must be carried out by the Board of Directors with the advice of the Appointments Committee.

In this regard, the Regulations of the Appointments Committee assign to this committee the duty to periodically review, evaluate compliance with and propose changes to the Board of Directors Diversity and Member Selection Policy. In addition, the Board of Directors is vested with the power to periodically evaluate the level of compliance with and effectiveness of this policy.

As a result, the Board of Directors has a diverse composition considering multiple factors, including:

- the varied skills, knowledge and professional backgrounds provided by the existence of a large majority of external directors (85.71%, compared to 14.29% of executive directors), and particularly of independent directors (71.43%), whose profiles are included in section C.1.3 of this report;

- the presence of directors with six nationalities (Spain, France, Italy, Great Britain, United States of America and Brazil) in line with the international coverage of the Iberdrola group; and

- the balanced presence of women and men (50/50 distribution of external directors of each gender and no gender with a representation of less than 42.86% of the total number of directors), further details of which are provided in the following section of this report.

The Company reaffirms these commitments to diversity in the update of ESG targets published on 9 November 2022 within the framework of “Capital Markets & ESG Day”, expressly including the promotion of diversity within the Board of Directors and the existence of at least forty per cent of female directors within the governance targets.

C.1.6 Describe the measures, if any, agreed upon by the nomination committee to ensure that selection procedures do not contain hidden biases which impede the selection of female directors and that the company deliberately seeks and includes women who meet the target professional profile among potential candidates, making it possible to achieve a balance between men and women. Also indicate whether these measures include encouraging the company to have a significant number of female senior executives:

<table>
<thead>
<tr>
<th>Explanation of measures</th>
</tr>
</thead>
</table>

Iberdrola recognises the development of professional relations based on equal opportunities to be a strategic objective, and in particular considers gender equality to be part of the organisation’s core values.

The Board of Directors Diversity and Member Selection Policy and the selection of its members has allowed the Company to achieve a balanced presence of women and men, which is reflected in the 50/50 distribution of external directors between both genders and in no gender with a representation of less than 42.86% of the total number of directors.
Iberdrola thus antedated compliance with applicable requirements since 2021 by continuously meeting the goal set out in the Good Governance Code of Listed Companies of 40% female board members by the end of 2022, with a minimum 40% presence of each gender among non-executive members and 33.33% presence among all members set for 30 June 2026 in Directive (EU) 2022/2381 of the European Parliament and of the Council of 23 November 2022.

The annex to this report describes the resolutions adopted in application of this corporate policy, which is subject to regular review and evaluation by the Appointments Committee, allowing the Company to achieve the current balanced presence of women and men on the Board of Directors.

In turn, the Equality, Diversity and Inclusion Policy promotes gender equality at all companies of the group in accordance with international best practices and goal five of the Sustainable Development Goals (“SDGs”) approved by the United Nations, particularly as regards access to employment, professional training and promotion, and working conditions.

Iberdrola’s Diversity and Inclusion Division is responsible for the implementation, monitoring and verification of compliance with the policy, which provides for the following actions, among others: (i) analysing affirmative measures to correct any inequalities that may arise and to promote access by the underrepresented gender to positions of responsibility in which they have little or no representation; (ii) guaranteeing the principle of equal opportunity in professional development, removing any obstacles that may impede or limit careers due to gender; (iii) promoting mechanisms and procedures for selection and professional development that facilitate the presence of the underrepresented gender with the necessary qualifications in all areas of the organisation in which it is underrepresented, e.g. through the implementation of programmes that encourage the companies of the Iberdrola group to have a significant number of female senior officers; (iv) ensuring balanced representation in the various decision-making bodies and levels, guaranteeing participation under conditions of equal opportunity in all areas of consultation and decision-making; (v) promoting the organisation of working conditions with a gender perspective; (vi) establishing protective measures for women to prevent certain situations specific to this group from having a negative impact on their professional careers; and (vii) strengthening the Iberdrola group’s commitment to gender equality both within the organisation and in society and raising awareness.

Furthermore, the annual and multi-annual variable remuneration of executive directors includes goals to reduce the gender gap, highlighting the presence of women in high-ranking positions and positions of responsibility (management positions, middle management and highly qualified technical positions), as well as ensuring the absence of a salary gap:

- The Company’s ESG targets published on 9 November 2022 within the framework of “Capital Markets & ESG Day” included the presence of women in significant positions (the targets being 30% by 2025 and 35% by 2030) and the presence of women in positions of responsibility (the targets being 35% by 2025 and 36% by 2030). Section C.1.14 of this Report shows that the percentage of the Company’s top female executives is above 30% at year-end 2022.

- The absence of a pay gap between women and men is one of the SDG parameters used to determine the calculation of the long-term variable remuneration of the executive directors, management personnel and other professionals of Iberdrola and other companies of the group, specifically, the 2020-2022 Strategic Bonus approved by the shareholders at the General Shareholders’ Meeting held on 2 April 2020. The pay gap is defined as the difference between the average remuneration of women and men working at the companies of the group. And remuneration is considered to be the full-time equivalent annualised salary at 31 December 2020, 2021 and 2022, plus supplements and annual variable remuneration received during the corresponding year. As indicated in section A.3 of this report, the Board of Directors, upon a proposal of the Remuneration Committee, must evaluate the Company’s performance against the objectives of the 2020-2022 Strategic Bonus.

Finally, the Company’s ESG targets published on 9 November 2022 within the framework of the “Capital Markets & ESG Day” included the receipt of external certification of equal gender pay by 2025 to ensure compliance with applicable legal provisions and with the Company’s commitments, in order to continue fostering equilibrium between women and men within the organisation.
If in spite of any measures adopted there are few or no female directors or senior managers, explain the reasons for this:

</table>

**C.1.7** Explain the conclusions of the nomination committee regarding verification of compliance with the policy aimed at promoting an appropriate composition of the Board of Directors.

Taking into consideration the information contained in the two preceding sections of this report, the Appointments Committee believes that Iberdrola is applying the Board of Directors Diversity and Member Selection Policy in a fully consistent manner and that the composition of its Board of Directors is balanced and diverse.

**C.1.8** If applicable, explain the reasons for the appointment of any proprietary directors at the request of shareholders with less than a 3% equity interest:

<table>
<thead>
<tr>
<th>Name or company name of shareholder</th>
<th>Reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>No data</td>
<td></td>
</tr>
</tbody>
</table>

Indicate whether the Board has declined any formal requests for presence on the Board from shareholders whose equity interest is equal to or greater than that of others at whose request proprietary directors have been appointed. If so, explain why the requests were not granted:

[ ] Yes  [X] No

**C1.9** Indicate the powers, if any, delegated by the Board of Directors, including those relating to the option of issuing or repurchasing shares, to directors or board committees:

<table>
<thead>
<tr>
<th>Name or company name of director or committee</th>
<th>Brief description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MR JOSÉ IGNACIO SÁNCHEZ GALÁN</td>
<td>As executive chairman, he has all the powers that may be delegated under the law and the By-Laws. He assumes all the duties that are not expressly assigned to the chief executive officer.</td>
</tr>
<tr>
<td>MR ARMANDO MARTÍNEZ MARTÍNEZ</td>
<td>As chief executive officer, he has all the powers that may be delegated under the law and the By-Laws. He has overall responsibility for coordinating the management of the businesses of the companies of the group, with the highest executive duties in that area.</td>
</tr>
<tr>
<td>Executive Committee</td>
<td>All the powers inherent to the Board of Directors, except for those powers that may not be delegated pursuant to law or the Governance and Sustainability System, including the ability to issue or repurchase shares (as approved by the shareholders at the General Shareholders' Meeting), are delegated thereto.</td>
</tr>
</tbody>
</table>
C.1.10 Identify any members of the Board who are also directors, representatives of directors or managers in other companies forming part of the listed company's group:

<table>
<thead>
<tr>
<th>Name or company name of director</th>
<th>Company name of the group entity</th>
<th>Position</th>
<th>Does the director have executive</th>
</tr>
</thead>
<tbody>
<tr>
<td>MR JOSÉ IGNACIO SÁNCHEZ GALÁN</td>
<td>AVANGRID, INC.</td>
<td>Chair</td>
<td>No</td>
</tr>
<tr>
<td>MR JOSÉ IGNACIO SÁNCHEZ GALÁN</td>
<td>NEOENERGIA S.A.</td>
<td>Chair</td>
<td>No</td>
</tr>
<tr>
<td>MR JOSÉ IGNACIO SÁNCHEZ GALÁN</td>
<td>SCOTTISH POWER LTD.</td>
<td>Chair</td>
<td>No</td>
</tr>
</tbody>
</table>

C.1.11 List the positions of director, administrator or representative thereof, held by directors or representatives of directors who are members of the company's board of directors in other entities, whether or not they are listed companies:

<table>
<thead>
<tr>
<th>Identity of the director or representative</th>
<th>Company name of the listed or non-listed entity</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

| Total remuneration of senior management (thousands of euros) | 20,889 |

Mr. Pedro Azagra Blázquez resigned as Director of Corporate Development on 1 June 2022.
The appointment of Mr Armando Martínez Martínez as a member of the Board of Directors, with the position of chief executive officer, was approved was approved on 25 October 2022.

Mr Agustín Delgado Martín joined Senior Management as Director of Innovation and Sustainability on 15 November 2022.

The amount of fixed and variable remuneration of the officers and other professionals with management responsibilities not included in Iberdrola’s senior management amounted to €136,277 thousand in 2022 (734 people) and €131,942 thousand in 2021 (767 people), affected by the exchange rate.

C.1.15 Indicate whether the Board regulations were amended during the year:

[ X ] Yes  [ ] No

As part of the process of ongoing review of the Governance and Sustainability System, in addition to certain technical improvements, amendments have been made to the Regulations of the Board of Directors in order to, among other things: (i) assign to the Sustainable Development Committee the duty to receive periodic information on the measures and procedures adopted within the Iberdrola group to implement and monitor compliance with the provisions of the Policy on Respect for Human Rights, as well as report thereon to the Board of Directors, (ii) include the term “human capital” to include and showcase the skills and abilities of the professionals of the Iberdrola group’s companies, as a concept unto itself and different than the term human resources, which mainly refers to the management of these professionals, (iii) provide for the payment of financial incentives for participation in the General Shareholders’ Meeting other than the attendance bonus, in line with the amendments of the By-Laws and the Regulations for the General Shareholders’ Meeting approved at the General Shareholders’ Meeting held on 17 June 2022, (iv) adjust the powers of the Appointments Committee regarding the appointment and removal of external directors of companies belonging to the Iberdrola group, and (v) adjust the text thereof to the separation of executive positions and the appointment of a new chief executive officer at the Company.

C.1.16 Specify the procedures for selection, appointment, re-election and removal of directors. List the competent bodies, steps to follow and criteria applied in each procedure.

– SELECTION, APPOINTMENT AND RE-ELECTION OF DIRECTORS

The appointment and re-election of directors is within the purview of the shareholders at the General Shareholders’ Meeting.

Vacancies that occur may be filled by the Board of Directors on an interim basis (co-option procedure) until the next General Shareholders’ Meeting.

The Appointments Committee advises the Board of Directors regarding the most appropriate configuration of the Board of Directors itself and of the committees thereof as regards size and equilibrium among the various classes of directors by taking into account, in all cases, the requirements that must be met by director candidates pursuant to the Board of Directors Diversity and Member Selection Policy.

The Appointments Committee shall also review the criteria for the selection of candidates for directors and assist the Board of Directors in defining the profiles that these candidates must meet, in view of the needs of the Board of Directors and based on the areas within the Board that should be strengthened, as well as ensure that the selection
procedures do not suffer from implicit biases that could entail any discrimination, and particularly that could hinder the selection of female directors.

The Board of Directors and the Appointments Committee, within the scope of their powers, shall endeavour to ensure that the candidates proposed are respectable and qualified persons, widely recognised for their expertise, competence, experience, qualifications, training, availability, and commitment to their duties. In the selection of candidates, it shall also endeavour to ensure the achievement of appropriate balance within the Board of Directors as a whole, such that decision-making is enriched and multiple viewpoints are contributed to the discussion of the matters within its purview.

Specifically, it falls upon the Appointments Committee to propose the independent directors, as well as to report upon the proposals relating to the other classes of directors. For these purposes, during the selection process, the chairman or one of the members of the Appointments Committee shall meet with each of the candidates for director before the issuance of its report or proposal. If the Board of Directors deviates from the proposals and reports of the Appointments Committee, it shall give reasons for so acting and shall record such reasons in the minutes.

The following may not be appointed as directors:

a. Legal entities.

b. Persons who hold the position of director or who are members of senior management of domestic or foreign companies competing with the Company in the energy industry or other industries, or such persons, if any, as are proposed by them in their capacity as shareholders.

c. Persons serving as directors in more than five companies, of which no more than three may have shares trading on domestic or foreign stock exchanges. Positions within holding companies are excluded from the calculation. Furthermore, companies belonging to the same group shall be deemed to be a single company.

d. Persons who, during the two years prior to their appointment, have occupied high-level positions in Spanish government administrations that are incompatible with the simultaneous performance of the duties of a director of a listed company under Spanish national or autonomous community law, or positions of responsibility with entities regulating the energy industry, the securities markets or other industries in which the Iberdrola group’s companies operate.

e. Persons that are under any other circumstance of disqualification or prohibition governed by provisions of a general nature, including those that have interests in any way opposed to those of the Company or the Iberdrola group.

In the case of re-election of directors, the Appointments Committee shall evaluate the quality of the work and dedication to the position of the directors proposed during the previous term of office, and expressly their respectability, suitability, expertise, competence, availability and commitment to their duties. Prior to the expiry of the term for which a director has been appointed, the Appointments Committee shall also examine the advisability of the re-election thereof.

2. REMOVAL OF DIRECTORS

Directors serve in their position for a term of four years, so long as the shareholders acting at the General Shareholders’ Meeting do not resolve to remove them and they do not resign from their position.

The Appointments Committee must inform the Board of Directors regarding proposed removals due to breach of the duties inherent to the position of director or due to a director becoming affected by supervening circumstances of mandatory resignation or withdrawal. It may also propose the removal of directors in the event of disqualification, structural conflict of interest or any other reason for resignation or cessation of office, pursuant to law or the Governance and Sustainability System.

The Board of Directors may propose the removal of an independent director before the passage of the period provided for in the By-Laws only upon sufficient grounds, evaluated by the Board of Directors after a report from the
Appointments Committee, or as a consequence of takeover bids, mergers or other similar corporate transactions resulting in a significant change in the shareholding structure of the Company, as recommended by the Good Governance Code of Listed Companies.

C.1.17 Explain to what extent the annual evaluation of the Board has given rise to significant changes in its internal organisation and in the procedures applicable to its activities:

<table>
<thead>
<tr>
<th>Description of amendment(s)</th>
</tr>
</thead>
</table>

Iberdrola is firmly committed to the ongoing development of its corporate governance and complying with the best practices in force at all times. For these purposes, the Board of Directors annually evaluates the operation of its governance bodies and the performance of the directors.

The evaluation process for financial year 2022 concluded with a very positive assessment of the quality and efficiency of the operation of the Board of Directors and the committees thereof, as well as of the performance of the chairman, the chief executive officer and the other directors. No deficiencies were identified that required the implementation of an action plan to correct them. Without prejudice to all of the foregoing, the customary Continuous Improvement Plan was approved, which pursues excellence both in internal organisation and in the procedures applicable to the activities of the corporate bodies.

The results of the evaluation also demonstrated 100% achievement of the 30 areas of work defined in the Continuous Improvement Plan approved as a result of the evaluation of financial year 2021.

The following milestones were also achieved during financial year 2022:

**Composition:**
- Separation of the roles of executive chairman and chief executive officer.
- Continuous renewal of the Board of Directors with the appointment of Mr Armando Martínez Martínez as chief executive officer.

**Development of competencies:**
- Update of skills matrix.
- Monitoring of the Outlook 2020-2025 and approval of the new Strategic Plan 2023-2025.
- Comprehensive monitoring of risks, particularly macroeconomic risks and their impact on the markets.
- Monitoring by the committees of the results of the General Shareholders’ Meeting according to their respective powers.
- Reorganisation of the Company’s organisation chart to adjust it to the separation of the roles of executive chairman and chief executive officer, as well as to strengthen the global nature of Iberdrola and its commitment to innovation and talent. In particular, the Management Development Division was created within the Chairman’s Office, the main function of which will be to manage and retain the talent of the management team, and the Director of Innovation and Sustainability became part of the Company’s senior management.

**Operation:**
- Presentations by the chairs of consultative committees regarding the activities of those bodies, with the scope and detail required at meetings of the Board of Directors.
- Training on key topics for the Board of Directors and its committees (e.g. cybersecurity, non-financial information, taxonomy, regulatory developments, etc.) and in line with the interests expressed by the directors.

**Environmental and social issues:**
- Update of the Climate Action Plan.
- Oversight of social aspects of the ESG strategy.
Transparency:
- Organisation of Capital Markets & ESG Day, thereby reinforcing communication to the market of both financial results and ESG metrics. Specific reporting on the Cybersecurity Governance Model.

Description of the evaluation process and the areas evaluated by the Board of Directors with or without the help of an external advisor, regarding the functioning and composition of the Board and its committees and any other area or aspect that has been evaluated.

<table>
<thead>
<tr>
<th>Description of the evaluation process and areas evaluated</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Appointments Committee coordinates the evaluation of the operation of the Board of Directors and of the committees thereof on an annual basis, and submits the results of said evaluation to the full Board of Directors together with any proposed action plan to correct potential deficiencies detected.</td>
</tr>
<tr>
<td>The evaluation process for financial year 2022 used “PricewaterhouseCoopers Asesores de Negocios, S.L.” (“PwC Asesores”) as an external adviser.</td>
</tr>
<tr>
<td>The scope of the process included the evaluation of the Board of Directors, its committees, the chairman, the chief executive officer and each of the other directors of the Company from the perspective of the following dimensions: (i) compliance with internal rules and with the CNMV Good Governance Code of Listed Companies, (ii) monitoring of corporate governance trends, and (iii) analysis of compliance with potential areas for progress defined in evaluations from prior years.</td>
</tr>
<tr>
<td>The evaluation of the chairman of the Board of Directors was led by the first vice-chair and lead independent director.</td>
</tr>
<tr>
<td>This process included a comparative analysis of 25 companies, including (i) those considered to have best practices at the domestic and international level, and (ii) both domestic and international comparable companies.</td>
</tr>
<tr>
<td>This evaluation used 389 best practices indicators, which practices were assessed using objective and verifiable evidence. This was all supplemented by interviews conducted with the directors by the first vice-chair and lead independent director, in which he collected feedback on the performance of the Board of Directors and its committees, in line with the recommendations of the Good Governance Code of Listed Companies and the Technical Guide 1/2019 on Nomination and Remuneration Committees published by the CNMV.</td>
</tr>
<tr>
<td>The process concluded on 21 February 2023 with the approval by the Board of Directors of the results of the evaluation of financial year 2022 and the Continuous Improvement Plan for financial year 2023. This document includes 30 areas for progress, including the following:</td>
</tr>
<tr>
<td>- Dedication of time in the agenda to supervising the implementation of the new Strategic Plan 2023-2025.</td>
</tr>
<tr>
<td>- Continuous review of best corporate governance practices in terms of critical aspects examined in the committees regarding composition and renewal of the Board, remuneration and ESG strategy.</td>
</tr>
<tr>
<td>- Supervision of implementation of a new cybersecurity governance strategy and model for the Company.</td>
</tr>
<tr>
<td>- Combination of participation by top executives in the Board of Directors and its committees with the expertise of new talent in the management team.</td>
</tr>
</tbody>
</table>

C.1.18 Provide details, for years in which the evaluation was carried out with the help of an external advisor, of the business relationships that the external advisor or company in its group maintains with the company or any company in its group.

The Company has been advised by an outside consultant for the last thirteen years.
PwC’s business relations with the companies within the Iberdrola group worldwide were approximately €36,656 thousand in 2022. Specifically, the total amount of billing by the PwC group for consulting services provided to the Company’s Board of Directors and the Office of the Secretary thereof was €491 thousand during that financial year.
C.1.19 Indicate the cases in which directors are obliged to resign.

Directors must submit their resignation from the position and formally resign from their position upon the occurrence of any of the instances of disqualification, lack of competence, structural and permanent conflict of interest or prohibition against performing the duties of director provided by law or the Governance and Sustainability System.

In this connection, the Regulations of the Board of Directors provide that the directors must submit their resignation to the Board of Directors in the following cases:

1. When, due to supervening circumstances, they are involved in any circumstance of disqualification or prohibition provided by law or the Governance and Sustainability System.

2. When, as a result of any acts or conduct attributable to the director, serious damage is caused to the value or reputation of the Company or there is a risk of criminal liability for the Company or any of the companies of the Iberdrola group.

3. When there are situations that affect them, whether or not related to their conduct within the Company itself, that might harm the good standing or reputation thereof.

4. When they cease to deserve the respectability or to have the capability, expertise, competence, availability or commitment to their duties required to be a director of the Company.

   In particular, when the activities performed by the director, or the companies that the director directly or indirectly controls, or the individual or corporate shareholders or those related to any of them, might compromise the suitability thereof.

5. When they are seriously reprimanded by the Board of Directors because they have breached any of their duties as directors.

6. When their continuance in office on the Board of Directors may for any reason, either directly, indirectly, or through persons related thereto, jeopardise the faithful and diligent performance of their duties in furtherance of the corporate interest.

7. When the reasons why the director was appointed cease to exist and, in particular, in the case of proprietary directors, when the shareholder or shareholders who proposed, requested, or decided the appointment thereof totally or partially sell or transfer their equity interest, with the result that such equity interest ceases to be significant or sufficient to justify the appointment.

8. When an independent director unexpectedly falls under supervening circumstances that prevent the director from being considered as such pursuant to the provisions of law.

The resignation provisions set forth under points 6 and 7 above shall not apply when, after a report from the Appointments Committee, the Board of Directors believes that there are reasons that justify the director’s continuance in office, without prejudice to the effect that the new supervening circumstances may have on the classification of the director.

C.1.20 Are qualified majorities other than those established by law required for any particular kind of decision?:

[ X ] Yes [ ] No

If so, describe the differences.
The Regulations of the Board of Directors require a majority of at least two-thirds of the directors present at the meeting in person or by proxy to approve the amendment thereof.

The Regulations of the Board of Directors also state that directors must tender their resignation to the Board of Directors if they are seriously reprimanded thereby because they have breached any of their duties as directors, by resolution adopted by a two-thirds majority of the directors.

C.1.21 Explain whether there are any specific requirements, other than those relating to directors, for being appointed as chairman of the Board of Directors:

[ ] Yes  [X] No

C.1.22 Indicate whether the articles of incorporation or Board regulations establish any limit as to the age of directors:

[ ] Yes  [X] No

The Regulations of the Board of Directors provide that the standards to take into account for selecting candidates for the position of director shall include, by way of guidance only, the appropriateness of the directors generally not exceeding the age of seventy years.

Each of the non-executive directors has undertaken to tender their resignation to the Board of Directors at the first meeting it holds after they reach seventy years of age.

C.1.23 Indicate whether the articles of incorporation or Board regulations establish any term limits for independent directors other than those required by law or any other additional requirements that are stricter than those provided by law:

[ ] Yes  [X] No

C.1.24 Indicate whether the articles of incorporation or Board regulations establish specific rules for appointing other directors as proxy to vote in Board meetings, if so the procedure for doing so and, in particular, the maximum number of proxies that a director may hold, as well as whether any limit has been established regarding the categories of director to whom votes may be delegated beyond the limits imposed by law. If so, briefly describe these rules.

Pursuant to the By-Laws, all of the directors may cast their vote and give their proxy in favour of another director, provided, however, that non-executive directors may only do so in favour of another non-executive director.

The Regulations of the Board of Directors require that directors attend the meetings of the Board of Directors and when they cannot do so personally they must grant their proxy to another director, to whom they must give the appropriate instructions.

Directors may not grant a proxy in connection with matters in respect of which they have any conflict of interest.
The proxy granted shall be a special proxy for the Board meeting in question and may be communicated by any means allowing for receipt thereof.

There is no maximum number of proxies provided per director.

C.1.25 Indicate the number of meetings held by the Board of Directors during the year. Also indicate, if applicable, the number of times the Board met without the chairman being present. Meetings where the chairman gave specific proxy instructions are to be counted as attended.

<table>
<thead>
<tr>
<th>Number of board meetings</th>
<th>11</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of board meetings held without the chairman’s presence</td>
<td>0</td>
</tr>
</tbody>
</table>

Indicate the number of meetings held by the coordinating director with the other directors, where there was neither attendance nor representation of any executive director:

| Number of meetings | 1 |

Indicate the number of meetings held by each Board committee during the year:

<table>
<thead>
<tr>
<th>Number of meetings held by the Executive Committee</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of meetings held by the Audit and Risk Supervision Committee</td>
<td>15</td>
</tr>
<tr>
<td>Number of meetings held by the Appointments Committee</td>
<td>13</td>
</tr>
<tr>
<td>Number of meetings held by the Remuneration Committee</td>
<td>10</td>
</tr>
<tr>
<td>Number of meetings held by the Sustainable Development Committee</td>
<td>10</td>
</tr>
</tbody>
</table>

Pursuant to the provisions of Article 45 of the By-Laws, the lead independent director coordinates, meets with and reflects the concerns of the non-executive directors, and also directs the periodic evaluation of the chairman of the Board of Directors and leads any process for the succession thereof.

In the exercise of these powers, the lead independent director has held meetings with all of the non-executive directors, which meetings dealt with the evaluation of the chairman as well as with initiatives to improve the performance of each of the directors.

C.1.26 Indicate the number of meetings held by the Board of Directors during the year with member attendance data:

<table>
<thead>
<tr>
<th>Number of meetings in which at least 80% of directors were present in person</th>
<th>11</th>
</tr>

<td>Number of meetings with attendance in person or proxies given with specific instructions, by all directors</td>
<td>11</td>
</tr>
<tr>
<td>Votes cast in person and by proxies with specific instructions, as a % of total votes during the year</td>
<td>100.00</td>
</tr>
</tbody>
</table>

The attendance of each and every one of the directors at the meetings of the Board of Directors and its committees during financial year 2022 is described in the annex to this report.
C.1.27 Indicate whether the individual and consolidated financial statements submitted to the Board for issue are certified in advance:

[ X ] Yes  
[ ] No

Identify, if applicable, the person(s) who certified the individual and consolidated financial statements of the company for issue by the Board:

<table>
<thead>
<tr>
<th>Name</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>MR JOSÉ IGNACIO SÁNCHEZ GALÁN</td>
<td>Executive Chairman</td>
</tr>
<tr>
<td>MR JOSÉ SAINZ ARMADA</td>
<td>Finance, Control and Corporate Development Director (CFO)</td>
</tr>
</tbody>
</table>

Iberdrola has established a certification process by which those responsible for financial information in the different areas of the Iberdrola group (i.e. those responsible for the country subholding companies and global corporate areas) certify that: (i) the financial information they deliver to the Company for purposes of consolidation does not contain any material errors or omissions and provides a fair view of the results and the financial condition within their area of responsibility, and (ii) they are responsible for establishing the Internal Control over Financial Reporting System (ICFRS) system within their area of responsibility and have found that the system is effective. The text of these certifications is inspired by the form of certification established in Section 302 of the U.S. Sarbanes-Oxley Act.

The culmination of the process is a joint certification that the executive chairman and the CFO submit to the Board of Directors.

The process is carried out by means of electronic signature in a software application which manages the areas of responsibility and time periods and which serves as a repository of all the documentation generated, allowing for periodic review by the supervision and control bodies of the Iberdrola group’s companies.

C.1.28 Explain the mechanisms, if any, established by the Board of Directors to ensure that the financial statements it presents to the General Shareholders’ Meeting are prepared in accordance with accounting regulations.

The Regulations of the Audit and Risk Supervision Committee (the “Committee”) provide that it shall have the following duties, among others:

- Supervise (on an ongoing basis and specifically at the request of the Board of Directors) the process of preparing and presenting regulated financial information relating to the Company, both individual and consolidated with its subsidiaries, reviewing compliance with legal requirements, the proper delimitation of the scope of consolidation and the correct application of accounting standards, and submit recommendations or proposals to the Board of Directors to safeguard the integrity thereof.

- Supervise the clarity and integrity of the financial information regarding the Company and its group based on available sources of internal information (including reports from the Internal Audit Area and the Risk Management and Internal Assurance Division, reports from other areas or departments, or the analysis and opinion of the Company’s management team itself) and external information (including reports from experts or information received from the statutory auditor), and reach its own conclusion as to whether the Company has properly applied the accounting policies. It shall also ensure that the interim financial statements are prepared using the same accounting principles as the annual financial statements.

- Establish appropriate relationships with the statutory auditor to receive information regarding matters that might entail a threat to the independence thereof, for examination by the Committee, and any other information related to the development of the audit procedure, as well as such other communications as are provided for in the laws on statutory audit and in other legal provisions on auditing.
The Committee must receive written confirmation from the statutory auditor on an annual basis of its independence in relation to the Company or entities directly or indirectly related thereto, as well as a detailed breakdown of information on additional (non-auditing) services of any kind provided to and the corresponding fees received from such entities by such statutory auditors or by persons or entities related thereto, pursuant to the legal provisions governing the audit of accounts.

On an annual basis, prior to the audit report, issue a report containing an opinion on whether the independence of the statutory auditors is compromised, which shall be made available to the shareholders upon the terms set forth in the Regulations for the General Shareholders’ Meeting. This report shall contain a reasoned assessment of the provision of each and every one of the additional services other than the legal audit referred to in the preceding point, considered individually and as a whole, and in relation to the rules on independence or the legal provisions governing the audit of accounts.

Report in advance to the Board of Directors regarding the financial information that the Company must disclose on a regular basis because of its status as a listed company; the Committee shall ensure that the interim statements are prepared in accordance with the same accounting standards as the annual financial statements and, for such purpose, it shall consider the appropriateness of a limited review by the statutory auditor.

Review the contents of the audit reports on the accounts and of the reports on the limited review of interim accounts, if any, as well as other mandatory reports to be prepared by the statutory auditor, prior to the issuance thereof, in order to avoid qualified reports.

Assess the results of each audit of accounts and supervise the response of the members of senior management to the recommendations made therein.

Act as a channel of communication between the Board of Directors and the statutory auditors, causing them to hold an annual meeting with the Board of Directors to report thereto on the work performed and the accounting status and risks of the Company.

Evaluate any proposal made by the members of senior management regarding changes in accounting practices.

Analyse the reasons why the Company may itemise certain alternative information on returns in its public information instead of the measures directly defined by accounting rules, the extent to which useful information is provided to investors, and the level of compliance thereof with best practices and international recommendations in this area.

Obtain information on significant adjustments identified by the statutory auditor or that result from revisions made by the Internal Audit Area and the position of the management team regarding said adjustments.

Timely and properly attend to, answer and take into account any requests sent thereto by the National Securities Market Commission during the current financial year or in prior years, ensuring that the same types of incidents previously identified in said requests are not repeated in the financial statements.

Check that the financial information published on the corporate website of the Company is continuously updated and that it coincides with the information that has been approved by the Board of Directors and published on the website of the National Securities Market Commission.

In turn, the Regulations of the Board of Directors provide that:

The Board of Directors shall meet with the statutory auditor at least once per year in order to receive information regarding the work performed and regarding the accounting status and risks of the Company.

The Board of Directors shall use its best efforts to prepare the annual financial statements such that there is no room for qualifications by the statutory auditor. However, when the Board of Directors believes that its opinion must prevail, it shall provide a public explanation of the content and scope of the discrepancy.
Pursuant to the above-cited rules, the Committee has reported throughout financial year 2022 on the process of preparing and presenting, and the clarity and integrity of, the financial information (separate and consolidated) relating to the Company prior to the approval thereof by the Board of Directors and its submission to the National Securities Market Commission. The reports of the Committee, which the chair thereof has presented to the full Board of Directors, are mainly intended to disclose such aspects, if any, as may give rise to qualifications in the audit report of Iberdrola and its consolidated group.

Accordingly, the Committee submitted to the Board of Directors the following reports regarding the annual, quarterly and half-yearly financial information of the Company for financial year 2022:

- Report dated 25 April 2022 on the results for the first quarter of 2022.
- Report dated 22 July 2022 on the financial information for the first half of 2022.
- Report dated 24 October 2022 on the results for the third quarter of 2022.
- Report dated 20 February 2023 regarding the annual financial statements of Iberdrola and its consolidated group for financial year 2022.

As disclosed in the information about Iberdrola posted on the website of the National Securities Market Commission (www.cnmv.es), the audit reports on the separate and consolidated annual financial statements prepared by the Board of Directors have historically been issued without qualifications.

C.1.29 Is the secretary of the Board also a director?

[ ] Yes [X] No

If the secretary is not a director, complete the following table:

<table>
<thead>
<tr>
<th>Name or company name of the secretary</th>
<th>Representative</th>
</tr>
</thead>
<tbody>
<tr>
<td>MR JULIÁN MARTINEZ-SIMANCAS SÁNCHEZ</td>
<td></td>
</tr>
</tbody>
</table>

C.1.30 Indicate the specific mechanisms established by the company to safeguard the independence of the external auditors, and any mechanisms to safeguard the independence of financial analysts, investment banks and rating agencies, including how legal provisions have been implemented in practice.

MECHANISMS TO PRESERVE THE INDEPENDENCE OF THE AUDITOR

The Regulations of the Audit and Risk Supervision Committee (the “Committee”) and the Statutory Auditor Contracting and Relations Policy provide that:

- The relations of the Committee with the Company’s statutory auditor (the “Auditor”) shall respect the independence thereof.

- The Committee shall discuss with the Auditor any circumstance that might compromise the independence thereof and shall evaluate the effectiveness of the protective measures and the relationships between the Iberdrola group and the Auditor and its network, including those that entail the provision of non-audit services. It shall request from the Auditor a certification of independence of the firm as a whole and of the members of the team participating in the process of auditing the annual financial statements of the Iberdrola group, with a detailed breakdown of information regarding non-auditing services of any kind provided by the Auditor or by persons connected thereto under applicable law. The Auditor shall include in such certification a statement regarding compliance with its internal quality assurance and independence protection procedures and shall submit to the Committee on an annual basis the profiles and professional background
of the members of the Iberdrola group audit teams, indicating any changes with respect to the previous financial year.

- Before issuing the annual audit report, the Committee shall issue a report expressing an opinion on the independence of the Auditor and the potential impact of each and every one of the non-audit services provided by the Auditor or by persons connected thereto, considered individually and as a whole. It shall also supervise the auditor’s internal quality assurance and independence protection procedures and shall receive information on the hiring of professionals from the auditor by any of the companies of the Iberdrola group.

- The Committee shall not submit a proposal to the Board of Directors, and the Board of Directors shall not submit a proposal to the shareholders at the General Shareholders’ Meeting, for appointment as Auditor of firms for which it has evidence that they are affected by a lack of independence, prohibition or disqualification pursuant to applicable legal provisions, and if the total fees received for the provision of audit and non-audit services provided to the Company and to any other entity of the group by the Auditor or audit firm or by a member of its network during each of the last three consecutive financial years represent more than 15% of the total annual income of the Auditor or audit firm and of said network.

The Committee has established a restrictive policy on the non-audit services that the Auditor can be authorised to provide to the Company and its group:

- Prior to formalisation thereof, the Committee must receive information regarding any contract it intends to sign with the Auditor or a member of its network for the provision of non-audit services to the Company or any of the companies of its group, in order to be able to analyse the threats to independence that might arise from said contracts. The Auditor must therefore forward to the Committee any request to approve the provision of non-audit services, sufficiently describing the services requested so that the Committee can analyse the impact of the contracting thereof on independence, both individually and collectively.

- The provision by the Auditor or by any member of its network of non-audit services must be authorised in advance by the Committee in all cases, whether the services are provided to the Company or to any other company of the group, and the audit and compliance committee of the country subholding company of the group, if the services are provided thereto or to one of its subsidiaries that does not have its own audit and compliance committee; or the audit and compliance committee of the subsidiary to which the services are provided, if it has one.

- In order to authorise the provision of said services, the Committee must assess whether the audit firm is the most appropriate firm to provide them based on its experience and expertise, analysing the nature thereof and the circumstances and context in which it occurs; the status, position or influence of the provider of the service and other relations thereof with the Company; the effects thereof; and whether said services could threaten the independence of the auditor and, if applicable, the establishment of measures eliminating or reducing the threats to a level that does not compromise the independence thereof.

In compliance with recommendation 65.c) of Technical Guide 3/2017 on Audit Committees of Public Interest Entities, the Committee has established the indicative limit of the fees that may be received by the Auditor or an entity within its network at five million euros per year for non-audit services provided to the Company and to any other entity of its group during any financial year of the Company.

As regards financial year 2022:

- Iberdrola’s Auditor, “KPMG Auditores, S.L.” (“KPMG”), appeared on sixteen occasions before the Committee and on one occasion before the Board of Directors to report on issues relating to the audit of accounts. During these appearances, KPMG did not report issues that might put its independence at risk.

- On 21 February 2022 KPMG sent to the Committee written confirmation of its independence with regard to the audit of the financial information for financial year 2021.

- On 22 July 2022 KPMG sent to the Committee written confirmation of its independence with regard to the limited review of the financial information as at 30 June 2022.
On 20 February 2023 KPMG sent to the Committee written confirmation of its independence with regard to the audit of the financial information for financial year 2022.

In these letters the Auditor stated that it has implemented policies and procedures designed to provide reasonable assurance that KPMG and its personnel maintain their independence when so required by applicable legal provisions.

Pursuant to the foregoing, the hiring of the Auditor for non-audit services was approved in advance by the Committee. Prior to approval thereof, the director of the Internal Audit Area, and if necessary the audit committee and the internal audit division of the group company receiving the services (or of any country subholding company to which it belongs) stated that the provision thereof did not threaten the independence of the auditor. In requests for services made by the Committee, the Auditor confirmed that, among other things, there were no restrictions on independence for the performance of the work described therein.

In its statement of independence dated 20 February 2023, KPMG reported that 3 of its professionals were hired by the Iberdrola group during 2022. It also confirmed in this statement that such hirings do not fall within any of the prohibitions set out in the applicable legal provisions and have not created a threat compromising their independence as auditors.

On 20 February 2023 the Committee submitted its report to the Board of Directors regarding the independence of the Iberdrola's Auditor, in which it concluded that the Auditor performed its work independently.

MECHANISMS TO PRESERVE THE INDEPENDENCE OF FINANCIAL ANALYSTS, INVESTMENT BANKS AND RATING AGENCIES

The principles underlying the Company’s relationship with financial analysts, investment banks and rating agencies are set out in the Policy regarding Communication and Contacts with Shareholders, Institutional Investors and Proxy Advisors, and include transparency, truthfulness, promptness, clarity, symmetry and respect for the principle of equality in the dissemination of information, implementation of a general communication strategy for financial, non-financial and corporate information, which contributes to maximising the dissemination and the quality of the information available to the market, to investors and to other Stakeholders, development of information-technology tools that allow the Company to capitalise on new technologies, and compliance with the provisions of law and the Governance and Sustainability System, as well as with the principles of cooperation and transparency with all competent authorities, regulators and government agencies.

The Finance, Control and Corporate Development Division manages requests for information from financial analysts, investment banks and rating agencies, as well as institutional and individual investors, through the Investor Relations Division, and gives mandates to investment banks.

The independence of financial analysts is protected by the Investor Relations Division, which ensures the objective, fair and non-discriminatory treatment thereof.

The Company also has a number of communication channels:

- Personalised assistance for analysts, investors and rating agencies.
- Publication of the information relating to quarterly results and other specific events, such as those relating to the submission of the Business Outlook or to corporate transactions.
- E-mail through the corporate website (accionistas@iberdrola.com).
- Toll-free line for shareholders (+34 900 100 019).
- In-person and broadcasted presentations.
- Release of announcements and news.
C.1.31 Indicate whether the company changed its external auditor during the year. If so, identify the incoming and outgoing auditors:

[ ] Yes [ X ] No

If there were any disagreements with the outgoing auditor, explain their content:

[ ] Yes [ X ] No

C.1.32 Indicate whether the audit firm performs any non-audit work for the company and/or its group and, if so, state the amount of fees it received for such work and express this amount as a percentage of the total fees invoiced to the company and/or its group for audit work:

[ X ] Yes [ ] No

<table>
<thead>
<tr>
<th>Company</th>
<th>Group companies</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amount invoiced for non-audit services (thousands of euros)</td>
<td>1,521</td>
<td>1,753</td>
</tr>
<tr>
<td>Amount invoiced for non-audit work/Amount for audit work (in %)</td>
<td>44.84</td>
<td>7.66</td>
</tr>
</tbody>
</table>

See annex to this report.

C.1.33 Indicate whether the auditors’ report on the financial statements for the preceding year contains a qualified opinion or reservations. If so, indicate the reasons given to shareholders at the general meeting by the chairman of the audit committee to explain the content and extent of the qualified opinion or reservations.

[ ] Yes [ X ] No

C.1.34 Indicate the number of consecutive years for which the current audit firm has been auditing the company's individual and/or consolidated financial statements. Also, indicate the number of years audited by the current audit firm as a percentage of the total number of years in which the financial statements have been audited:

<table>
<thead>
<tr>
<th>Number of consecutive years</th>
</tr>
</thead>
<tbody>
<tr>
<td>Individual</td>
</tr>
<tr>

</tbody>
</table>
C.1.35 Indicate whether there is a procedure for directors to be sure of having the information necessary to prepare the meetings of the governing bodies with sufficient time; provide details if applicable:

[X] Yes    [ ] No

Details of the procedure

The Regulations of the Board of Directors provide that the required support shall be provided for new directors to become rapidly and adequately acquainted with the Company and the Iberdrola group, such that they can actively perform their duties as such and, if so appointed, as members of any of the committees of the Board of Directors as from their appointment as such. To this end, an orientation programme is made available to them through the directors’ website referred to below.

All directors are provided with the information needed to perform their duties, and access to training materials and sessions that allow them to continuously update their knowledge is encouraged.

Moreover, as regards the members of the consultative committees, the corresponding regulations provide that said committees must have a periodic training plan that ensures the refreshment of knowledge relating to the purview of each of them.

In order to improve their knowledge of the Iberdrola group, presentations are made to the directors regarding the various businesses. In addition, a portion of each meeting of the Board of Directors tends to be dedicated to a presentation on economic, legal or political/social issues of importance to the Iberdrola group.

The directors have access to a specific application, the directors’ website, that facilitates performance of their duties and the exercise of their right to receive information. This website includes information deemed appropriate for preparation of the meetings of the Board of Directors and the committees thereof in accordance with the agenda, the training materials intended for the directors, and presentations made to the Board of Directors.

In addition, the directors are given access through the directors’ website to the minutes of the meetings of the Board of Directors and the committees thereof, as well as such other information as the Board of Directors approves.

Finally, the Regulations of the Board of Directors provide that the directors are required to properly prepare for the meetings of the Board of Directors and, if applicable, the meetings of the Executive Committee or of the consultative committees of which they are members, for which purposes the directors must diligently become apprised of the running of the Company and the matters to be discussed at such meetings.

C.1.36 Indicate whether the company has established rules obliging directors to inform the Board of any circumstances, whether or not related to their actions in the company itself, that might harm the company’s standing and reputation, tendering their resignation where appropriate. If so, provide details:

[X] Yes    [ ] No
The Regulations of the Board of Directors set out the obligations and duties of the directors, including, as an expression of the duty of loyalty, the obligation to submit their resignation to the Board of Directors in the event that supervening circumstances mean they are involved in an instance of disqualification or prohibition or loss of suitability, respectability, capability, competence, availability or commitment to their duties required to be a director and the other instances provided for in the Governance and Sustainability System.

A director must inform the Company of any judicial, administrative or other proceedings instituted against the director which, because of the significance or nature thereof, may seriously affect the reputation of the Company. In particular, every director must inform the Company, through the secretary of the Board of Directors, in the event that the director is subject to an investigation, arrested, or an order for the commencement of an oral criminal trial is issued against the director for the commission for any crime, and of the occurrence of any significant procedural steps in such proceedings. In such instances, the Board of Directors shall review this circumstance as soon as practicable and, following a report of the Appointments Committee, shall adopt the decisions it deems fit taking into account the interests of the Company.

In addition, the director must inform the Company of any fact or event that may be relevant to the holding of office as a director.

Directors must also submit their resignation to the Board of Directors and formally resign from their position in the events described in section C.1.19 of this report.

C.1.37 Indicate whether, apart from such special circumstances as may have arisen and been duly minuted, the Board of Directors has been notified or has otherwise become aware of any situation affecting a director, whether or not related to his or her actions in the company itself, that might harm the company’s standing and reputation:

[ ] Yes
[ X ] No

Indicate whether the Board of Directors has examined the case. If so, explain with reasons whether, given the specific circumstances, it has adopted any measure, such as opening an internal enquiry, requesting the director's resignation or proposing his or her dismissal.

Indicate also whether the Board decision was backed up by a report from the nomination committee.

[ ] Yes
[ X ] No

<table>
<thead>
<tr>
<th>Decision / action taken</th>
<th>Reasoned explanation</th>
</tr>
</thead>
</table>
Appropriate investigations have been carried out in compliance with the provisions of the Governance and Sustainability System and the Compliance System of the Company.

The Board of Directors of the Company has examined the case and unanimously confirmed its full confidence in the suitability of the affected directors (Mr. José Ignacio Sánchez Galán and the new ex-director Mr. Francisco Martínez Córcoles) to hold office, which has been shown by the court proceeding, in which a final and conclusive dismissal has been granted in respect of both of them.

In recent months, the issues regarding the hiring of “Club Exclusivo de Negocios y Transacciones, S.L.” (CENYT) by the Company and Iberdrola Renovables, S.A.U. have been favourably resolved for the two aforementioned companies and the majority of the directors and employees involved in the process.

Currently, and on a final basis, no company of the Iberdrola group is under investigation in said proceeding, in which the dismissal (also final) of the investigation of the executive chairman of the Company and of the other directors and members of the management team (both former and current) who were under investigation has been confirmed, except for a former head of the security area of the Company (no longer associated therewith), who continues to be under investigation.

All of the foregoing confirms that the competent bodies of the Company acted properly. From the day after the appearance of the first news reports in June 2018 regarding the hiring of CENYT, the Company carried out various investigations in accordance with its Governance and Sustainability System and its Compliance System, which define and describe the powers assigned to the various companies of the Iberdrola group and their corresponding governance bodies – particularly, the Audit and Risk Supervision Committee, the Sustainable Development Committee, the Executive Committee and the Board of Directors of the Company, as well as the Board of Directors of “Iberdrola Renovables Energía, S.A.” (Sociedad Unipersonal).

The content of the meetings of these bodies reflects the impetus given to all of the internal investigations performed, the supervision of the performance thereof without any limitation in scope, and the assurance that all responsible areas had the required human and material resources and acted free of any type of interference.

These investigations included all available documentary evidence.

Iberdrola’s Compliance Unit was advised by “PricewaterhouseCoopers Asesores de Negocio, S.L.” (“PwC Asesores”), which performed an independent investigation, with neither supervision nor control by internal bodies or outside lawyers, and which made and fulfilled a commitment to make its findings available to the judicial authorities, whatever those findings might be (PwC Asesores has dedicated more than 5,000 working hours, processed 5.14 terabytes of information and reviewed more than 300,000 files and more than 3,000 invoices).

The final conclusions of the investigation carried out by the Central Preliminary Examining Court number 6 of the National High Court coincide with the analysis carried out by various international law firms, which reviewed various aspects of the proceeding, including Iberdrola’s Compliance System, the reaction to this matter by the governing bodies of the companies of the Iberdrola group participating therein, the internal investigation procedure and the results thereof (including the forensic report of PwC Asesores), and documentation relating to the various investigative actions taken in the aforementioned legal proceeding. Their conclusion is that there was insufficient evidence to pursue a criminal case against any company of the Iberdrola group or against any of its current directors or members of the management team.

In short, as both the Central Preliminary Examining Court and the Criminal Chamber of the National High Court have noted, the robustness of the Company’s Governance and Sustainability System and Compliance System and their suitability for preventing criminal offences have been key to showing the absence of criminal liability of the companies that hired CENYT and their directors and officers, rendering the conduct merely individual. The suitability and effectiveness of the model have therefore been proven and reinforced.

Notwithstanding the clarity of the court rulings that have been issued in the process, the lengthiness of the aforementioned legal proceeding and the profusion of accusations and arguments lacking factual and legal support have been used by some competitors and one former employee of the Company for the clear purpose of harming its good name and reputation and ultimately undermining its ability to compete in the market.

Therefore, the Company has taken and will continue to take appropriate legal measures to protect its reputation and its ability to compete.
C.1.38 Detail any material agreements entered into by the company that come into force, are modified or are terminated in the event of a change in control of the company following a public takeover bid, and their effects.

At 31 December 2022 there are bonds issued by companies of the Iberdrola group, as well as loans and other agreements with financial institutions, the maturity of which could be affected or which would require additional security in the event of a change of control of the Company in accordance with the terms of each contract, the most significant of which are listed below:

- Bond issues in the amount of €12,053 million in the European market and US$350 million (equivalent to €329 million) in the U.S. market.
- Loans arranged with the European Investment Bank and with the Official Credit Institute, totalling €4,476 million.
- Bank and export credit agency loans in the amount of €2,430 million and US$900 million (equivalent to €846 million).
- Bond issues amounting to R$14,707 million (equivalent to €2,621 million) and loans amounting to R$26,713 million (equivalent to €4,761 million) corresponding to the country subholding company “Neoenergia S.A.” and its subsidiaries.

C.1.39 Identify individually as regards directors, and in aggregate form in other cases, and provide details of any agreements between the company and its directors, executives or employees containing indemnity or golden parachute clauses in the event of resignation or dismissal without due cause or termination of employment as a result of a takeover bid or any other type of transaction.

| Executive directors and officers | 1. EXECUTIVE DIRECTORS  
Pursuant to the provisions of his contract, the executive chairman has the right to receive a severance payment in the event of termination of his relationship with the Company, as well as to termination of contract and severance in the event of removal or reduction of his duties, provided that these situations are not a result of a breach attributable thereto or exclusively due to his own decision to withdraw. The amount of the severance payment is three times annual salary in these cases.  
Since 2011, contracts with new executive directors and with senior management include maximum severance pay equal to two times annual salary in the event of termination of their relationship with the Company, provided that termination of the relationship is not the result of a breach attributable thereto or solely due to a voluntary decision thereof. In this regard, the contract with the chief executive officer provides for a severance payment of two years’ salary, including any compensation that may be payable to him under the post-contractual non-competition undertaking.  
Furthermore, in consideration for the executive chairman's non-compete commitment for a period of two years, he will be entitled to severance pay equal to the remuneration for such period. |
| 2. OFFICERS  
The employment contracts of officers of Iberdrola who, given their responsibilities, decisively contribute to the creation of value, contain specific clauses on severance payments. The purpose of such clauses is to obtain an effective and sufficient level of loyalty for the management of the Company and thus avoid a loss of experience and knowledge that might jeopardise the achievement of strategic objectives. The amount of the severance pay is determined based on length of service and the reasons for the officer’s cessation of office, up to a maximum of five times annual salary.  
Notwithstanding the foregoing, the Senior Management Remuneration Policy provides since 2011 that the limit on the amount of the severance pay under new contracts with the members of senior management shall be two times their annual salary. |

Indicate whether, beyond the cases established by legislation, these agreements have to be communicated and/or authorised by the governing bodies of the company or its group. If so, specify the procedures, the cases concerned and the nature of the bodies responsible for their approval or communication:

% of executive directors 33.33
% of proprietary directors 0.00
% of independent directors 66.67
% of other external directors 0.00

Explain the functions delegated or assigned to this committee, other than those that have already been described in Section C.1.9, and describe the rules and procedures for its organisation and functioning. For each of these functions, briefly describe its most important actions during the year and how it has exercised in practice each of the functions assigned to it by law, in the articles of incorporation or in other corporate resolutions.

The Executive Committee is assigned all the powers of the Board of Directors, except for those powers that may not be delegated pursuant to legal or by-law restrictions.

It must be composed of a minimum of four and a maximum of eight members, of which at least two must be non-executive, at least one of which must be an independent director. In all events, the chairman of the Board of Directors and the chief executive officer are members of this committee, and the secretary of the Board of Directors acts as secretary thereof. The appointment of its members and the permanent delegation of powers thereto is carried out by the Board of Directors with the favourable vote of at least two-thirds of the members thereof.

A director who is appointed as a member of the Executive Committee shall serve for the unexpired portion of such director’s term of office, without prejudice to the Board of Directors’ power of revocation. In the event that a member of the Executive Committee is re-elected as director, such member shall only continue to serve as a member of the Executive Committee if expressly re-elected as such by resolution of the Board of Directors.

It shall meet as many times as deemed necessary by the chair thereof. It must also meet when so requested by a minimum of two of its members.

A valid quorum shall be established with the attendance at the meeting, in person or by proxy, of at least a majority of its members, and resolutions shall be adopted by an absolute majority of the members present at the meeting in person or by proxy.

Its duties consist of making proposals to the Board of Directors regarding strategic decisions, investments and divestitures that are significant for the Company or the Iberdrola group, assessing their conformity to the current budget and strategic plans and analysing and monitoring business risks. It also provides
assistance to the Board of Directors in the ongoing supervision of compliance with the principles governing the organisation and coordination of the Iberdrola group’s companies and the strategic goals thereof.

The most significant activities performed by the Executive Committee during financial year 2022, which are described in the Activities Report of the Board of Directors and of the Committees thereof that is published for purposes of the call to the General Shareholders’ Meeting (https://www.iberdrola.com/corporate-governance/general-shareholders-meeting/documents), are set forth below:

- Monitoring of the Outlook 2020-2025 and analysis of the foundations for the definition of the Strategic Plan 2023-2025.
- Monitoring of the process of specification and implementation of the Next Generation EU plan and of the Iberdrola group’s portfolio of projects related thereto.
- Impacts arising from the Russia-Ukraine conflict and monitoring of proposals for regulatory measures in response thereto.
- Monitoring of changes in the energy regulatory environment, including, inter alia, the various industry regulations adopted or in the process of being approved in the European Union, Spain and Portugal, and the reform of the Electricity Industry Law in Mexico, as well as the ruling of the Mexican Supreme Court on the action challenging the constitutionality of this reform.
- Analysis of current issues in the energy sector in Spain, including decarbonisation and electrification as challenges and opportunities.
- Identification of the main risks in each country for financial year 2023 within the framework of the exposure of the strategic lines and the preliminary bases of the Iberdrola group’s consolidated budget for financial year 2023.
- Monitoring of implementation of the budget for 2022.
- Acknowledgement and authorisation of the reorganisation of the Iberdrola group’s businesses in Spain.
- Monitoring of the process of adapting the Iberdrola group’s payroll structure to the strategy defined in Outlook 2020-2025 and outlook for the 2023-2025 period.

Monitoring of the participation in the Davis World Economic Forum, the European Round Table for Industry and the UN Climate Change Conference (COP27).

Explain the functions assigned to this committee, including where applicable those that are additional to those prescribed by law, and describe the rules and procedures for its organisation and functioning. For each of these functions, briefly describe its most important actions during the year and how it has exercised in practice each of the functions assigned to it by law, in the articles of incorporation or in other corporate resolutions.
The Audit and Risk Supervision Committee is an internal informational and consultative body.

The Committee shall be composed of a minimum of three and a maximum of five directors appointed by the Board of Directors upon a proposal of the Appointments Committee, from among the non-executive directors who are not members of the Executive Committee. A majority of its members shall be independent, and at least one of them shall be appointed taking into account the knowledge and experience thereof in the areas of accounting, audit and risk management.

Without prejudice to the foregoing, the Board of Directors and the Appointments Committee shall endeavour to ensure that the members of the Audit and Risk Supervision Committee as a whole, and especially the chair thereof, have the expertise, qualifications and experience appropriate for the duties they are called upon to perform in the area of accounting, auditing and management of risks, both financial and non-financial, that at least one of them has experience in information technology, and that as a whole the members of the Audit and Risk Supervision Committee have relevant technical knowledge in the finance and internal control area, as well as in relation to the energy sector.

The Board of Directors shall appoint a chair of the Audit and Risk Supervision Committee from among the independent directors forming part thereof, who must be a director with sufficient capacity and availability to provide greater dedication to the committee than the rest of the members thereof. It shall also appoint its secretary, who need not be a director.

Its members shall be appointed for a maximum term of four years and may be re-elected on one or more occasions for terms of the same maximum length. The position of chair shall be held for a maximum period of four years, after which period the chair may not be re-elected until the passage of at least one year from ceasing to act as such, without prejudice to the continuance or re-election thereof as a member of the Committee.

A valid quorum shall be established with the attendance at the meeting, in person or by proxy, of a majority of its members, and resolutions shall be adopted by an absolute majority of votes of the members present at the meeting in person or by proxy.

Its duties are governed by and further developed in the Regulations of the Board of Directors, as well as in the Regulations of the Audit and Risk Supervision Committee, and entail the issuance of reports and proposals mainly concerning financial information, non-financial information, internal control systems, control and risk management systems, the Internal Audit Area and the statutory auditor.

The most significant activities performed by the Audit and Risk Supervision Committee during financial year 2022, which are described in the Activities Report of the Board of Directors and of the Committees thereof that is published for purposes of the call to the General Shareholders’ Meeting (https://www.iberdrola.com/corporate-governance/general-shareholders-meeting/documents), are set forth below:

- Memorandum of internal control recommendations resulting from the financial information audit of financial year 2021 and implementation of said recommendations.
- Analysis of the alternative performance measures included in the annual financial statements and in the directors’ reports for financial year 2021.
- Preliminary information on potential impact of the energy crisis in various countries where companies of the Iberdrola group operate.
- Monitoring of the involvement of the statutory auditor in the analysis of Iberdrola’s Climate Action Plan.
- Specific meeting on risk policies: process for updating risks and update on “risk appetite”.
- Tax compliance management systems. UNE 19602 standard. Communication of the satisfactory result of the annual audit by the certification agency AENOR, as well as the independent expert report performed by an external consultant.
- Submission to the Spanish Tax Administration Agency of the Annual Tax Transparency Report for companies adhering to the Good Tax Practices Code. Acknowledgement of the congratulatory letter from the Tax Agency highlighting the willingness and facilities offered by Iberdrola for the review of the report, as well as the voluntary exercise in transparency.

Furthermore, section C.1.30 and the annex to this report describe the duties performed by the Audit and Risk Supervision Committee during financial year 2022 in relation to the provision of non-audit services by the auditor.

Identify the directors who are members of the audit committee and have been appointed taking into account their knowledge and experience in accounting or audit matters, or both, and state the date on which the Chairperson of this committee was appointed.

Explain the functions assigned to this committee, including where applicable those that are additional to those prescribed by law, and describe the rules and procedures for its organisation and functioning. For each of these functions, briefly describe its most important actions during the year and how it has exercised in practice each of the functions assigned to it by law, in the articles of incorporation or in other corporate resolutions.

The Appointments Committee is an internal informational and consultative body.

It shall be composed of a minimum of three and a maximum of five directors appointed by the Board of Directors upon a proposal of the Appointments Committee, from among the non-executive directors. A majority of its members must be classified as independent. The Board of Directors is to appoint the chair from among the independent directors.

The Board of Directors shall endeavour to ensure that the members of the Appointments Committee have such expertise, qualifications and experience as are required by the duties they are called upon to perform, particularly in the following areas: corporate governance, strategic human resources analysis and
evaluation, selection of directors and management personnel, and performance of senior management duties.

Its members shall be appointed for a maximum term of four years and may be re-elected on one or more occasions for terms of the same maximum length.

The Board of Directors shall appoint a chair of the Appointments Committee from among the independent directors forming part thereof, who must be a director with sufficient capacity and availability to provide greater dedication to the committee than the rest of the members thereof. It shall also appoint its secretary, who need not be a director.

A valid quorum shall be established with the attendance at the meeting, in person or by proxy, of a majority of its members, and resolutions shall be adopted by an absolute majority of votes of the members present at the meeting in person or by proxy.

Its duties are further developed in the Regulations of the Board of Directors, as well as in the Regulations of the Appointments Committee, and entail the issuance of reports and proposals mainly concerning the appointments of members of the Board of Directors, of its committees and of the Company’s Senior Management.

The most significant activities performed by the Appointments Committee during financial year 2022, which are described in the Activities Report of the Board of Directors and of the Committees thereof that is published for purposes of the call to the General Shareholders’ Meeting (https://www.iberdrola.com/corporate-governance/general-shareholders-meeting/documents), are set forth below:

- Review of the Board of Directors Diversity and Member Selection Policy and verification of compliance therewith.
- Proposal for the separation of the positions of chairman of the Board of Directors and CEO and resulting appointment of Mr Armando Martínez Martínez as chief executive officer.
- Proposal for the re-election of Ms María Ángeles Alcalá Díaz, Ms Isabel García Tejerina and Mr Anthony L. Gardner, as independent directors.

Proposals for appointment of Mr Armando Martínez Martínez as a member of the Executive Committee, as well as Mr Ángel Acebes Paniagua as chair and Ms María Helena Antolín Raybaud as a member of the Appointments Committee; and re-election of Mr Anthony L. Gardner as a member of the Executive Committee and Mr Manuel Moreu Munaiz as a member of the Remuneration Committee.

- Reports on the classification of directors and on the reclassification of Ms María Helena Antolín Raybaud as other external.
- Report to the Board of Directors on the chairman’s proposal for the appointment of a new secretary to the Board of Directors.
- Report to the Board of Directors regarding the proposal to appoint Mr Agustín Delgado Martín as a member of the Company’s Senior Management.
- Report on the appointment of Ms Solange María Pinto Ribeiro as a member of the Compliance Unit.

Explain the functions assigned to this committee, including where applicable those that are additional to those prescribed by law, and describe the rules and procedures for its organisation and functioning. For each of these functions, briefly describe its most important actions during the year and how it has exercised in practice each of the functions assigned to it by law, in the articles of incorporation or in other corporate resolutions.

The Remuneration Committee is an internal informational and consultative body.

It shall be composed of a minimum of three and a maximum of five directors appointed by the Board of Directors upon a proposal of the Appointments Committee, from among the non-executive directors. A majority of its members must be classified as independent. The Board of Directors is to appoint the chair from among the independent directors.

The Board of Directors shall endeavour to ensure that the members of the Remuneration Committee have such expertise, qualifications and experience as are required by the duties they are called upon to perform, and particularly regarding corporate governance, policy design and remuneration plans for directors and senior management.

Its members shall be appointed for a maximum term of four years and may be re-elected on one or more occasions for terms of the same maximum length.

The Board of Directors shall appoint a chair of the Remuneration Committee from among the independent directors forming part thereof, who must be a director with sufficient capacity and availability to provide greater dedication to the committee than the rest of the members thereof. It shall also appoint its secretary, who need not be a director.

A valid quorum shall be established with the attendance at the meeting, in person or by proxy, of a majority of its members, and resolutions shall be adopted by an absolute majority of votes of the members present at the meeting in person or by proxy.

Its duties are further developed in the Regulations of the Board of Directors, as well as in the Regulations of the Remuneration Committee, and entail the issuance of reports and proposals mainly concerning the remuneration of members of the Board of Directors and of the Company’s Senior Management.

The most significant activities performed by the Remuneration Committee during financial year 2022, which are described in the Activities Report of the Board of Directors and of the Committees thereof that is published for purposes of the call to the General Shareholders’ Meeting (https://www.iberdrola.com/corporate-governance/general-shareholders-meeting/documents), are set forth below:

- Acknowledgement of new developments in the area of remuneration transparency incorporated in the annual reports.
- Information on the analysis of measures to encourage favourable voting on the Annual Director Remuneration Report, with the participation of an independent expert.
- Internal comparative analysis of the remuneration of executive directors.
- Calculation of the annual variable remuneration of the executive chairman for his performance in financial year 2021 based on a report evaluating the achievement of targets prepared by an independent external adviser.

www.iberdrola.com
- Report to the Board of Directors regarding confirmation of eligibility for the delivery of shares corresponding to the third tranche of the payment of the 2017-2019 Strategic Bonus.
- Proposed fixed remuneration of directors for 2022.
- Parameters for calculation of the annual variable remuneration of executive directors for their performance in 2022.
- Favourable report and referral to the Board of Directors of the executive chairman's proposals regarding the remuneration structure of the new CEO and the terms of his contract.
- Report on director liability insurance.
- Verification of compliance with the objectives for financial year 2021 and report on the proposed calculation of the variable remuneration of the members of senior management for that year.
- Report on the proposed benchmark objectives for the 2022 variable remuneration of senior management.

Explain the functions delegated or assigned to this committee, other than those that have already been described in Section C.1.9, and describe the rules and procedures for its organisation and functioning. For each of these functions, briefly describe its most important actions during the year and how it has exercised in practice each of the functions assigned to it by law, in the articles of incorporation or in other corporate resolutions.

The Sustainable Development Committee is an internal informational and consultative body.

It shall be composed of a minimum of three and a maximum of five directors appointed by the Board of Directors upon a proposal of the Appointments Committee, from among the non-executive directors. A majority of its members must be classified as independent.

Its members shall be appointed for a maximum term of four years and may be re-elected on one or more occasions for terms of the same maximum length.

The Board of Directors shall appoint a chair of the Sustainable Development Committee from among the independent directors forming part thereof, who must be a director with sufficient capacity and availability to provide greater dedication to the committee than the rest of the members thereof. It shall also appoint its secretary, who need not be a director.

A valid quorum shall be established with the attendance at the meeting, in person or by proxy, of a majority of its members, and resolutions shall be adopted by an absolute majority of votes of the members present at the meeting in person or by proxy.
Its duties are further developed in the Regulations of the Board of Directors, as well as in the Regulations of the Sustainable Development Committee, and entail the issuance of reports and proposals mainly concerning governance, sustainability, compliance and corporate reputation.

The most significant activities performed by the Sustainable Development Committee during financial year 2022, which are described in the Activities Report of the Board of Directors and of the Committees thereof that is published for purposes of the call to the General Shareholders’ Meeting (https://www.iberdrola.com/corporate-governance/general-shareholders-meeting/documents), are set forth below:

- Monitoring of the main developments in the taxonomy of non-financial information.
- Monitoring of work on the circular economy and climate governance.
- Analysis of elements for systematic measurement of and tools for measuring ESG and corporate social responsibility.
- Review of the General Sustainable Development Policy, the Stakeholder Engagement Policy and the environmental and social policies.
- Presentation and report to the Board of Directors of the new Biodiversity Plan 2030.
- Review of the level of implementation of the Sustainable Development Plan 2020-2022 and reputational aspects of relevant issues.

C.2.3 Indicate, where applicable, the existence of any regulations governing Board committees, where these regulations are to be found, and any amendments made to them during the year. Also indicate whether any annual reports on the activities of each committee have been voluntarily prepared.

The committees of the Board of Directors are governed by the Regulations of the Board of Directors. Each of the consultative committees also has its own regulations. These regulations are available on the Company’s corporate website at the following link: https://www.iberdrola.com/corporate-governance/governance-sustainability-system/corporate-governance-policies.
The Activities Report of the Board of Directors and of the Committees thereof (https://www.iberdrola.com/shareholders-investors/annual-reports), which reports the composition thereof, the number of meetings held during the year, the attendance of its members and appearances at these meetings, as well as the key issues dealt with and the priorities for the following year, is also published on this website.

As part of the process of ongoing review of the Governance and Sustainability System, in addition to certain technical improvements and the inclusion in the regulations of all the consultative committees of the changes arising from the separation of executive positions and the appointment of a new chief executive officer, the following amendments, among others, have been made: (i) in the Regulations of the Appointments Committee, its powers have been updated regarding the appointment of outside directors at companies of the Iberdrola group and the term “human capital” has been included to include and showcase the skills and abilities of the professionals of the Iberdrola group’s companies, as a concept unto itself and different than the term human resources, which mainly refers to the management of these professionals; and (ii) in the Regulations of the Sustainable Development Committee, its powers have been expanded, especially the new function of reporting on the measures and procedures adopted within the Iberdrola group to implement and monitor the provisions of the Policy on Respect for Human Rights, and the power relating to the issuance of the report on the performance of the Compliance Director has been contextualised, contemplating the circumstance in which the Compliance Director might be considered a member of senior management.
D RELATED PARTY AND INTRAGROUP TRANSACTIONS

D.1. Explain, where appropriate, the procedure and competent bodies relating to the approval of transactions with related and intragroup parties, indicating the criteria and general internal rules of the entity that regulate the abstention obligations of the affected directors or shareholders. Detail the internal information and periodic control procedures established by the company in relation to those related-party transactions whose approval has been delegated by the board of directors.

Pursuant to the Regulations of the Board of Directors, Related-Party Transactions means those transactions carried out by the Company or its subsidiaries with directors, with shareholders holding 10% or more of the voting rights or who have proposed or caused the appointment of any of the directors, or with any other parties who should be considered parties related to the Company in accordance with International Accounting Standards.

As an exception to the preceding paragraph, transactions that are not classified as such in accordance with the law, and particularly those identified in section 2 of Article 48 of the Regulations of the Board of Directors, shall not be deemed Related-Party Transactions.

The approval of Related-Party Transactions must be decided by the shareholders at a General Shareholders’ Meeting in the instances provided by law, and particularly if it relates to a transaction having a value of more than 10% of the total items of the assets of the Iberdrola group according to the last consolidated annual balance sheet approved by the shareholders at the General Shareholders’ Meeting of the Company.

Other Related-Party Transactions are subject to the approval of the Board of Directors. However, Related-Party Transactions may be approved by the Executive Committee due to the urgency of the matter, giving notice thereof at the next meeting of the Board of Directors in order for them to be ratified.

The Board of Directors, through the Audit and Risk Supervision Committee (the “Committee”), shall endeavour to ensure that Related-Party Transactions are fair and reasonable from the viewpoint of the Company and, if applicable, of shareholders other than the related party. As provided by law, the approval of Related-Party Transactions must be the subject of a prior report of the Committee, which shall verify compliance with said requirements.

The Board of Directors may delegate the approval of Related-Party Transactions when so allowed by law, and particularly those transactions that simultaneously satisfy the following three conditions: (i) that they are conducted under contracts whose terms and conditions are standardised and apply on an across-the-board basis to a large number of customers; (ii) that they are conducted at prices or rates established generally by the party acting as supplier of the goods or services in question; and (iii) that the amount thereof does not exceed 0.5% of the consolidated net turnover of the Iberdrola group according to the last consolidated annual financial statements approved by the shareholders at the Company’s General Shareholders’ Meeting.

The approval of the aforementioned Related-Party Transactions, particularly those relating to electricity and gas services, shall not require a prior report of the Committee. The Board of Directors has established a regular internal reporting and control procedure in relation to those transactions exceeding €20,000 on an annual basis (calculated based on standard market rates) or that have not been executed exclusively through the ordinary commercial channels of the Iberdrola group, in which procedure the Committee must participate, which shall verify the fairness and transparency of such transactions and compliance with any legal criteria applicable to the corresponding exceptions. The execution of these types of transactions is the responsibility of the representatives of the group company in question. The Committee, with the assistance of the Internal Audit Area and with the information provided for this purpose by the Office of the Secretary of the Board and the Compliance Unit, shall examine these types of Related-Party Transactions each year and shall submit the corresponding report to the Board of Directors.
In the case of customary or recurring Related-Party Transactions in the ordinary course of business, it shall be sufficient to give a generic prior approval of the kind of transaction and of the conditions for performance thereof, provided that they are transactions with the same counterparty and their object is homogeneous. The Board of Directors is responsible for approving the various lines of transactions. In relation to the lines of transactions, the Committee, with the assistance of the Internal Audit Area, must issue an annual report to be submitted to the Board of Directors verifying compliance with the conditions established by the Board of Directors when approving the lines of transactions in question.

If a Related-Party Transaction entails the successive performance of different transactions, of which the second and subsequent transactions are mere acts of execution of the first transaction, the provisions of this section shall only apply to the first transaction carried out.

The execution of a Related-Party Transaction puts the director who engages in said transaction or is related to the person engaging in the transaction in a conflict of interest, for which reason the duty to abstain in the deliberation and voting on the approval resolution shall apply.

The Company shall publicly announce Related-Party Transactions no later than the time of execution thereof in the cases, to the extent and in the manner prescribed by law.

The Company shall also report Related-Party Transactions in the half-yearly financial report, in the annual corporate governance report, and in the notes to the annual financial statements.

In any event, directors must give written notice to the secretary of the Board of Directors, on a half-yearly basis, regarding the Related-Party Transactions in which they or persons connected to the Company and related to such directors have engaged.

**D.2** Give individual details of operations that are significant due to their amount or of importance due to their subject matter carried out between the company or its subsidiaries and shareholders holding 10% or more of the voting rights or who are represented on the board of directors of the company, indicating which has been the competent body for its approval and if any affected shareholder or director has abstained. In the event that the board of directors has responsibility, indicate if the proposed resolution has been approved by the board without a vote against the majority of the independents:

<table>
<thead>
<tr>
<th>Name or company name of the shareholder or any of its subsidiaries</th>
<th>% Shareholding</th>
<th>Amount (thousands of euros)</th>
<th>Approving body</th>
<th>Identity of the significant shareholder or director who has abstained</th>
<th>The proposal to the board, if applicable, has been approved by the board without a vote against a majority of independents</th>
</tr>
</thead>
<tbody>
<tr>
<td>No data</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Name or company name of the shareholder or any of its subsidiaries</th>
<th>Nature of the relationship</th>
<th>Type of operation and other information required for its evaluation</th>
</tr>
</thead>
<tbody>
<tr>
<td>No data</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
D.3. Give individual details of the operations that are significant due to their amount or relevant due to their subject matter carried out by the company or its subsidiaries with the administrators or managers of the company, including those operations carried out with entities that the administrator or manager controls or controls jointly, indicating the competent body for its approval and if any affected shareholder or director has abstained. In the event that the board of directors has responsibility, indicate if the proposed resolution has been approved by the board without a vote against the majority of the independents:

<table>
<thead>
<tr>
<th>Name or company name of the administrators or managers or their controlled or jointly controlled entities</th>
<th>Name or company name of the company or entity within its group</th>
<th>Relationship</th>
<th>Amount (thousands of euros)</th>
<th>Approving body</th>
<th>Identity of the significant shareholder or director who has abstained</th>
<th>The proposal to the board, if applicable, has been approved by the board without a vote against by a majority of independents</th>
</tr>
</thead>
<tbody>
<tr>
<td>No data</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Name or company name of the administrators or managers or their controlled or jointly controlled entities</th>
<th>Nature of the operation and other information necessary for its evaluation</th>
</tr>
</thead>
<tbody>
<tr>
<td>No data</td>
<td></td>
</tr>
</tbody>
</table>

D.4. Report individually on intra-group transactions that are significant due to their amount or relevant due to their subject matter that have been undertaken by the company with its parent company or with other entities belonging to the parent's group, including subsidiaries of the listed company, except where no other related party of the listed company has interests in these subsidiaries or that they are fully owned, directly or indirectly, by the listed company.

In any case, report any intragroup transaction conducted with entities established in countries or territories considered as tax havens:

<table>
<thead>
<tr>
<th>Company name of the entity within the group</th>
<th>Brief description of the operation and other information necessary for its evaluation</th>
<th>Amount (thousands of euros)</th>
</tr>
</thead>
<tbody>
<tr>
<td>No data</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Transactions by Iberdrola with subsidiaries and companies in which the Company has an interest that have not been eliminated in the process of consolidation were made in the ordinary course of business of the Company, were
carried out under arm’s-length conditions, and are of little significance to accurately reflect the assets, financial condition and results of operations of the Company.

**D.5.** Give individual details of the operations that are significant due to their amount or relevant due to their subject matter carried out by the company or its subsidiaries with other related parties pursuant to the International Accounting Standards adopted by the EU, which have not been reported in previous sections.

<table>
<thead>
<tr>
<th>Company name of the related party</th>
<th>Brief description of the operation and other information necessary for its evaluation</th>
<th>Amount (thousands of euros)</th>
</tr>
</thead>
<tbody>
<tr>
<td>No data</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**D.6.** Give details of the mechanisms in place to detect, determine and resolve potential conflicts of interest between the company and/or its group and its directors, senior management, significant shareholders or other associated parties.

Pursuant to the Regulations of the Board of Directors, a conflict of interest shall be deemed to exist in those situations provided by law, and particularly when the interests of the director, either for their own or another’s account, directly or indirectly conflict with the interest of the Company or of companies within the Iberdrola group and with their duties to the Company.

An interest of the director shall exist when the matter affects the director or a person related thereto.

The Regulations of the Board of Directors deem the following to be persons related to a Director:

a) The director’s spouse or person related to the director by a like relationship of affection.

b) The ascendants, descendants and siblings of the director or of the director’s spouse (or of a person with a like relationship of affection).

c) The spouses of the director’s ascendants, descendants and siblings.

d) Companies or entities in which the director directly or indirectly holds, including through an intermediary, an interest that gives the director significant influence or in which the director holds a position on the management body or within the senior management thereof or of its controlling company. For these purposes, it is assumed that any interest equal to or greater than ten per cent of the share capital or voting rights or based on which representation on the company’s management body could be obtained, in fact or by law, provides a significant influence.

e) Shareholders that the director represents on the Board of Directors.

Conflicts of interest shall be governed by the following rules:

1. Communication: once a director becomes aware of being in a situation of conflict of interest, the director must give written notice of the conflict to the Board of Directors, in the person of the secretary thereof, as soon as possible. The secretary shall periodically submit a copy of the notices received to the Appointments Committee, in the person of the secretary thereof.

   The notice shall contain a description of the situation giving rise to the conflict of interest, with a statement as to whether it is a direct conflict or an indirect conflict through a related person, in which case the latter person must be identified.
Any question as to whether a director might be involved in a conflict of interest must be forwarded to the secretary of the Board of Directors, and the director must refrain from taking any action until it is resolved.

2. **Abstention:** A director must refrain from taking any action until the Board of Directors reviews the case, approves the appropriate decision and informs the director thereof.

To this end, the director shall leave the meeting during the deliberation and voting on those matters in which the director is affected by a conflict of interest, and shall not be counted in the number of members in attendance for purposes of the calculation of a quorum and the majorities required for approving resolutions.

At each meeting of the Board of Directors and of the committees thereof, the secretary shall remind the directors, before dealing with the agenda, of the abstention rule.

3. **Transparency:** Whenever required by law, the Company shall report any cases of conflict of interest in which the directors have been involved during the financial year in question and of which the Company is aware by reason of notice given thereto by the director affected by such conflict or by any other means.

In those instances in which the conflict of interest is, or may reasonably be expected to be, of such a nature that constitutes a structural and permanent conflict of interest between the director (or a person related thereto) and the Company or the companies forming part of the Iberdrola group, it shall be deemed that the director lacks, or has lost, the competence required to hold office.

Conflicts of interest of the members of the management team are subject to the same rules of communication, abstention and transparency.

Transactions with significant shareholders or other related parties are governed by the rules described in Section D.1 of this report.

**D.7.** Indicate whether the company is controlled by another entity in the meaning of Article 42 of the Commercial Code, whether listed or not, and whether it has, directly or through any of its subsidiaries, business relationships with said entity or any of its subsidiaries (other than the listed company) or carries out activities related to those of any of them.

[ ] Yes  [X] No
E RISK MANAGEMENT AND CONTROL SYSTEMS

E.1. Explain the scope of the company’s financial and non-financial risk management and control system, including tax risk.

Pursuant to the three lines model, Iberdrola’s General Risk Control and Management Policy and the risk policies (corporate and those specific to the businesses) in development thereof are implemented within a comprehensive risk control and management system, supported by the Company’s Risk Committee and based upon a proper definition and allocation of duties and responsibilities at the operating level and upon ensuring the development of supporting procedures, methodologies and tools, suitable for the various stages and activities within the system, including:

a. The establishment of a structure of risk policies, guidelines, limits and indicators, as well as of the corresponding mechanisms for the approval and implementation thereof.
b. The ongoing identification of significant risks and threats, taking into account their possible impact on key management objectives and the financial statements (including contingent liabilities and other off-balance sheet risks).
c. The analysis of such risks, both at each corporate business or function and taking into account their combined effect on the companies of the Iberdrola group as a whole.
d. The measurement and control of risks following homogeneous procedures and standards common to all the companies of the Iberdrola group.
e. The analysis of risks associated with new investments, as an essential element in risk/return-based decision-making, including physical and transition risks related to climate change.
f. The maintenance of a system for monitoring and control of compliance with policies, guidelines and limits, by means of appropriate procedures and systems, including the contingency plans needed to mitigate the impact of the materialisation of risks.
g. The ongoing evaluation of the suitability and efficiency of applying the system and the best practices and recommendations in the area of risks for eventual inclusion thereof in the model.
h. The audit of the comprehensive risk control and management system by the Internal Audit Area.

The foregoing is undertaken in accordance with the following main principles of conduct:

a. Integrate the risk/opportunity vision into the Company’s management, through a definition of the strategy and the risk appetite and the incorporation of this variable into strategic and operating decisions.
b. Segregate functions, at the operating level, between areas that assume risks and areas responsible for the analysis, control and monitoring of such risks, ensuring an appropriate level of independence between them.
c. Guarantee the proper use of risk-hedging instruments and the maintenance of records thereof as required by applicable law.
d. Inform regulatory agencies and the principal external players, in a transparent fashion, regarding the risks facing the companies of the Iberdrola group and the operation of the systems developed to monitor such risks, maintaining suitable channels of communication.
e. Ensure appropriate compliance with the corporate governance rules established by the Company through its Governance and Sustainability System and the update and continuous improvement thereof within the framework of the best international practices as to transparency and good governance, and implement the monitoring and measurement thereof.
f. Act at all times in compliance with the values and standards of conduct reflected in the Code of Ethics, under the principle of “zero tolerance” for the commission of unlawful acts and situations of fraud set forth in the Crime Prevention Policy and in the Anti-Corruption and Anti-Fraud Policy and the principles and good practices reflected in the Corporate Tax Policy.
The General Risk Control and Management Policy and the risk policies in further development thereof apply to all companies that make up the Iberdrola group, over which the Company has effective control, within the limits established by the laws applicable to the regulated activities carried out by the Iberdrola group’s companies in the various countries in which they operate.

Excluded from the scope of this policy are listed country subholding companies and the subsidiaries thereof which, pursuant to their own special framework of strengthened autonomy, have their own risk policies approved by their competent bodies. In any event, said risk policies must be in accord with the principles set forth in the risk policies of the Iberdrola group.

At those companies over which the Company does not have effective control, the Company shall promote principles, guidelines, and risk limits consistent with those established in the General Risk Control and Management Policy and in its supplemental risk policies and shall maintain appropriate channels of information to ensure a proper understanding of risks.

Iberdrola believes that its comprehensive risk control and management system operates on a comprehensive and continuous basis, strengthening such management by business unit or activity, subsidiaries, geographic areas and corporate-level support areas.

**E.2. Identify the bodies within the company responsible for preparing and executing the financial and non-financial risk management and control system, including tax risk.**

**1. BOARD OF DIRECTORS**

In the area within its purview, and with the support of the Audit and Risk Supervision Committee, it must use all of its capabilities in order for the significant risks of the Iberdrola group to be adequately identified, measured, managed and controlled, and to establish through the General Risk Control and Management Policy the mechanisms and basic principles for appropriate management of the risk/opportunity ratio. By virtue thereof, it defines the risk strategy and profile of the group and approves the risk policies.

**2. EXECUTIVE COMMITTEE**

In order to conform the impact of the risks to the established appetite, upon the proposal of affected business or corporate divisions and after a report from the Group’s Risk Committee, it annually reviews and approves the specific guidelines regarding the risk limits of the corporate risk policies.

**3. AUDIT AND RISK SUPERVISION COMMITTEE**

As a consultative body of the Board of Directors, it is vested with various powers relating to the Comprehensive Risk Control and Management System, as set forth in Articles 3, 5, 6 and 10 of the Regulations thereof.

This includes the following (by way of example and based on the importance thereof):

- Conduct a periodic review of the risk policies on at least an annual basis.
- Continuously review and supervise the effectiveness of the internal control and risk management systems, such that the principal risks are properly identified, managed and reported.
- Obtain and analyse with the external auditor information regarding any significant deficiency in internal control that the statutory auditor detects in carrying out its audit work.
- Ensure that the internal control policies and systems are effectively applied.
- As regards the activities of the Risk Management and Internal Assurance Division of the Group, which is functionally controlled by the Committee: i) supervise the activities and ensure the effectiveness thereof, and ii) approve the direction and the annual plan of said Division and its budget.

- Evaluate the various risk tolerance levels established in the risk policies in order to, if appropriate, propose the adjustment thereof.

- Promote a culture of risk avoidance.

- Endeavour to ensure that the internal control and risk management system established at the level of the group identifies at least: i) the different types of financial and non-financial risks, ii) the establishment and review of the risk map and levels that the Company deems acceptable, iii) the measures planned in order to mitigate the impact of identified risks in the event they materialise, and iv) the reporting and internal control systems that will be used to monitor and manage the risks.

- At least annually, call a meeting with each of the heads of the businesses of the group’s companies and of the relevant corporate areas to exercise the powers of the Committee to be informed of the trends of their respective businesses or corporate areas and the risks associated therewith, all without prejudice to the corporate and governance structure of the group, pursuant to which each of the country subholding companies directly and effectively manages the risks of their businesses.

- Maintain appropriate relationships with the audit and compliance committees of the other companies of the group.

- Identify and evaluate emerging risks.

- Obtain creditable information as to whether the most significant risks are managed and maintained within the tolerance figures that have been established.

- Receive information from the Company’s tax director regarding the tax guidelines applied during the financial year, and particularly regarding the level of compliance with the Corporate Tax Policy, as well as regarding the tax consequences of transactions or matters that must be submitted to the Board of Directors for approval when such consequences represent a significant issue.

4. BOARDS OF DIRECTORS OF COUNTRY SUBHOLDING AND HEAD OF BUSINESS COMPANIES

The country subholding companies adopt the Company’s risk policies and specify the application thereof, approving the guidelines on specific risk limits. The audit and compliance committees of such companies shall report to the board of directors thereof on the internal control and risk management systems.

The management decision-making bodies of the head of business companies approve the specific risk limits applicable to each of them and implement the necessary control systems.

Pursuant to their special framework of strengthened autonomy, the listed companies of the group have their own risk policies, which are aligned with those established by the Company.

5. GROUP RISK COMMITTEE

This is a technical body that is chaired by the Risk and Internal Assurance Director and which performs executive duties in the customary management of risks and provides advice to the governance bodies of the Iberdrola group’s companies.

It meets at least once a month, with the participation of the Group’s Risk Management director, the risk directors of the country subholding companies and corporate areas that have such a position, the Internal Audit Area and the Administration and Control Division.

It reviews new reported risks and the reports monitoring the main existing risks, and issues the Quarterly Risk Report of the group, which includes the main risk positions, the report on compliance with policies and risk limits and indicators, and the update of the key risks map.
It is supplemented by the credit risk and market risk committees, which report to the former, and which meet on a monthly basis.

E.3. Indicate the main financial and non-financial risks, including tax risks, as well as those deriving from corruption (with the scope of these risks as set out in Royal Decree Law 18/2017), to the extent that these are significant and may affect the achievement of business objectives.

The companies of the Iberdrola group are subject to various risks inherent in the different countries, territories, industries and markets in which they do business and in the activities they carry out, which may prevent them from achieving their objectives and successfully implementing their strategies.

Pursuant to the definitions established by the General Risk Control and Management Policy, risks at the Iberdrola group level are classified as follows:

- Corporate governance risks.
- Market risks.
- Credit risks.
- Business risks.
- Regulatory and political risks.
- Operational, technological, environmental, social and legal risks.
- Reputational risks.

Given the multidimensional nature of the risks, the taxonomy includes additional classification variables for improved monitoring, control and reporting of these risks. These additional categories include:

- Classification of risks into structural, “hot topics” and emerging, the latter of which are understood as possible new threats with an uncertain impact and undefined probability, and growing threats, which could eventually become material for the companies of the Iberdrola group.
- The inclusion of secondary risk factors, including financial, environmental, social and governance (environmental, social and governance, or “ESG”), fraud or corruption, tax, health, cybersecurity or third party risk factors.

Furthermore, Iberdrola has a Compliance System made up of a set of substantive rules, formal procedures and specific actions intended to ensure that conduct is in accordance with ethical principles and applicable law, preventing, avoiding and mitigating the risk of conduct that is improper or contrary to ethics or the law.

Elements of the system include the Code of Ethics (which is applicable to all professionals of the Iberdrola group’s companies, board members and suppliers) and the Compliance Unit, a collective permanent and internal body linked to the Sustainable Development Committee, which, among other things, spreads a preventive culture based on the principle of “zero tolerance” towards the commission of illegal acts and improper conduct. The System has been designed following the best domestic and international practices in the area of compliance, fraud prevention and the fight against corruption.

Finally, in relation to possible risks with a reputational impact, the following is reported:

- The commencement of an oral criminal trial ordered by Central Preliminary Examining Court number 2 against “Iberdrola Energía España, S.A.” (Sociedad Unipersonal) and four of its employees after the proceeding that commenced in April 2017 when the Public Prosecutor filed a claim against this company relating to the price of bids for the Duero, Sil and Tajo hydroelectric management units between 30 November 2013 and 23 December 2013.
- The commencement of an oral criminal trial ordered by Preliminary Examining Court No. 4 of Valladolid for the alleged Wind Farm Payoff Scheme (Trama Edilica) in Castile-León, which orders “Iberdrola Renovables de Castilla y León, S.A.” S.A. to appear as a party with potential subsidiary civil liability in the amount of €11,257,500, jointly and severally with the Regional Government of Castile and Leon.

For more details regarding the risks to which the Iberdrola group’s companies are subject, see:
— The “Principal risks and uncertainties” section of the consolidated directors’ report for financial year 2022.
— The “Climate action and TCFD” section of the “Statement of Non-Financial Information, Sustainability Report 2022”.
— Section 5.3 “Risks” of the “Integrated Report February 2023”.

The activities of the Iberdrola group’s companies during financial year 2023 and subsequent years will be particularly affected by the following main risk factors:

— The aforementioned ESG risks.
— The impact on the global economy of the evolving Russian invasion of Ukraine, which in turn exacerbates the risks listed below.
  • Changes in the interest rate and exchange rate of the principal countries in which the Iberdrola group’s companies do business, as well as inflation.
  • Changes in international gas prices and emission allowances (or equivalent mechanisms) and their impact on electricity prices.
  • Prices of raw materials and tensions in the supply chains.
  • Energy market and tax intervention measures adopted by different governments.
— The future reform of the European and Spanish electricity market.
— Changes in industry regulations in Mexico.
— Competition in the liberalised market.
— The annual change in hydraulic, solar and wind resources.
— The ability to implement the major investment plan, in terms of cost and timing, including entry into new countries.
— Regular regulatory reviews of the Iberdrola group’s companies that carry out electricity distribution and transmission activities.
— Financial and reputational risk arising from a potential increase in cybersecurity attacks or incidents. Noteworthy in this regard are the regular appearances before the Audit and Risk Supervision Committee of executive officers competent to report on this issue.

E.4. Indicate whether the entity has risk tolerance levels, including for tax risk.

The Company’s Board of Directors reviews and approves the risk tolerance levels that are acceptable at the Iberdrola group level on an annual basis. The General Risk Control and Management Policy, together with the policies that further develop and supplement it, qualitatively and quantitatively establish the annually accepted risk appetite, in a sufficiently detailed manner, both at the group level and at the level of each of the principal businesses and corporate functions, in accordance with the objectives established in the multi-year plan and the corresponding annual budgets.

By way of complement, the Administration and Control Division, after considering such limits and guidelines, in order to verify the risk globally assumed in the annual profit and loss account, engages in a comprehensive probability analysis of the global risk remaining for the financial year at the time of approving the annual budget.

In addition, all new multi-year plans are accompanied by their corresponding analysis of associated risk.

The General Risk Control and Management Policy is further developed and supplemented through the following policies, which are also subject to approval and update by the Company’s Board of Directors, and which include the following risk limits and indicators:

Corporate Risk Policies:

— Corporate Credit Risk Policy
— Corporate Market Risk Policy
— Operational Risk in Market Transactions Policy
— Insurance Policy
— Investment Policy
— Financing and Financial Risk Policy
— Treasury Share Policy
— Risk Policy for Equity Interests in Listed Companies
— Information Technology Policy
— Cybersecurity Risk Policy
— Reputational Risk Framework Policy
— Purchasing Policy
— Occupational Safety and Health Risk Policy

Risk policies for the various businesses of the Iberdrola group’s companies:

— Risk Policy for the Networks Businesses of the Iberdrola group
— Risk Policy for the Electricity Production and Retail Businesses of the Iberdrola group
— Risk Policy for the Real Estate Business

The General Risk Control and Management Policy, as well a summary of the risk policies in further implementation thereof, are available on Iberdrola’s corporate website (www.iberdrola.com).

The limits and indicators of the risk policies should be consistent with the annual budget and the objectives set forth in the multi-year investment plans. The numeric values of the limits and indicators set forth in the various policies are probabilistic in nature (like VaR and EBITDA at risk) or deterministic in nature, and are expressed in monetary units, indices or benchmarks based on which volumetric risks and/or values are generated, including:

— limits on the maximum overall credit risk exposure by type of counterparty;
— limitations on market risk proportional to the volume of activity of each business;
— strict overall limit on the discretionary trading of energy;
— limitations on operational risk through preventative maintenance programmes and assurance programmes; and
— strict limitations on activities not associated with the main energy business.

The Corporate Tax Policy establishes the limits on tax risk by setting the tax strategy, the principles of conduct and the good tax practices assumed by the Company.

As described above, the Iberdrola group’s companies have a risk tolerance level (acceptable risk level) established at the corporate level, which is annually approved by the Company’s Board of Directors and by its Executive Committee. The Group’s Risk Committee, the Operating Committee, the Audit and Risk Supervision Committee, the businesses, the corporate functions and the Group’s Risk and Internal Assurance Division also participate in the process.

E.5. Indicate which risks, including tax risks, have materialised during the year.

The activities of the Iberdrola group’s companies during 2022 were affected by various risks that materialised in the countries and markets in which they operate. Thanks to a diversification of activities, markets and geographical regions (which allowed the negative impacts on some businesses to be offset by favourable performance in others) and the measures adopted, the overall impact on the consolidated financial statements of the Iberdrola group and its subsidiaries has been limited.

The risks that have materialised include various measures approved by the different European governments in the countries in which the companies of the Iberdrola group are present, following the sharp rise in prices on international gas markets as a result of the war in Ukraine.

Main risks that have materialised:

In Spain:

i  The various regulatory measures approved by the Spanish government include the following:
Royal Decree-Law 6/2022 of 29 March adopting urgent measures within the framework of the National Plan responding to the economic and social consequences of the war in Ukraine.

Royal Decree-Law 10/2022 of 13 May establishing a temporary production cost adjustment mechanism to reduce the price of electricity on the wholesale market.

Royal Decree-Law 11/2022 of 25 June adopting and extending certain measures to respond to the economic and social consequences of the war in Ukraine, to address situations of social and economic vulnerability, and for the economic and social recovery of the island of La Palma.

The main impacts on the electricity sector are as follows:

- Intervention in the wholesale market price for electricity through 31 Mat 2023, by introducing a cap on the price of gas.
- The gas price reduction with the limit on fixed price electricity sales contracts above €67/MWh (+ Commercial margin + charges), extended until 31 December 2023 by Royal Decree-Law 18/2022 of 18 October.
- On the positive side, the 7% tax on generation is suspended and there are reductions in the electricity tax to 0.5% and VAT on electricity to 5%, extended until 31 December 2023 by Royal Decree-Law 20/2022 of 27 December.
- The reinstatement of the hydroelectric fee and the subsidised rates (bono social).
- An extraordinary update to the remuneration mechanism for renewables subject to Royal Decree 413/2014 of 6 June.
  
  ii Law 38/2022 of 27 December establishing a new temporary levy on energy companies, credit institutions and other taxes, with an impact on the results for financial years 2023 and 2024.
  
  iii The lower annual hydroelectric (-5 TWh) and nuclear (-0.7 TWh) production during the year, in a situation of very high market prices, as a result of an extreme situation of drought and the unexpected unavailability of Cofrentes NPP, respectively.
  
  iv Ministerial orders TED/490/2022 of 31 May and TED/749/2022 of 27 July, establishing the remuneration of electricity distribution companies for 2016 and the years 2017, 2018 and 2019, on terms unfavourable to the interests of the Iberdrola group's companies, which have been appealed.

In the United Kingdom:

- The new windfall profits tax on generators of electricity from 2023 onwards.

In Mexico:

- The Energy Regulatory Commission's fine imposed on "Iberdrola Energía Monterrey S.A. de C.V." in an amount equivalent to US$460 million for the sale in 2019 and 2020 of electricity from a self-supply company, which has been provisionally suspended by the courts.

- The National Center for Energy Control (Centro Nacional de Control de Energía) (CENACE) disconnected the Santiago wind farm from the system as a result of the notification by "Empresa Filial CFE Intermediación de Contratos Legados, S.A. de C.V." (CFE-ICL) of the termination of the connection contract on the grounds that the wind farm is incorrectly sited. The Iberdrola group company with standing filed a claim for relief and CFE-ICL has been notified of the commencement of a commercial arbitration.

- On 31 January 2022 and 31 August 2022, the connection contracts to operate the 550 MW Monterey or Dulces Nombres (CDU) power station in Monterrey, Nuevo León, and the 144 MW Enertek cogeneration power station in Altamira, Tamaulipas, both operating under the self-supply regime, were terminated, and the relevant permits to operate under the market regime have been requested at the appropriate time. These permits have yet to be obtained at the date of production of this report.

Other risks that have materialised:

- The write-off of all of the accounts receivable for the project performed by Iberdrola Ingeniería in Salem (United States of America), with a total impact of US$89 million.

Positive events that have occurred include the following:

- The ruling of the Spanish Supreme Court annulling the current financing mechanism for subsidised electricity rates (Bono Social) in effect until early 2022, with a positive impact on EBITDA of €109 million.
The ruling of the Economic-Administrative Court upholding a reduction coefficient for the tax on spent nuclear fuel applied to fuel assemblies inserted into the reactor prior to 1 January 2013, with a positive impact on EBITDA of €79 million.

The return of accounts receivable from our customers to the usual pre-covid ranges in Spain and in other countries.

E.6. Explain the response and oversight plans for the company's main risks, including tax risks, as well as the procedures followed by the company in order to ensure that the Board of Directors responds to any new challenges that arise.

The comprehensive risk control and management system, together with the control and management policies and systems that implement them, including the Group’s Risk Committee and the Company’s Operating Committee, have allowed for the identification of risks and new threats sufficiently in advance, as well as for establishing appropriate mitigation plans.

The Company’s Operating Committee meets on an approximately weekly basis.

The Group’s Risk Committee, which reviews the evolution of the various risks, meets on a monthly basis, and on a quarterly basis issues the Quarterly Risk report of the Iberdrola group, which includes the main risk positions, the report on compliance with policies and limits approved, and the update of the key risks maps.

On at least a quarterly basis, the Audit and Risk Supervision Committee of the Board of Directors supervises the evolution of the Company’s risks:

- It reviews the Iberdrola group’s quarterly risk reports submitted by the Group’s Risk Management and Internal Assurance Director.
- It coordinates and reviews the risk reports submitted on a regular basis (at least half-yearly) by the audit and compliance committees of the country subholding and head of business companies of the Iberdrola group.
- On at least a half-yearly basis, it prepares a risk report for the Board of Directors.

In addition, the Audit and Risk Supervision Committee of the Board of Directors regularly calls each one of the heads of businesses and of the relevant corporate areas to a meeting so that they can report on the trends in their respective businesses or corporate areas and the risks associated therewith.

The Iberdrola group’s risk management model is based on the internationally recognised three lines model and ensures the existence of mechanisms so that all significant group risks are controlled at all times and subject to regular reporting to the various committees and commissions and externally.

F INTERNAL RISK MANAGEMENT AND CONTROL SYSTEMS RELATING TO THE PROCESS OF PUBLISHING FINANCIAL INFORMATION (ICFRS)

Describe the mechanisms forming your company’s internal control over financial reporting systems (ICFRS).

F.1. The entity’s control environment.

Report on at least the following, describing their principal features:
F.1.1 The bodies and/or departments that are responsible for: (i) the existence and maintenance of an adequate and effective IFRS; (ii) its implementation; and (iii) its supervision.

Iberdrola’s Board of Directors is ultimately responsible for implementing and maintaining a proper and effective Internal Control over Financial Reporting System (hereinafter, “ICFRS”). The boards of directors of each of the country subholding and head of business companies also have this responsibility within their respective purview.

The heads of the country subholding companies and of the head of business companies, together with their respective heads of control, as well as the directors of the corporate areas, are in turn responsible for the design and implementation of the ICFRS. This responsibility is explicitly set forth in the certifications that said persons sign on a half-yearly basis in relation to the financial information for their respective areas of responsibility.

Pursuant to Article 31.6.d of the Regulations of the Board of Directors, the Audit and Risk Supervision Committee (hereinafter, the “Committee”) is responsible for supervising the effectiveness of the internal control of Iberdrola and of all of the companies within its group, as well as the risk management systems thereof. Article 31.6.f of this Regulation also provides that the duties of the Committee include that of supervising the process of preparing and presenting mandatory financial information and submitting recommendations or proposals to the Board of Directors to protect the integrity of this information.

The Committee is supported by the Risk Management and Internal Assurance Division and the Internal Audit Area in the performance of its powers with respect to the internal control and risk management systems. Any audit and compliance committees at the country subholding and head of business companies have these powers within their respective purview.

The mission of the Risk Management and Internal Assurance Division, which is functionally subordinate to the Committee (according to the IIA 2020 “Three Lines Model” of The Institute of Internal Auditors, this area would be a “second line”), is to ensure the proper definition, implementation and maintenance of the ICFRS, assuring Senior Management and the Board of Directors, through the Committee, that it is effective.

F.1.2 Indicate whether the following exist, especially in relation to the drawing up of financial information:

- Departments and/or mechanisms in charge of: (i) the design and review of the organisational structure; (ii) clear definition of lines of responsibility and authority with an appropriate distribution of tasks and functions; and (iii) ensuring that adequate procedures exist for their proper dissemination throughout the entity:

The Board of Directors of Iberdrola defines the organisational structure at the first level. The heads of these top-level organisations, together with the Personnel and Organisation Division, implement the deployment within their respective purview.

Each top-level division prepares a proposed organisational structure, including a description of the mission, duties and responsibilities of the various organisations deployed, which must subsequently be validated by the Personnel and Organisation Division, as well as by the Finance, Control and Corporate Development Division.

The main responsibility for preparing financial information lies with the Administration and Control Division. This division proposes the structure of heads of Control of the country subholding and head of business companies and deals with coordinating and supervising the conduct thereof.

- Code of conduct, the body approving this, degree of dissemination and instruction, principles and values covered (stating whether there is specific mention of record keeping and preparation of financial information), body charged with analysing breaches and proposing corrective actions and sanctions:
Iberdrola has a Code of Ethics that was first approved by the Board of Directors in financial year 2002, and that is regularly reviewed and updated.

The Code of Ethics is communicated and disseminated among the professionals of the Iberdrola group’s companies in accordance with the plan approved annually for this purpose by the Iberdrola’s Compliance Unit, which provides for various initiatives in the area of training (both on-line and in-person) and communication, addressed to the various groups of professionals based on their exposure to compliance risks.

The Code of Ethics, which includes informational transparency among its general ethical principles and principles on relations with Iberdrola’s Stakeholders, expressly states the following in Article B.6.:

“1. The companies of the Iberdrola Group shall provide true, proper, useful and reliable information regarding their performance and relevant conduct. The transparency of the information required to be disclosed is a basic principle that must govern the conduct of all directors, professionals and suppliers of the Group’s companies.

2. The financial information of the companies integrated within Iberdrola, and particularly the annual financial statements, shall reflect in all material respects a true and fair view of their assets, financial position and results as provided by law. For such purposes, no director, professional or supplier shall conceal or distort the information set forth in the accounting records and reports of the group’s companies, which shall be complete, accurate and truthful.

3. A lack of honesty in the communication of information from Iberdrola’s boundary, whether within the Group (to professionals, subsidiaries, departments, internal bodies, and management decision-making bodies, among others) or externally (to auditors, shareholders and investors, regulatory bodies, and the media) is a breach of this Code of Ethics. This includes delivering incorrect information, organising it in an incorrect manner or seeking to confuse those who receive it.”

The Compliance Unit (the “Unit”), which is a collective permanent and internal body linked to the Sustainable Development Committee of Iberdrola, controls the effective operation of Iberdrola’s Compliance System, with powers in the area of compliance. The duties of the Unit include ensuring and coordinating the application of the Code of Ethics and of the other rules in the compliance area, and the spread of a preventive culture based on the principle of “zero tolerance” towards the commission of unlawful acts. It also approves the “General Compliance System Framework of the Iberdrola group”, which contains the basic principles of structure and operation of the Compliance System of the companies of the Iberdrola group, as well as the duties and responsibilities of the various bodies involved. The Unit also evaluates and prepares an annual report on the effectiveness of the Compliance System of Iberdrola and of the companies of the Iberdrola group. The report is submitted to the Sustainable Development Committee, which issues its opinion and forwards it to the Board of Directors of Iberdrola.

The Unit is also in charge of investigating grievances and potential improper activities in order to determine whether a professional of Iberdrola has acted contrary to the provisions of applicable law or the Code of Ethics, and if applicable, to submit its conclusions to the Personnel and Organisation Division for it to decide on the application of disciplinary measures in accordance with the offences and penalties system set forth in the collective bargaining agreement to which the professional belongs or in applicable labour law. The Compliance divisions of the other companies of the Iberdrola group perform this same function at each of them.

Pursuant to Article F.5.1 of the Code of Ethics, directors, professionals and suppliers of the Iberdrola group’s companies expressly accept the rules of conduct established therein that are applicable thereto.

Pursuant to Article F.5.2 of the Code of Ethics, professionals who hereafter join or become part of the Iberdrola group’s boundary and suppliers contracting with companies of the Iberdrola group shall also expressly accept the rules of conduct to which they are subject as set forth in sections D (for professionals) and E (for suppliers), respectively, of the Code of Ethics.

Likewise, directors shall receive a complete copy of the Code of Ethics, for which they shall deliver a signed receipt.

- Whistleblower channel allowing notifications to the audit committee of irregularities of a financial and accounting nature, in addition to potential breaches of the code of conduct and unlawful activities undertaken in the organisation, indicating whether this channel is confidential and whether anonymous notifications can be made, protecting the rights of the whistleblower and the person reported.
Iberdrola has various ethics mailboxes based on the sender: (i) ethics mailboxes for professionals; (ii) the mailbox available to shareholders and investors; and (iii) the suppliers’ mailbox, accessible from the Employee Portal, from the OLS-Shareholders’ Club system or their mobile app, and from the Supplier Portal, respectively. These channels allow for communicating and complaining of any conduct that may involve the commission of an improper act or an act in violation of law or Iberdrola’s Governance and Sustainability System, and particularly the rules of conduct provided for in the Code of Ethics, or for asking questions regarding any issue with respect to compliance.

Identification of the complaining party or whistleblower is not required to send a complaint through these mailboxes (complaints may be anonymous), and if the reporting party identifies themselves, Iberdrola guarantees absolute confidentiality with respect to both the information provided and the personal data of the reporting party. The companies of the Iberdrola group also state their commitment to not retaliate against any professional making a complaint, unless there is bad faith on the part of the complaining party.

- Training and periodic refresher programmes for personnel involved in the preparation and revision of financial information, as well as in the assessment of the ICFRS, covering at least accounting standards, auditing, internal control and risk management:

Training is key in the Company’s People Management Policy and is an essential element for new professionals to adapt themselves to the Iberdrola group and for the proper performance of their jobs, as well as to keep the group’s professionals updated regarding any changes that occur within the group itself as well as the environment within which they do business.

As an example of the commitment to training, Iberdrola has a corporate campus with multiple training centres in various countries, including the International Corporate Campus in San Agustín del Guadalix (Madrid). Training in all areas is provided at these facilities by internal professionals, outside entities, universities, outside experts, etc.

Specifically, the personnel directly or indirectly involved in the preparation and review of financial information and in the evaluation of the ICFRS, based on their different responsibilities, receive regular training on accounting standards, auditing, internal control and risk management, which is intended to give them the knowledge needed for the optimal performance of their duties as well as to anticipate, to the extent possible, the proper alignment of the Iberdrola group’s companies with future rules and best practices. Most of these courses are provided by outside entities: business schools, universities and consultants specialising in economic/financial matters.

In addition, and on a general basis, these professionals regularly take coursework to improve their qualifications in the use of the computer-based tools required to perform their duties, mainly Excel and database management.

These professionals also attend various conferences, symposia and seminars in the areas of accounting, tax and internal audit, at both the domestic and the international level.

Furthermore, in order to pool best practices and analyse the challenges facing the Iberdrola group’s companies in these areas, various international meetings among the professionals of these areas from the different countries and country subholding companies are organised on an annual basis. Specifically, in 2022 there were, among other events, the “IV International Internal Audit Planning Symposia” and the “XIV Global Control Committee”, held on an annual basis to analyse the most significant issues affecting the function of preparing and reviewing financial information, like new accounting rules.

As in 2021, a large portion of the activities and actions mentioned above have been carried out mainly virtually or on a hybrid bases (in-person and remote), due to the situation caused by COVID-19 pandemic.

In addition, although not considered specific training activities, the Accounting Practice Division, which reports directly to the Administration and Control Division, is responsible for defining and updating the accounting policies, publishes a quarterly bulletin that is broadly distributed within the Iberdrola group regarding new accounting developments with respect to International Financial Reporting Standards (“IFRS”), which includes updates on standards (standards that have entered into effect, published draft or proposed standards, standards issued, standards approved by the European Union, new standards and expected drafts or proposals, as well as existing standards) and accounting questions asked internally, together with the conclusions with respect thereto.
F.2. Assessment of risks in financial reporting.

Report on at least the following:

F.2.1 The main characteristics of the risk identification process, including risks of error and fraud, as regards:

- Whether the process exists and is documented.

The process of identifying risks of error in financial information is one of the most important steps within the methodology used for implementing Iberdrola’s ICFRS, documenting both the objectives and performance thereof as well as its results.

The methodology, developed and updated by the Risk Management and Internal Assurance Division, starts with an analysis of the consolidated financial information of the Iberdrola group and of the various country subholding companies, in order to select the most significant accounting headings and notes, pursuant to quantitative (materiality) and qualitative (business risk and third-party visibility) standards. The headings and notes selected are grouped into management cycles or large processes in which the selected information is generated. The cycles are analysed and a high-level description of each of them is prepared as a means for identifying the potential risks of error in the financial information in relation to attributes like integrity, presentation, valuation, cut-off, recording and validity. The risks identified are subject to a process of assessment, selecting the most significant ones, applying professional judgement regarding a number of indicators (existence of documented processes and controls, intervention of systems that automate the process, occurrence of incidents in the past, familiarity with and maturity of the process, and need for the use of judgement to make estimates). The risks of fraud are not subject to explicit identification, although they are taken into account to the extent that they can generate material errors in the financial information.

Once the most significant risks have been selected and the main aspects to be controlled are identified, the controls required for the mitigation or management thereof are selected and designed, with these controls being subject to monitoring and documentation within the scope of the ICFRS.

The Risk Management and Internal Assurance Division provides specialised knowledge regarding internal control and carries out duties of support and coordination throughout the process described above, endeavouring to ensure the consistency and homogeneity of the model at the level of the Iberdrola group, as well as the efficiency and effectiveness thereof.

The selected risks are reviewed at least annually within the framework of the assessment of the effectiveness of the internal control system performed by those responsible for it with the support and coordination of the Risk Management and Internal Assurance Division. This review is intended to update the risks to the changing circumstances in which the Company operates, especially in the event of changes in the organisation, computer systems, regulation, products or market conditions.

The above risks, together with the controls that mitigate or manage them, are systematically reviewed by the Internal Audit Area.

- Whether the process covers all the objectives of financial reporting (existence and occurrence; completeness; valuation; presentation; disclosure and comparability; and rights and obligations), whether it is updated and if so how often:
As mentioned above, the cycles or large processes in which financial information is generated are reviewed at least on an annual basis to identify potential risks of error in relation to attributes like validity (existence and approval), integrity, valuation, presentation, cut-off and recording.

- The existence of a process for identifying the scope of consolidation, taking into account, among other factors, the possible existence of complex corporate structures or special purpose vehicles:

The scope of consolidation is identified on a monthly basis, and is used to produce an updated map of companies, expressly identifying the changes that have occurred in each period.

The scope of this review is the totality of companies in which Iberdrola or any of its subsidiaries has an interest, regardless of the significance thereof.

Furthermore, following the provisions of Section 529 of the Companies Act, the Regulations of the Board of Directors provide that the purview of the Board of Directors includes, among other things, approving the creation or acquisition of equity interests in special purpose entities or entities registered in countries or territories that are considered to be tax havens, as well as any other transactions or operations of a similar nature that, due to their complexity, might diminish the transparency of the Iberdrola group. In any event, said decisions must be preceded by a report of the Audit and Risk Supervision Committee, as provided by its Regulations, unless these transactions are carried out by listed country subholding companies of the Iberdrola group or subsidiaries thereof, in which case the audit and compliance committee or equivalent body of such listed country subholding company issues the report.

Pursuant to specific internal procedures in effect (conforming to the Iberdrola group’s corporate governance model), the initiative relating to the creation or acquisition of an interest in a special purpose entity or an entity domiciled in a tax haven is within the purview of the management of Iberdrola or of the country subholding or head of business company or subsidiary thereof that intends to create or acquire a company of this nature.

- Whether the process takes into account the effects of other types of risk (operational, technological, financial, legal, tax, reputational, environmental, etc.) to the extent that they affect the financial statements:

The process of identifying risks of error in financial information takes into account the effects of other types of risk (operational, technological, legal, tax, reputational, environmental, etc.) to the extent that they significantly affect the financial statements. These risks are assessed and managed by various corporate units such as the Risk Management Division or Legal Services, among others. However, there is no express categorisation of such other types for the identification of financial information risks.

- The governing body within the company that supervises the process:

The governing body that supervises the process is the Audit and Risk Supervision Committee, which is supported by the Risk Management and Internal Assurance Division and the Internal Audit Area in the performance of this duty.

F.3. Control activities.

Report on whether the company has at least the following, describing their main characteristics:

F.3.1 Review and authorisation procedures for financial information and a description of the ICFRS, to be disclosed to the securities markets, indicating
those responsible, as well as documentation describing the flow of activity and controls (including those relating to the risk of fraud) of the various types of transactions which may materially affect the financial statements, including accounting closing procedures and the specific review of significant judgements, estimates, valuations and projections.

Iberdrola’s Board of Directors defines the process for preparing the consolidated financial information of the Iberdrola group and clearly determines the powers vested in the Audit and Risk Supervision Committee (hereinafter, the “Committee”) and in the audit and compliance committees of the other companies of the group through the Iberdrola Group Financial Information Preparation Policy that applies to all companies of the Iberdrola group.

“Consolidated financial information” means the information appearing in the consolidated annual financial statements, in the interim management statements corresponding to the results of Iberdrola and its consolidated group for the first and third quarter, and in the half-yearly financial report.

This policy provides that the financial information required for the preparation of the “consolidated financial information” must be prepared in accordance with the accounting standards established in the Accounting Policies Handbook and the models approved by Iberdrola’s Administration and Control Division.

Said policy provides that the management decision-making body of each company shall be responsible for preparing the financial information relating to its respective company that may be required to prepare the “consolidated financial information”. By analogy, the management decision-making bodies of the country subholding companies shall be responsible for approving the “financial information for consolidation” within which the information regarding the company itself and that of the subsidiaries forming part of its subgroup is included.

Thus, the management decision-making bodies of the country subholding companies, following a report from their respective audit and compliance committees, and based on the information received from their subsidiaries, shall prepare and approve the financial information for consolidation corresponding to their subgroup, and once such information has been verified by their external auditor within the context of its review of the consolidated financial information, they shall send it to Iberdrola’s Administration and Control Division prior to the date indicated thereby, in order to prepare the consolidated financial information and submit it for formulation or approval by the Company’s Board of Directors, as appropriate, after a report from the Committee.

Furthermore, the process or structure of certification of the financial information, which is managed and coordinated by the Risk Management and Internal Assurance Division, is formally carried out on a half-yearly basis, coinciding with the interim and annual close, reflects the form in which the financial information is generated within the companies of the Iberdrola group.

In this structure, the heads of the country subholding companies and the heads of the head of business companies, together with their respective heads of control, as well as the heads of the global corporate areas, certify both the reliability of the financial information regarding their areas of responsibility (which is the information they provide to the Company for consolidation at the group level) and the effectiveness of the internal control system established to reasonably guarantee such reliability within their area of responsibility. Finally, the executive chairman and the General Finance, Control and Corporate Development Director (CFO), who is responsible for the preparation of the financial information, certify to the Board of Directors the reliability of the annual financial statements and the half-yearly financial report.

The Committee, with the support of the Risk Management and Internal Assurance Division and the Internal Audit Area, supervises the entire process of certification, submitting to the Board of Directors the conclusions obtained from this analysis at the meetings during which the financial statements are formally prepared.

As regards the description of the IFRS to be published in the securities markets, the procedure for the review and approval thereof is the same as the one used for all disclosures of an economic and financial nature in the Annual Corporate Governance Report.

The documentation of the IFRS includes high-level descriptions of the cycles for generating the selected relevant financial information, as well as detailed descriptions of the prioritised risks of error and of the controls designed for the mitigation or management thereof. The description of the controls includes the evidence to be obtained during the implementation thereof, which is necessary for their review.
Each of the accounting close processes at the businesses is considered a cycle, and the same occurs with the group of accounting close activities at the corporate level, with the global consolidation process and with the process of preparing the notes to the financial statements. This means that all of these activities are subject to the methodological process described in the section relating to risks.

Furthermore, the specific review of critical accounting judgements, estimates, valuations and relevant projections is subject to specific controls within the model, as these types of issues involve risks of error in the various cycles in which they are made. The evidence of the specific controls is the support for such reviews in many cases.

Independently of the process of certification followed in the countries, businesses and corporate areas, the Committee, with the support of the Internal Audit Area, performs a quarterly global review of the financial information, ensuring that the half-yearly financial reports and quarterly management statements are prepared using the same accounting standards as the annual financial reports, and verifies the proper definition of the scope of consolidation and the correct application of generally accepted accounting principles and of the IFRS.

F.3.2 Internal IT control policies and procedures (access security, control of changes, system operation, operational continuity and segregation of duties, among others) which support significant processes within the company relating to the preparation and publication of financial information.

The controls considered to mitigate or manage the risks of error in financial reporting include some relating to the most significant software applications, like the controls relating to user access permissions or those relating to the integrity of the transfer of information between applications, control of operations and change management.

In addition, the companies of the Iberdrola group have internal control guidelines and procedures regarding IT systems in relation to the acquisition and development of software, the acquisition of systems infrastructure, the installation and testing of software, change management, service levels, third-party services, security of the systems and access thereto, incident management, and continuity of operations and segregation of functions.

These guidelines and procedures (which in some cases are different based on geographic area or type of solution, and are in a process of progressive homogenisation) are applied to all IT systems that support the relevant processes of generation of financial information, and to the infrastructure required for the operation thereof.

At the Iberdrola group level, the Company also has an Information Technology Policy that contemplates the management of risks associated with the use, ownership, operation, participation, influence and adoption of specific information technology or the processes for the management and control thereof.

Thus, there is a model of general controls integrated within the risk management model that allows for a global evaluation of the risks related to information technology.

Both the risk model and the IT controls are based on market best practices, like COBIT5 and COSO. The evolution thereof over the long term is maintained by including the new needs arising from the changing regulatory compliance framework that applies to the IT systems and services, as well as the recommendations and guidelines of auditors and relevant third parties.

As part of the general IT controls model, there is a regular evaluation of the effectiveness of the information technology controls implemented in the area of financial systems, adopting the appropriate measures if any incident is detected.

The heads of the Iberdrola group’s information systems certify the effectiveness of the internal controls established over the financial reporting systems on an annual basis. This certification covers the relevant financial systems based on the scope of the external financial audit and the considerations of systems organisation, internal assurance, internal audit and the relevant business organisations within the boundary of the Iberdrola group.

For financial year 2022, the total number of systems covered by the IT controls system was 48, on which a model of 21 controls was applied, most of which are evaluated and applied by the Systems Division, and in some cases by other business organisations.

The frequency of the evaluation is annual or biannual, depending on the nature of the control, and it is performed using a principle of sampling of all of the relevant evidence in each case. The entire process of evaluating the IT controls is supported by a “GRC” (Governance, Risks and Compliance) system and is supervised annually by the Internal Audit Area.
F.3.3 Internal control policies and procedures for overseeing the management of activities subcontracted to third parties, as well as of those aspects of assessment, calculation or valuation entrusted to independent experts, which may materially affect financial statements.

In general terms, the companies of the Iberdrola group do not have significant functions subcontracted to third parties with a direct impact on financial information. The evaluations, calculations or assessments entrusted to third parties that could materially affect the financial statements are considered to be activities relevant to the generation of financial information leading to the identification of any priority risks of error, which involves the design of associated internal controls. These controls cover the internal analysis and approval of fundamental assumptions to be used, as well as the review of the evaluations, calculations or assessments made by outside parties, by comparing them to the calculations made internally.

F.4. Information and communication.

Report on whether the company has at least the following, describing their main characteristics:

F.4.1 A specifically assigned function for defining and updating accounting policies (accounting policy area or department) and resolving doubts or conflicts arising from their interpretation, maintaining a free flow of information to those responsible for operations in the organisation, as well as an up-to-date accounting policy manual distributed to the business units through which the company operates.

The Accounting Practice Division, which reports to the Administration and Control Division, is responsible for defining and updating the accounting policies, as well as for resolving questions or conflicts arising from the interpretation thereof. It maintains fluid communication with the heads of operation of the organisation, and particularly with the heads of the accounting functions.

As indicated in section F.1. above, it publishes a bulletin on a quarterly basis that is broadly distributed within the Iberdrola group regarding new accounting developments deriving from the IFRS, which includes updates on standards (standards that have entered into effect, published draft or proposed rules, standards issued, standards approved by the European Union, new standards and expected drafts or proposals, as well as existing standards) and accounting questions asked internally, together with the conclusions with respect thereto.

The Accounting Practice Division is also responsible for keeping the Accounting Policies Handbook continuously updated and ensuring the appropriate dissemination thereof.

The Accounting Policies Handbook is continuously updated. For this purpose, the Accounting Practice Division analyses whether the new developments or changes in the accounting area have an effect on the accounting policies of the Iberdrola group’s companies, as well as the date of entry into force of each of the standards. When a new provision, or new interpretations thereof, are identified as having an effect on the accounting policies of the Iberdrola group’s companies, they are included in the handbook, and also communicated to the parties responsible for preparing the financial information of said companies through the quarterly bulletins mentioned above, and the application supporting the handbook is also updated.

The updated version of said handbook is available in an application on the internal network of the Iberdrola group’s companies. This application is also accessible by users via remote access and can be connected to e-mail. Any change or upload of a document of the handbook generates an e-mail notice to all users.
F.4.2 Mechanisms for capturing and preparing financial information in standardised formats for application and use by all units of the entity or group, and support its main financial statements and notes, as well as disclosures concerning ICFRS.

The mechanism for capturing and preparing the information supporting the main financial statements within the boundary of the Iberdrola group is primarily based on the use of a unified management consolidation tool (called BPC), which is accessible from all geographic areas and is currently deployed at all of the Iberdrola group’s companies.

A large part of the information supporting the breakdowns and notes is included in the consolidation tool, with the rest being captured by homogeneously formatted spreadsheets, called reporting packets, that are prepared for the half-yearly and yearly close.

F.5. Supervision of the functioning of the system.

Report on at least the following, describing their principal features:

F.5.1 The activities of the audit committee in overseeing the ICFRS as well as whether there is an internal audit function one of the responsibilities of which is to provide support to the committee in its task of supervising the internal control system, including the ICFRS. Additionally, describe the scope of the ICFRS assessment made during the year and the procedure through which the person responsible for performing the assessment communicates its results, whether the company has an action plan detailing possible corrective measures, and whether their impact on financial reporting has been considered.

The Audit and Risk Supervision Committee (hereinafter, the “Committee”) is supported by the Risk Management and Internal Assurance Division and the Internal Audit Area in the performance of its powers with respect to the internal control and risk management systems.

The Committee’s supervision of the ICFRS mainly includes:

i. monitoring compliance with the certification process by the various persons responsible for financial information;

ii. reviewing the design and operation of the internal control system to evaluate the effectiveness thereof, with the support of the Risk Management and Internal Assurance Division and the Internal Audit Area; and

iii. regular meetings with the external auditor, the Administration and Control Division, the Risk Management and Internal Assurance Division, the Internal Audit Area and senior management to review, analyse and comment on the financial information, the boundary of companies that it covers and the accounting criteria applied, as well as any significant weaknesses in internal control that have been identified.

The Risk Management and Internal Assurance Division performs functions that include, among others, monitoring, supporting, coordinating and homogenising the implementation of the ICFRS, establishing the methodology, criteria and reporting method, as well as the operational monitoring of controls and the regular assessment of the effectiveness of the ICFRS.

The parties responsible for preparing the financial information of each country subholding company, head of business company and corporate area must engage in an annual process, coordinated by the Risk Management
and Internal Assurance Division, of reviewing the design and operation of the internal control system within their area of responsibility in order to evaluate the effectiveness thereof.

There is thus an analysis of whether, based on the changing circumstances in which the companies of the Iberdrola group act (changes in organisation, systems, processes, products, regulation, etc.), changes in the risks identified and prioritised should be included and/or new risks should be identified. There is also an analysis of whether the design of the existing controls to mitigate or manage the risks that may have changed is appropriate, as well as whether they have operated satisfactorily in accordance with their design.

The conclusions from this annual review process, with respect to both the deficiencies identified (which are classified as high, medium or low, based precisely on their potential impact on the financial information) and the action plans to fix them, are presented at an annual specific meeting attended by the heads of Control of Iberdrola and of the various country subholding companies, the heads of the main corporate areas, of the Risk Management and Internal Assurance Division and of the Internal Audit Area. Conclusions are made at this meeting regarding the effectiveness of the Internal Control over Financial Reporting System (ICFRS) within each of the different areas of responsibility, and globally for the entire Iberdrola group.

Thereafter, the most significant conclusions regarding the review are submitted to the Committee within the framework of the regular meetings it holds with the Risk Management and Internal Assurance Director.

Apart from what is described in the preceding paragraphs, the Internal Audit Area, in support of the Committee, undertakes an independent review of the design and operation of the internal control system, identifying deficiencies and preparing recommendations for improvement. The Internal Audit Area is functionally subordinate to the Committee, and pursuant to the Basic Internal Audit Regulations has the main duties of assisting this committee in the exercise of its powers and objectively and independently supervising the effectiveness of the internal control system established at the Iberdrola group level, which is made up of a set of risk management and control mechanisms and systems.

Based thereon, the Internal Audit Area engages in ongoing monitoring of the action plans agreed to with the various organisations to correct the deficiencies detected and to implement the suggestions for improvement agreed to with the organisations.

The period that the Internal Audit Area plans for in-depth review of the entire internal control system is five years.

Specifically, 25 cycles were reviewed during financial year 2022. These are cycles corresponding to the companies “Iberdrola México, S.A. de C.V.”, “Scottish Power Ltd.”, “Iberdrola España, S.A.” (Sociedad Unipersonal), “Neoenergia S.A.”, “Iberdrola Energía Internacional, S.A.” (Sociedad Unipersonal) and “Iberdrola Inmobiliaria, S.A.”, as well as corporate cycles.

In addition, on a half-yearly basis, coinciding with the half-yearly and yearly close, the Internal Audit Area performs a review of the operation of the internal controls that are considered to be most critical, to which there should be added the annual review of all the SOX Key Controls of “Avangrid, Inc.”.

The combination of regular reviews, together with the half-yearly reviews of the most critical controls, allows the Internal Audit Area to perform an evaluation of the internal control system (both design and operation) and issue an opinion regarding the effectiveness of the internal controls established to ensure the reliability of the financial information, which it submits to the Committee within the framework of their regular meetings.

F.5.2 Whether there is a discussion procedure whereby the auditor (as defined in the Spanish Technical Audit Standards), the internal auditor and other experts can report to senior management and the audit committee or directors of the company any significant weaknesses in internal control identified during the review of the annual financial statements or any others they have been assigned. Additionally, state whether an action plan is available for correcting or mitigating any weaknesses detected.

In general terms, the procedure for discussion regarding significant internal control weaknesses that have been identified is based on regular meetings with the various players.
Thus, the Audit and Risk Supervision Committee (hereinafter, the “Committee”) holds meetings, both at the half-yearly and yearly close, with the external auditor, the Risk Management and Internal Assurance Division, the Internal Audit Area and the Administration and Control Division responsible for preparing the financial information, in order to discuss any relevant aspect of the preparation process and of the resulting financial information.

Specifically, as established in its Regulations (scope of powers), the Committee has, among other powers, that of obtaining information regarding any significant deficiency in internal control that the statutory auditor detects while carrying out its audit work. For these purposes, the statutory auditor appears before such Committee on an annual basis to present recommendations in connection with the internal control weaknesses identified during the review of the annual financial statements. Any weaknesses noted by the statutory auditor are continuously monitored by the Committee with the support of the Internal Audit Area. Management responsible for preparing the consolidated financial statements also holds meetings with the external auditors and with the internal auditors, at both the half-yearly and yearly close, in order to discuss any significant issues relating to the financial information.

F.6. Other relevant information.

Iberdrola has an Internal Control over Financial Reporting System (ICFRS) or model that is intended to reasonably guarantee the reliability of the financial information. The development of the model, which began in 2006, was not the result of a legal requirement but rather the conviction, by both the Board of Directors and the senior management of Iberdrola, that within a context of growth and internationalisation as was already forecast for the companies of the Iberdrola group, an explicit and auditable internal control system would contribute to maintaining and improving its control environment and the quality of the financial information, while at the same time increasing the confidence of investors due to its effects on the transparency, reputation and good governance of the Company and of the other companies making up the Iberdrola group.

The ICFRS has two main sides: certification, and internal control itself.

Certification is a half-yearly process managed and coordinated by the Risk Management and Internal Assurance Division in which those responsible for financial information in the different areas of the Iberdrola group certify that: (i) the financial information they deliver to Iberdrola for purposes of consolidation does not contain any material errors or omissions and provides a fair view of the results and the financial condition of the company within their area of responsibility, and (ii) they are responsible for establishing the ICFRS within their area of responsibility and have found, upon assessment, that the system is effective. The text of these certifications is inspired by the form of certification established in Section 302 of the U.S. Sarbanes-Oxley Act.

The culmination of the half-yearly process is a joint certification that the executive chairman and the General Finance, Control and Corporate Development Director (CFO) submit to the Board of Directors for purposes of approval of the half-yearly financial report or the formulation of the annual financial statements.

The process is carried out by means of electronic signature in a software application which manages the areas of responsibility and time periods and which serves as a repository of all the documentation generated, allowing for periodic review by the supervision and control bodies of the Iberdrola group’s companies.

The other side of the model, that of internal control itself, is inspired by the leading framework described in the “Internal Control Integrated Framework” report of the “Committee of Sponsoring Organizations of the Treadway Commission (COSO)”, and is mainly focused on providing a reasonable level of security in achieving the goal of reliability of financial information.

The methodology used by Iberdrola for the development and continuous update of internal control, the development, maintenance and update of which is the responsibility of the Risk Management and Internal Assurance Division, has the following stages or steps: (i) analysis and selection of significant financial information; (ii) the grouping thereof within cycles or large processes in which it is generated; (iii) the identification, evaluation and prioritisation of the risks of error in financial information within the selected cycles; (iv) the design and operation of controls to mitigate or manage the selected risks; and (v) the monitoring and update of the foregoing steps to continuously adapt the model to the circumstances of the business activity.

One of the main characteristics of the design of the model is that it attempts to ensure the quality of the financial information during each month of the year, and is not only limited to the periods corresponding to the yearly or half-yearly close. This characteristic is strengthened with the use of a specific software application internally developed by the Iberdrola group, which allows for the monitoring of the status of the controls at all times.
Another important characteristic of the model is that it extends the culture of internal control to all the organisations, both corporate and business, that significantly contribute to the generation of financial information, by personally assigning responsibility in the implementation and documentation of controls.

All significant documentation regarding Iberdrola’s ICFRS, including both the certification process and the internal control itself, is stored in this software application.

The people responsible for implementing the controls input into the software application evidence showing the performance thereof, and evaluate the results obtained, classifying them as satisfactory or unsatisfactory. This allows for monitoring of the internal control situation in real time, permitting quick action regarding any deficiencies detected.

Additionally, on an annual basis, the various heads of control at the country subholding and head of business companies, as well as the heads of the corporate areas, review the design and operation of the ICFRS, as a systematic process for the update thereof to the changing circumstances of the business activity.

The annual review is coordinated by the Risk Management and Internal Assurance Division, which is also tasked with administering the software application and with coordinating the development of the ICFRS within the various businesses and corporate areas of the Iberdrola group’s companies, as well as maintaining the homogeneity of the ICFRS throughout the boundary of the group. Based on this review, the Risk Management and Internal Assurance Division annually issues its opinion on the effectiveness of the ICFRS, which is communicated to the Internal Assurance Committee and to the Audit and Risk Supervision Committee (hereinafter, the “Committee”).

Furthermore, the Internal Audit Area, which is responsible for the independent supervision of internal control in support of the Committee, undertakes an independent review of the design and operation of the ICFRS, identifying deficiencies and preparing recommendations for improvement. This review is performed by applying a mixed model of selecting cycles based on risk and a minimum rotation of five years.

In addition, on a half-yearly basis, the Internal Audit Area undertakes an independent review of the effectiveness of the internal controls established to ensure the reliability of the financial information. It also reviews the process of certification of the financial information on a half-yearly basis. The conclusions from these reviews are submitted to the Committee, which, if applicable, makes them its own and forwards them to the Board of Directors.

Based on materiality standards, the current scope of the ICFRS covers the entire boundary of the Iberdrola group. More than 1,700 people from the group’s companies use the software application, both to document the evidence showing the implementation of more than 3,100 controls—which mitigate or manage more than 1,100 risks of error in the financial information deemed priority—and to monitor, analyse, adjust and evaluate the ICFRS.

In addition, the 120 department heads who participate in the process of certifying the correctness of the information for which they are responsible do so using an electronic signature directly within the software application.

All of the above allows for the final result of the certification process, which is supported by the situation of internal control itself, to be reviewed by Iberdrola’s Board of Directors as one of the major guarantees of reliability in connection with the formulation of the annual and interim financial information.

F.7. External auditor’s report.

Report:

F.7.1 Whether the ICFRS information sent to the markets has been subjected to review by the external auditor, in which case the entity should include the corresponding report as an attachment. If not, reasons why should be given.

The information on the ICFRS sent to the markets has not been subject to review by the external auditor consistent with the fact that the other information contained in the annual corporate governance report is only subject to review by the external auditor in relation to the accounting information contained in said report. Furthermore, it is believed that externally reviewing the information on the ICFRS sent to the markets would in a certain way be redundant, taking into account the review of internal control that the external auditor must perform in accordance with technical auditing standards within the context of the statutory audit of accounts.
G DEGREE OF COMPLIANCE WITH CORPORATE GOVERNANCE RECOMMENDATIONS

Specify the company’s degree of compliance with recommendations of the Good Governance Code for listed companies.

In the event that a recommendation is not followed or only partially followed, a detailed explanation of the reasons must be included so that shareholders, investors and the market in general have enough information to assess the company’s conduct. General explanations are not acceptable.

1. That the articles of incorporation of listed companies should not limit the maximum number of votes that may be cast by one shareholder or contain other restrictions that hinder the takeover of control of the company through the acquisition of its shares on the market.

Complies [ ] Explain [ X ]

Article 29.2 of the By-Laws provides that “No shareholder may cast a number of votes greater than those corresponding to shares representing ten (10%) per cent of share capital, even if the number of shares held exceeds such percentage of the share capital. This limitation does not affect votes corresponding to shares with respect to which a shareholder is holding a proxy as a result of the provisions of Article 23 above, provided, however, that with respect to the number of votes corresponding to the shares of each shareholder represented by proxy, the limitation set forth above shall apply”.

Section 3 of such article adds: “The limitation set forth in the preceding section shall also apply to the maximum number of votes that may be collectively or individually cast by two or more shareholders that are entities or companies belonging to the same group. Such limitation shall also apply to the number of votes that may be cast collectively or individually by an individual and the shareholder entity, entities, or companies controlled by such individual. A group shall be deemed to exist under the circumstances provided by law, and also when a person controls one or more entities or companies”.

Iberdrola believes that the limitation on the maximum number of votes that may be cast by a single shareholder, or by several shareholders belonging to the same group or, if applicable, acting in concert, is a measure to protect shareholders at companies with dispersed share ownership, whose investment is thus guarded from any transaction that is contrary to the corporate interest. In this regard, most shareholders, especially including but not limited to small retail investors, who represent approximately one-fourth of Iberdrola’s share capital, have little room to manoeuvre and respond to a potential shareholder owning a non-controlling interest and not reaching the threshold requiring a takeover bid but seeking influence over the Company and whose own interest is not totally in line with the corporate interest.

It should also be noted that such voting limitation has been in effect since 16 June 1990, the date on which the General Shareholders’ Meeting was held at which it was resolved, by unanimous vote of the attendees, to bring the By-Laws of the Company (then doing business as “Iberduero, S.A.”) into line with the consolidated text of the Companies Act approved by Royal Legislative Decree 1564/1989 of 22 December. This shows the level of corporate consensus that has existed on such voting limitation from the very beginning, which has been confirmed by the fact that such limitation has remained unchanged through various by-law amendments passed by the shareholders at General Shareholders’ Meetings. In turn, it reflects the will of the shareholders to increase their bargaining power in the event of hostile offers or transactions.

In any event, Article 50 of the current By-Laws establishes the instances of removal of such voting limitation in the event that the Company is the target of a takeover bid that receives the required shareholder approval, in which
case the provisions of Section 527 of the Companies Act prevail. Pursuant to the foregoing, it cannot be deemed that the limitation on the maximum number of votes that may be cast by a shareholder constitutes an obstacle to a takeover bid.

2. That when the listed company is controlled by another entity in the meaning of Article 42 of the Commercial Code, whether listed or not, and has, directly or through its subsidiaries, business relations with said entity or any of its subsidiaries (other than the listed company) or carries out activities related to those of any of them it should make accurate public disclosures on:

a) The respective areas of activity and possible business relationships between the listed company or its subsidiaries and the parent company or its subsidiaries.

b) The mechanisms in place to resolve any conflicts of interest that may arise.

Complies [ ] Complies partially [ ] Explain [ ] Not applicable [ X ]

3. That, during the ordinary General Shareholders’ Meeting, as a complement to the distribution of the written annual corporate governance report, the chairman of the Board of Directors should inform shareholders orally, in sufficient detail, of the most significant aspects of the company’s corporate governance, and in particular:

a) Changes that have occurred since the last General Shareholders’ Meeting.

b) Specific reasons why the company has not followed one or more of the recommendations of the Code of Corporate Governance and the alternative rules applied, if any.

Complies [X] Complies partially [ ] Explain [ ]

4. That the company should define and promote a policy on communication and contact with shareholders and institutional investors, within the framework of their involvement in the company, and with proxy advisors that complies in all aspects with rules against market abuse and gives equal treatment to similarly situated shareholders. And that the company should publish this policy on its website, including information on how it has been put into practice and identifying the contact persons or those responsible for implementing it.

And that, without prejudice to the legal obligations regarding dissemination of inside information and other types of regulated information, the company should also have a general policy regarding the communication of economic-financial, non-financial and corporate information through such channels as it may consider appropriate (communication media, social networks or other channels) that helps to maximise the dissemination and quality of information available to the market, investors and other stakeholders.

Complies [X] Complies partially [ ] Explain [ ]

5. That the Board of Directors should not submit to the General Shareholders’ Meeting any proposal for delegation of powers allowing the issue of shares or convertible
securities with the exclusion of preemptive rights in an amount exceeding 20% of the capital at the time of delegation.

And that whenever the Board of Directors approves any issue of shares or convertible securities with the exclusion of preemptive rights, the company should immediately publish the reports referred to by company law on its website.

Complies [X]  Complies partially [ ]  Explain [ ]

6. That listed companies that prepare the reports listed below, whether under a legal obligation or voluntarily, should publish them on their website with sufficient time before the General Shareholders’ Meeting, even if their publication is not mandatory:

a) Report on the auditor’s independence.

b) Reports on the workings of the audit and nomination and remuneration committees.

c) Report by the audit committee on related party transactions.

Complies [X]  Complies partially [ ]  Explain [ ]

7. That the company should transmit in real time, through its website, the proceedings of the General Shareholders’ Meetings.

And that the company should have mechanisms in place allowing the delegation and casting of votes by means of data transmission and even, in the case of large-caps and to the extent that it is proportionate, attendance and active participation in the General Meeting to be conducted by such remote means.

Complies [X]  Complies partially [ ]  Explain [ ]

8. That the audit committee should ensure that the financial statements submitted to the General Shareholders’ Meeting are prepared in accordance with accounting regulations. And that in cases in which the auditor has included a qualification or reservation in its audit report, the chairman of the audit committee should clearly explain to the general meeting the opinion of the audit committee on its content and scope, making a summary of this opinion available to shareholders at the time when the meeting is called, alongside the other Board proposals and reports.

Complies [X]  Complies partially [ ]  Explain [ ]

9. That the company should permanently publish on its website the requirements and procedures for certification of share ownership, the right of attendance at the General Shareholders’ Meetings, and the exercise of the right to vote or to issue a proxy.

www.iberdrola.com
And that such requirements and procedures promote attendance and the exercise of shareholder rights in a non-discriminatory fashion.

Complies [X]  Complies partially [ ]  Explain [ ]

10. That when a duly authenticated shareholder has exercised his or her right to complete the agenda or to make new proposals for resolutions in advance of the General Shareholders’ Meeting, the company:

a) Should immediately distribute such complementary points and new proposals for resolutions.

b) Should publish the attendance, proxy and remote voting card specimen with the necessary changes such that the new agenda items and alternative proposals can be voted on in the same terms as those proposed by the Board of Directors.

c) Should submits all these points or alternative proposals to a vote and apply the same voting rules to them as to those formulated by the Board of Directors including, in particular, assumptions or default positions regarding votes for or against.

d) That after the General Shareholders’ Meeting, a breakdown of the voting on said additions or alternative proposals be communicated.

Complies [X]  Complies partially [ ]  Explain [ ]  Not applicable [ ]

11. That if the company intends to pay premiums for attending the General Shareholders’ Meeting, it should establish in advance a general policy on such premiums and this policy should be stable.

Complies [X]  Complies partially [ ]  Explain [ ]  Not applicable [ ]

12. That the Board of Directors should perform its functions with a unity of purpose and independence of criterion, treating all similarly situated shareholders equally and being guided by the best interests of the company, which is understood to mean the pursuit of a profitable and sustainable business in the long term, promoting its continuity and maximising the economic value of the business.

And that in pursuit of the company’s interest, in addition to complying with applicable law and rules and conducting itself on the basis of good faith, ethics and a respect for commonly accepted best practices, it should seek to reconcile its own company interests, when appropriate, with the interests of its employees, suppliers, clients and other stakeholders that may be affected, as well as the impact of its corporate activities on the communities in which it operates and on the environment.

Complies [X]  Complies partially [ ]  Explain [ ]
13. That the Board of Directors should be of an appropriate size to perform its duties effectively and in a collegial manner, which makes it advisable for it to have between five and fifteen members.

Complies [X] Explain [ ]

14. That the Board of Directors should approve a policy aimed at favouring an appropriate composition of the Board and that:

a) Is concrete and verifiable;

b) Ensures that proposals for appointment or re-election are based upon a prior analysis of the skills required by the Board of Directors; and

c) Favours diversity of knowledge, experience, age and gender. For these purposes, it is considered that the measures that encourage the company to have a significant number of female senior executives favour gender diversity.

That the result of the prior analysis of the skills required by the Board of Directors be contained in the supporting report from the nomination committee published upon calling the General Shareholders’ Meeting to which the ratification, appointment or re-election of each director is submitted.

The nomination committee will annually verify compliance with this policy and explain its findings in the annual corporate governance report.

Complies [X] Complies partially [ ] Explain [ ]

15. That proprietary and independent directors should constitute a substantial majority of the Board of Directors and that the number of executive directors be kept to a minimum, taking into account the complexity of the corporate group and the percentage of equity participation of executive directors.

And that the number of female directors should represent at least 40% of the members of the Board of Directors before the end of 2022 and thereafter, and no less 30% prior to that date.

Complies [X] Complies partially [ ] Explain [ ]

16. That the number of proprietary directors as a percentage of the total number of non-executive directors not be greater than the proportion of the company’s share capital represented by those directors and the rest of the capital.

This criterion may be relaxed:

a) In large-cap companies where very few shareholdings are legally considered significant.

b) In the case of companies where a plurality of shareholders is represented on the Board of Directors without ties among them.
17. That the number of independent directors should represent at least half of the total number of directors.

That, however, when the company does not have a high level of market capitalisation or in the event that it is a large-cap company with one shareholder or a group of shareholders acting in concert who together control more than 30% of the company’s share capital, the number of independent directors should represent at least one third of the total number of directors.

18. That companies should publish the following information on its directors on their website, and keep it up to date:

a) Professional profile and biography.

b) Any other Boards to which the directors belong, regardless of whether or not the companies are listed, as well as any other remunerated activities engaged in, regardless of type.

c) Category of directorship, indicating, in the case of individuals who represent significant shareholders, the shareholder that they represent or to which they are connected.

d) Date of their first appointment as a director of the company’s Board of Directors, and any subsequent re-elections.

e) Company shares and share options that they own.

19. That the annual corporate governance report, after verification by the nomination committee, should explain the reasons for the appointment of any proprietary directors at the proposal of shareholders whose holding is less than 3%. It should also explain, if applicable, why formal requests from shareholders for presence on the Board were not honoured, when their shareholding was equal to or exceeded that of other shareholders whose proposal for proprietary directors was honoured.

20. That proprietary directors representing significant shareholders should resign from the Board when the shareholder they represent disposes of its entire shareholding. They should also resign, in a proportional fashion, in the event that said shareholder reduces its percentage interest to a level that requires a decrease in the number of proprietary directors.
21. That the Board of Directors should not propose the dismissal of any independent director before the completion of the director’s term provided for in the articles of incorporation unless the Board of Directors finds just cause and a prior report has been prepared by the nomination committee. Specifically, just cause is considered to exist if the director takes on new duties or commits to new obligations that would interfere with his or her ability to dedicate the time necessary for attention to the duties inherent to his or her post as a director, fails to complete the tasks inherent to his or her post, or is affected by any of the circumstances which would cause the loss of independent status in accordance with applicable law.

The dismissal of independent directors may also be proposed as a result of a public takeover bid, merger or other similar corporate transaction entailing a change in the shareholder structure of the company, provided that such changes in the structure of the Board are the result of application of the proportionate representation criterion provided in Recommendation 16.

Complies [X]    Explain [ ]

22. That companies should establish rules requiring that directors inform the Board of Directors and, where appropriate, resign from their posts, when circumstances arise which affect them, whether or not related to their actions in the company itself, and which may harm the company’s standing and reputation, and in particular requiring them to inform the Board of any criminal proceedings in which they appear as suspects or defendants, as well as of how the legal proceedings subsequently unfold.

And that, if the Board is informed or becomes aware in any other manner of any of the circumstances mentioned above, it must investigate the case as quickly as possible and, depending on the specific circumstances, decide, based on a report from the nomination and remuneration committee, whether or not any measure must be adopted, such as the opening of an internal investigation, asking the director to resign or proposing that he or she be dismissed. And that these events must be reported in the annual corporate governance report, unless there are any special reasons not to do so, which must also be noted in the minutes. This without prejudice to the information that the company must disseminate, if appropriate, at the time when the corresponding measures are implemented.

Complies [X]  Complies partially [ ]  Explain [ ]

23. That all directors clearly express their opposition when they consider any proposal submitted to the Board of Directors to be against the company’s interests. This particularly applies to independent directors and directors who are unaffected by a potential conflict of interest if the decision could be detrimental to any shareholders not represented on the Board of Directors.

Furthermore, when the Board of Directors makes significant or repeated decisions about which the director has serious reservations, the director should draw the appropriate conclusions and, in the event the director decides to resign, explain the reasons for this decision in the letter referred to in the next recommendation.
This recommendation also applies to the secretary of the Board of Directors, even if he or she is not a director.

Complies [ ]  Complies partially [ ]  Explain [ ]  Not applicable [ X ]

24. That whenever, due to resignation or resolution of the General Shareholders' Meeting, a director leaves before the completion of his or her term of office, the director should explain the reasons for this decision, or in the case of non-executive directors, their opinion of the reasons for cessation, in a letter addressed to all members of the Board of Directors.

And that, without prejudice to all this being reported in the annual corporate governance report, insofar as it is relevant to investors, the company must publish the cessation as quickly as possible, adequately referring to the reasons or circumstances adduced by the director.

Complies [X]  Complies partially [ ]  Explain [ ]  Not applicable [ ]

25. That the nomination committee should make sure that non-executive directors have sufficient time available in order to properly perform their duties.

And that the Board regulations establish the maximum number of company Boards on which directors may sit.

Complies [X]  Complies partially [ ]  Explain [ ]

26. That the Board of Directors meet frequently enough to be able to effectively perform its duties, and at least eight times per year, following a schedule of dates and agendas established at the beginning of the year and allowing each director individually to propose other items that do not originally appear on the agenda.

Complies [X]  Complies partially [ ]  Explain [ ]

27. That director absences occur only when absolutely necessary and be quantified in the annual corporate governance report. And when absences do occur, that the director appoint a proxy with instructions.

Complies [X]  Complies partially [ ]  Explain [ ]

28. That when directors or the secretary express concern regarding a proposal or, in the case of directors, regarding the direction in which the company is headed and said concerns are not resolved by the Board of Directors, such concerns should be included in the minutes at the request of the director expressing them.

Complies [ ]  Complies partially [ ]  Explain [ ]  Not applicable [ X ]

29. That the company should establishes adequate means for directors to obtain appropriate advice in order to properly fulfill their duties including, should circumstances warrant, external advice at the company’s expense.
30. That, without regard to the knowledge necessary for directors to complete their duties, companies make refresher courses available to them when circumstances make this advisable.

Complies [X]  Complies partially [ ]  Explain [ ]

31. That the agenda for meetings should clearly indicate those matters on which the Board of Directors is to make a decision or adopt a resolution so that the directors may study or gather all relevant information ahead of time.

When, in exceptional circumstances, the chairman wishes to bring urgent matters for decision or resolution before the Board of Directors which do not appear on the agenda, prior express agreement of a majority of the directors shall be necessary, and said consent shall be duly recorded in the minutes.

Complies [X]  Complies partially [ ]  Explain [ ]

32. That directors be periodically informed of changes in shareholding and of the opinions of significant shareholders, investors and rating agencies of the company and its group.

Complies [X]  Complies partially [ ]  Explain [ ]

33. That the chairman, as the person responsible for the efficient workings of the Board of Directors, in addition to carrying out the duties assigned by law and the articles of incorporation, should prepare and submit to the Board of Directors a schedule of dates and matters to be considered; organise and coordinate the periodic evaluation of the Board as well as, if applicable, the chief executive of the company, should be responsible for leading the Board and the effectiveness of its work; ensuring that sufficient time is devoted to considering strategic issues, and approve and supervise refresher courses for each director when circumstances make this advisable.

Complies [X]  Complies partially [ ]  Explain [ ]

34. That when there is a coordinating director, the articles of association or Board regulations should confer upon him or her the following powers in addition to those conferred by law: to chair the Board of Directors in the absence of the chairman and deputy chairmen, should there be any; to reflect the concerns of non-executive directors; to liaise with investors and shareholders in order to understand their points of view and respond to their concerns, in particular as those concerns relate to corporate governance of the company; and to coordinate a succession plan for the chairman.

Complies [X]  Complies partially [ ]  Explain [ ]  Not applicable [ ]
35. That the secretary of the Board of Directors should pay special attention to ensure that the activities and decisions of the Board of Directors take into account such recommendations regarding good governance contained in this Good Governance Code as may be applicable to the company.

Complies [X]   Explain [ ]

36. That the Board of Directors meet in plenary session once a year and adopt, where appropriate, an action plan to correct any deficiencies detected in the following:

a) The quality and efficiency of the Board of Directors’ work.

b) The workings and composition of its committees.

c) Diversity in the composition and skills of the Board of Directors.

d) Performance of the chairman of the Board of Directors and of the chief executive officer of the company.

e) Performance and input of each director, paying special attention to those in charge of the various Board committees.

In order to perform its evaluation of the various committees, the Board of Directors will take a report from the committees themselves as a starting point and for the evaluation of the Board, a report from the nomination committee.

Every three years, the Board of Directors will rely for its evaluation upon the assistance of an external advisor, whose independence shall be verified by the nomination committee.

Business relationships between the external adviser or any member of the adviser’s group and the company or any company within its group must be specified in the annual corporate governance report.

The process and the areas evaluated must be described in the annual corporate governance report.

Complies [X]   Complies partially [ ]   Explain [ ]

37. That if there is an executive committee, it must contain at least two non-executive directors, at least one of whom must be independent, and its secretary must be the secretary of the Board.

Complies [X]   Complies partially [ ]   Explain [ ]   Not applicable [ ]

38. That the Board of Directors must always be aware of the matters discussed and decisions taken by the executive committee and that all members of the Board of Directors receive a copy of the minutes of meetings of the executive committee.

Complies [X]   Complies partially [ ]   Explain [ ]   Not applicable [ ]
39. That the members of the audit committee, in particular its chairman, be appointed in consideration of their knowledge and experience in accountancy, audit and risk management issues, both financial and non-financial.

Complies [X]  Complies partially [ ]  Explain [ ]

40. That under the supervision of the audit committee, there should be a unit in charge of the internal audit function, which ensures that information and internal control systems operate correctly, and which reports to the non-executive chairman of the Board or of the audit committee.

Complies [X]  Complies partially [ ]  Explain [ ]

41. That the person in charge of the unit performing the internal audit function should present an annual work plan to the audit committee, for approval by that committee or by the Board, reporting directly on its execution, including any incidents or limitations of scope, the results and monitoring of its recommendations, and present an activity report at the end of each year.

Complies [X]  Complies partially [ ]  Explain [ ]  Not applicable [ ]

42. That in addition to the provisions of applicable law, the audit committee should be responsible for the following:

1. With regard to information systems and internal control:

   a) Supervising and evaluating the process of preparation and the completeness of the financial and non-financial information, as well as the control and management systems for financial and non-financial risk relating to the company and, if applicable, the group - including operational, technological, legal, social, environmental, political and reputational risk, or risk related to corruption - reviewing compliance with regulatory requirements, the appropriate delimitation of the scope of consolidation and the correct application of accounting criteria.

   b) Ensuring the independence of the unit charged with the internal audit function; proposing the selection, appointment and dismissal of the head of internal audit; proposing the budget for this service; approving or proposing its orientation and annual work plans for approval by the Board, making sure that its activity is focused primarily on material risks (including reputational risk); receiving periodic information on its activities; and verifying that senior management takes into account the conclusions and recommendations of its reports.

   c) Establishing and supervising a mechanism that allows employees and other persons related to the company, such as directors, shareholders, suppliers, contractors or subcontractors, to report any potentially serious irregularities, especially those of a financial or accounting nature, that they observe in the company or its group. This mechanism must guarantee confidentiality and in any case provide for cases in which the communications can be made
anonymously, respecting the rights of the whistleblower and the person reported.

d) Generally ensuring that internal control policies and systems are effectively applied in practice.

2. With regard to the external auditor:

a) In the event that the external auditor resigns, examining the circumstances leading to such resignation.

b) Ensuring that the remuneration paid to the external auditor for its work does not compromise the quality of the work or the auditor’s independence.

c) Making sure that the company informs the CNMV of the change of auditor, along with a statement on any differences that arose with the outgoing auditor and, if applicable, the contents thereof.

d) Ensuring that the external auditor holds an annual meeting with the Board of Directors in plenary session in order to make a report regarding the tasks performed and the development of the company’s accounting situation and risks.

e) Ensuring that the company and the external auditor comply with applicable rules regarding the provision of services other than auditing, limits on the concentration of the auditor’s business, and, in general, all other rules regarding auditors’ independence.

Complies [X] Complies partially [ ] Explain [ ]

43. That the audit committee be able to require the presence of any employee or manager of the company, even stipulating that he or she appear without the presence of any other member of management.

Complies [X] Complies partially [ ] Explain [ ]

44. That the audit committee be kept abreast of any corporate and structural changes planned by the company in order to perform an analysis and draw up a prior report to the Board of Directors on the economic conditions and accounting implications and, in particular, any exchange ratio involved.

Complies [X] Complies partially [ ] Explain [ ] Not applicable [ ]

45. That the risk management and control policy identify or determine, as a minimum:

a) The various types of financial and non-financial risks (including operational, technological, legal, social, environmental, political and reputational risks and risks relating to corruption) which the company faces, including among the financial or economic risks contingent liabilities and other off-balance sheet risks.
b) A risk control and management model based on different levels, which will include a specialised risk committee when sector regulations so require or the company considers it to be appropriate.

c) The level of risk that the company considers to be acceptable.

d) Measures in place to mitigate the impact of the risks identified in the event that they should materialised.

e) Internal control and information systems to be used in order to control and manage the aforementioned risks, including contingent liabilities or off-balance sheet risks.

46. That under the direct supervision of the audit committee or, if applicable, of a specialised committee of the Board of Directors, an internal risk control and management function should exist, performed by an internal unit or department of the company which is expressly charged with the following responsibilities:

a) Ensuring the proper functioning of the risk management and control systems and, in particular, that they adequately identify, manage and quantify all material risks affecting the company.

b) Actively participating in drawing up the risk strategy and in important decisions regarding risk management.

c) Ensuring that the risk management and control systems adequately mitigate risks as defined by the policy laid down by the Board of Directors.

47. That in designating the members of the nomination and remuneration committee – or of the nomination committee and the remuneration committee if they are separate – care be taken to ensure that they have the knowledge, aptitudes and experience appropriate to the functions that they are called upon to perform and that the majority of said members are independent directors.

48. That large-cap companies have separate nomination and remuneration committees.

49. That the nomination committee consult with the chairman of the Board of Directors and the chief executive of the company, especially in relation to matters concerning executive directors.
And that any director be able to ask the nomination committee to consider potential candidates that he or she considers suitable to fill a vacancy on the Board of Directors.

Complies [X] Complies partially [ ] Explain [ ]

50. That the remuneration committee exercise its functions independently and that, in addition to the functions assigned to it by law, it should be responsible for the following:

a) Proposing the basic conditions of employment for senior management to the Board of Directors.

b) Verifying compliance with the company's remuneration policy.

c) Periodically reviewing the remuneration policy applied to directors and senior managers, including share-based remuneration systems and their application, as well as ensuring that their individual remuneration is proportional to that received by the company's other directors and senior managers.

d) Making sure that potential conflicts of interest do not undermine the independence of external advice given to the committee.

e) Verifying the information on remuneration of directors and senior managers contained in the various corporate documents, including the annual report on director remuneration.

Complies [X] Complies partially [ ] Explain [ ]

51. That the remuneration committee should consult with the chairman and the chief executive of the company, especially on matters relating to executive directors and senior management.

Complies [X] Complies partially [ ] Explain [ ]

52. That the rules regarding the composition and workings of the supervision and control committees should appear in the regulations of the Board of Directors and that they should be consistent with those applying to legally mandatory committees in accordance with the foregoing recommendations, including:

a) That they be composed exclusively of non-executive directors, with a majority of independent directors.

b) That their chairpersons be independent directors.

c) That the Board of Directors select members of these committees taking into account their knowledge, skills and experience and the duties of each committee; discuss their proposals and reports; and require them to render account of their activities and of the work performed in the first plenary session of the Board of Directors held after each committee meeting.
d) That the committees be allowed to avail themselves of outside advice when they consider it necessary to perform their duties.

e) That their meetings be recorded and their minutes be made available to all directors.

Complies [X]     Complies partially [ ]     Explain [ ]     Not applicable [ ]

53. That verification of compliance with the company's policies and rules on environmental, social and corporate governance matters, and with the internal codes of conduct be assigned to one or divided among more than one committee of the Board of Directors, which may be the audit committee, the nomination committee, a specialised committee on sustainability or corporate social responsibility or such other specialised committee as the Board of Directors, in the exercise of its powers of self-organisation, may have decided to create. And that such committee be composed exclusively of non-executive directors, with a majority of these being independent directors, and that the minimum functions indicated in the next recommendation be specifically assigned to it.

Complies [X]     Complies partially [ ]     Explain [ ]

54. The minimum functions referred to in the foregoing recommendation are the following:

a) Monitoring of compliance with the company's internal codes of conduct and corporate governance rules, also ensuring that the corporate culture is aligned with its purpose and values.

b) Monitoring the application of the general policy on communication of economic and financial information, non-financial and corporate information and communication with shareholders and investors, proxy advisors and other stakeholders. The manner in which the entity communicates and handles relations with small and medium-sized shareholders must also be monitored.

c) The periodic evaluation and review of the company’s corporate governance system, and environmental and social policy, with a view to ensuring that they fulfill their purposes of promoting the interests of society and take account, as appropriate, of the legitimate interests of other stakeholders.

d) Supervision of the company's environmental and social practices to ensure that they are in alignment with the established strategy and policy.

e) Supervision and evaluation of the way in which relations with the various stakeholders are handled.

Complies [X]     Complies partially [ ]     Explain [ ]

55. That environmental and social sustainability policies identify and include at least the following:
a) The principles, commitments, objectives and strategy relating to shareholders, employees, clients, suppliers, social issues, the environment, diversity, tax responsibility, respect for human rights, and the prevention of corruption and other unlawful conduct.

b) Means or systems for monitoring compliance with these policies, their associated risks, and management.

c) Mechanisms for supervising non-financial risk, including that relating to ethical aspects and aspects of business conduct.

d) Channels of communication, participation and dialogue with stakeholders.

e) Responsible communication practices that impede the manipulation of data and protect integrity and honour.

Complies [X]    Complies partially [ ]    Explain [ ]

56. That director remuneration be sufficient in order to attract and retain directors who meet the desired professional profile and to adequately compensate them for the dedication, qualifications and responsibility demanded of their posts, while not being so excessive as to compromise the independent judgement of non-executive directors.

Complies [X]    Explain [ ]

57. That only executive directors should receive variable remuneration linked to corporate results and personal performance, as well as remuneration in the form of shares, options or rights to shares or instruments referenced to the share price and long-term savings plans such as pension plans, retirement schemes or other provident schemes.

Consideration may be given to delivering shares to non-executive directors as remuneration providing this is conditional upon their holding them until they cease to be directors. The foregoing shall not apply to shares that the director may need to sell in order to meet the costs related to their acquisition.

Complies [X]    Complies partially [ ]    Explain [ ]

58. That as regards variable remuneration, remuneration policies should incorporate the necessary limits and technical safeguards to ensure that such remuneration is in line with the professional performance of its beneficiaries and not based solely on general developments in the markets or in the sector in which the company operates, or other similar circumstances.

And, in particular, that variable remuneration components:

a) Are linked to pre-determined and measurable performance criteria and that such criteria take into account the risk incurred to achieve a given result.
b) Promote the sustainability of the company and include non-financial criteria that are geared towards creating long term value, such as compliance with the company’s rules and internal operating procedures and with its risk management and control policies.

c) Are based on balancing the attainment of short-, medium- and long-term objectives, so as to allow remuneration of continuous performance over a period long enough to be able to assess its contribution to the sustainable creation of value, such that the elements used to measure performance are not associated only with one-off, occasional or extraordinary events.

Complies [X]  Complies partially [ ]  Explain [ ]  Not applicable [ ]

59. That the payment of variable remuneration components be subject to sufficient verification that previously established performance or other conditions have effectively been met. Entities must include in their annual report on director remuneration the criteria for the time required and methods used for this verification depending on the nature and characteristics of each variable component.

That, additionally, companies consider the inclusion of a reduction (‘malus’) clause for the deferral of the payment of a portion of variable remuneration components that would imply their total or partial loss if an event were to occur prior to the payment date that would make this advisable.

Complies [X]  Complies partially [ ]  Explain [ ]  Not applicable [ ]

60. That remuneration related to company results should take into account any reservations that might appear in the external auditor’s report and that would diminish said results.

Complies [X]  Complies partially [ ]  Explain [ ]  Not applicable [ ]

61. That a material portion of executive directors’ variable remuneration be linked to the delivery of shares or financial instruments referenced to the share price.

Complies [X]  Complies partially [ ]  Explain [ ]  Not applicable [ ]

62. That once shares or options or financial instruments have been allocated under remuneration schemes, executive directors be prohibited from transferring ownership or exercising options or rights until a term of at least three years has elapsed.

An exception is made in cases where the director has, at the time of the transfer or exercise of options or rights, a net economic exposure to changes in the share price for a market value equivalent to at least twice the amount of his or her fixed annual remuneration through the ownership of shares, options or other financial instruments.
The forgoing shall not apply to shares that the director may need to sell in order to meet the costs related to their acquisition or, following a favourable assessment by the nomination and remuneration committee, to deal with such extraordinary situations as may arise and so require.

Complies [X]  Complies partially [ ]  Explain [ ]  Not applicable [ ]

63. That contractual arrangements should include a clause allowing the company to demand reimbursement of the variable remuneration components in the event that payment was not in accordance with the performance conditions or when payment was made based on data subsequently shown to have been inaccurate.

Complies [X]  Complies partially [ ]  Explain [ ]  Not applicable [ ]

64. That payments for contract termination should not exceed an amount equivalent to two years of total annual remuneration and should not be paid until the company has been able to verify that the director has fulfilled all previously established criteria or conditions for payment.

For the purposes of this recommendation, payments for contractual termination will be considered to include any payments the accrual of which or the obligation to pay which arises as a consequence of or on the occasion of the termination of the contractual relationship between the director and the company, including amounts not previously vested of long-term savings schemes and amounts paid by virtue of post-contractual non-competition agreements.

Complies [ ]  Complies partially [X]  Explain [ ]  Not applicable [ ]

Contracts with executive directors and senior officers signed as from 2011 provide severance pay for contractual termination equal to a maximum of two times annual salary in the event of termination of their relationship with the Company, provided that termination of the relationship is not the result of a breach attributable thereto or solely due to a voluntary decision thereof. This is the case of the current chief executive officer.

The Company included guarantee clauses of up to five years in contracts with its key officers in the year 2000. Subsequently, in 2001, when the current executive chairman joined Iberdrola, he received the treatment in effect for such officers, in order to achieve an effective and sufficient level of loyalty. As executive chairman, he is currently entitled to three times his annual salary for this item, plus another two times annual salary for his non-compete commitment.

The Board of Directors has analysed this situation, the treatment of which is necessarily collective in nature. Any reduction in the salary multiples would carry high costs for the Company, for which reason the Board of Directors believes that it is most appropriate not to change the status quo. Any proposed reduction in the salary multiples would have a higher cost for the Company, as the amount of the contingency will gradually decrease due to the passage of time, resulting in payments far smaller than any possible reduction in the agreed severance payment, taking into account the average age of the affected group and the low likelihood of the guarantees being enforced. In this regard, it should be pointed out that the number of officers with a right to severance pay greater than two years continues to decrease in recent years, without the execution of any guarantee clause. At year-end 2003, there were 89 officers with that right, while only 12 remained as at 31 December 2022, representing 1.66% of the Iberdrola group’s officers and other professionals with management responsibilities. The 12 officers who are beneficiaries of such severance pay will reach the legal retirement age in the next five years, with only two exceptions.
H FURTHER INFORMATION OF INTEREST

1. If there is any significant aspect regarding corporate governance in the company or other companies in the group that has not been included in other sections of this report, but which it is necessary to include in order to provide a more comprehensive and reasoned picture of the structure and governance practices in the company or its group, describe them briefly below.

2. This section may also be used to provide any other information, explanation or clarification relating to previous sections of the report, so long as it is relevant and not repetitive.

Specifically, indicate whether the company is subject to any corporate governance legislation other than that of Spain and, if so, include any information required under this legislation that differs from the data required in this report.

3. The company may also indicate whether it has voluntarily subscribed to other ethical or best practice codes, whether international, sector-based, or other. In such case, name the code in question and the date on which the company subscribed to it. Specific mention must be made as to whether the company adheres to the Code of Good Tax Practices of 20 July 2010.

On 20 July 2010 the Company adhered to the Code of Good Tax Practices approved by the full Forum of Large Businesses (Foro de Grandes Empresas) established on 10 June 2009 at the behest of the National Tax Administration Agency (Agencia Estatal de Administración Tributaria).

Pursuant to the provisions of Sections 1 and 2 of the Code of Good Tax Practices and Sections 3 and 4 of the Corporate Tax Policy, the Company reports that it has complied with the text of said code as from the time of approval thereof.

In particular, it is reported that during financial year 2022, the Company’s tax director appeared before Iberdrola’s Audit and Risk Supervision Committee on 21 February and 22 July to report on, among other issues, the level of compliance with the Corporate Tax Policy, which includes the good tax practices contained in said code, all of which has been reported to the Board of Directors.

Furthermore, on 25 October 2022 the Company voluntarily submitted to the National Tax Administration Agency the Annual Tax Transparency Report for financial year 2021 for companies that have adhered to the Good Tax Practices Code, pursuant to the Annex to the Good Tax Practices Code approved in order to strengthen the relationship of cooperation and good practices in the area of corporate tax transparency, which report has been regularly submitted since the launch of this initiative in 2016.

This Annual Corporate Governance Report was approved by the Board of Directors of the company at the meeting held on:

21/02/2023.

Indicate whether any director voted against or abstained from approving this report.

SECTION C.1.6

Set out below is a description of the resolutions on appointment, ratification and re-election of directors, adopted in accordance with the Board of Directors Diversity and Member Selection Policy and pursuant to which the Company has reached the current balanced presence of women and men on the Board of Directors:

- Appointment and re-elections of Ms María Helena Antolín Raybaud, with the classification of independent director, approved by the shareholders at the General Shareholders’ Meetings held on 26 March 2010, 27 March 2015 and 29 March 2019. She is currently classified as other external director because more than twelve years have passed since she was first appointed, and she is a member of the Appointments Committee.

- Appointment of Ms Sara de la Rica Goiricelaya, with the classification of independent director, approved by the shareholders at the General Shareholders’ Meeting held on 29 March 2019. She is the chair of the Sustainable Development Committee.

- Appointment of Ms Nicola Mary Brewer, with the classification of independent director, approved by the shareholders at the General Shareholders’ Meeting held on 2 April 2020. Member of the Sustainable Development Committee.

- Appointment of Ms Regina Helena Jorge Nunes, with the classification of independent director, approved by the shareholders at the General Shareholders’ Meeting held on 2 April 2020. Member of the Audit and Risk Supervision Committee.

- Appointment of Ms María Ángeles Alcalá Díaz, with the classification of independent director, approved by the Board of Directors on an interim basis (co-option procedure) on 26 October 2021. Her appointment was ratified and she was re-elected as a director by the shareholders acting at the General Shareholders’ Meeting held on 17 June 2022, and she was a member of the Audit and Risk Supervision Committee at financial year-end 2022.

- Appointment of Ms Isabel García Tejerina, with the classification of independent director, approved by the Board of Directors on an interim basis (co-option procedure) on 16 December 2021. Her appointment was ratified and she was re-elected as a director by the shareholders acting at the General Shareholders’ Meeting held on 17 June 2022, and she is currently a member of the Sustainable Development Committee.
SECTION C.1.26

Below is the data on attendance of the directors at the meetings of the Board of Directors and its committees during financial year 2022. Proxies granted with specific voting instructions are considered to be attendances.

Notes:

Mr Armando Martínez Martínez was appointed as a director on an interim basis (co-option procedure) on 25 October 2022. The denominator indicates the number of meetings held during the period of the year in which the director served as such or as a member of the respective committee.

EC: Executive Committee.
ARSC: Audit and Risk Supervision Committee.
AC: Appointments Committee.
RC: Remuneration Committee.
SDC: Sustainable Development Committee.
SECTION C.1.29

As of 31 December 2022, the Secretary of the Board of Directors was Mr Julián Martínez-Simancas Sánchez. However, at its meeting held on 25 October 2022, the Board of Directors accepted the resignation of Mr Martínez-Simancas Sánchez from his position as non-director secretary and resolved to approve his cessation of office effective 1 January 2023. At the proposal of the executive chairman and following a favourable report from the Appointments Committee, the Board of Directors also resolved to appoint Mr Santiago Martínez Garrido as non-director secretary of the Board of Directors, effective 1 January 2023.

SECTION C.1.32

Non-audit services provided by the KPMG group to the companies of the Iberdrola group during financial year 2022 mainly had the following scope:

- To the Company: limited review of the half-yearly financial statements in the amount of €1,248,567; issuance of two comfort letters within the framework of issues under the EMTN programme, in the amount of €75,000 and €70,000; issuance of a report on verification of the Statement of Non-Financial Information 2021, in the amount of €108,586; and preparation of two procedures reports on the liquidity situation for the offshore Wikinger and Baltic wind farms in the amount of €8,747 each.

- To “i-DE Redes Eléctricas Inteligentes, S.A.” (Sociedad Unipersonal) (“i-DE”), “Conquense Distribución Eléctrica, S.A.” (Sociedad Unipersonal) and “Anselmo León Distribución, S.A.” (Sociedad Unipersonal): performance of regulatory audits on the operating facilities, the commissioned facilities and the forms required by CNMC Circular 4/2015, in the total amount of €501,070.

- To i-DE: report on agreed-upon procedures regarding the disclosure of investments that it must submit to the CNMC in compliance with Royal Decree 1125/2021 of 21 December, in the amount of €100,000.

- To “Iberdrola Finanzas, S.A.” (Sociedad Unipersonal): issuance of two comfort letters within the framework of issues under the EMTN programme, in the amount of €20,000 each.

- To “Iberdrola Renovables Internacional, S.A.” (Sociedad Unipersonal): report on corporate services invoiced to subsidiaries, in the amount of €13,195.

- To “Iberdrola Generación Nuclear, S.A.” (Sociedad Unipersonal) and “Iberdrola Generación, S.A.” (Sociedad Unipersonal): limited review of the financial statements at 30 June and 30 September 2022, in accordance with the General Chart of Accounts (“Plan General de Contabilidad”), in the amount of €12,100 in each case.
– To “Iberdrola Renovables Energía, S.A.” (Sociedad Unipersonal): report on agreed procedures regarding corporate charges invoiced to subsidiaries, in the amount of €9,000.

– To “Iberdrola España, S.A.” (Sociedad Unipersonal) and its subsidiaries: limited review of the consolidated financial statements at 30 June 2022, in accordance with the IFRS, in the amount of €6,619.

– To “Avangrid, Inc.”: regulatory audit to comply with the requirements of the U.S. regulator, in the amount of US$218,703; preparation of a comfort letter within the framework of a debt issue by “New York State Electric & Gas Corporation”, including, if applicable, a review of financial statements, in the amount of US$135,000; review of documentation as a consequence of a change of auditor, in the amount of US$20,000; and generic accountancy training services, provided free of charge.

– To “Neoenergia S.A.” and its subsidiaries: quarterly review for 2021, in the amount of R$680,846; audit of regulatory financial statements for 2021, in the amount of R$137,253; preparation of an equity control report for financial year 2021, in the amount of R$82,178; reports on financial rations in support of financing agreements, in the total amount of R$54,209; and procedures regarding estimated cash flows relating to the distribution of dividends for financial year 2021, in the amount of R$18,454.

– To “Iberdrola México, S.A. de C.V.” and its subsidiaries: report on the review of the tax status of the taxpayer (scope review), in the amount of MX$3,486,303.

– To the group led by “Scottish Power Limited”: audit of the regulatory segmented consolidated financial statements, in the amount of £28,209; and regulatory audit of the companies “SP MAnweb, Plc.”, “SP Transmission, Plc.” and “SP Distribution, Plc.” prepared for the British regulator, in the amount of £19,981; and regulatory audit reports on Client Assets Sourcebook, prepared for the regulator and requested by “Scottish Power Energy Management (Agency) Ltd.”, in the amount of £15,280.

– To “Iberdrola Clienti Italia, S.R.L.”: audit of the financial statements prepared in accordance with regulatory requirements, in the amount of €56,755; and report on general system charges required by the Italian regulator, in the amount of €55,000.

– Several subsidiaries of “C. Rokas Industrial Commercial Company, S.A.”: verification of tax information, in the amount of €95,052.

– To “Iberdrola Energie France, S.A.S.”: report on agreed-upon procedures regarding the certification of non-payment of the system’s usage charges, in the amount of €16,340.

– To “Iberdrola Australia RE”: the issuance of a reasonable assurance report on the financial statements and internal control required for the Australian Financial Services Licence for companies operating with financial instruments, in the amount of AUS$8,522.

– To “Iberdrola RE, S.A.”: special report in compliance with the instructions of the Luxembourg securities market regulator, in the amount of €1,700.
As regards the performance of the duties of the Audit and Risk Supervision Committee (the "Committee") relating to the provision of non-audit services by the KPMG group, it should be noted, as indicated in section C.1.30 of this report, that in order to approve the aforementioned provision of services, an evaluation was made as to whether the audit firm was the most suitable to provide them. Prior to each of the meetings of the Committee discussing the engagement of KPMG for the provision of non-audit services, the following was made available to the committee: (i) a letter from KPMG addressed to the chair of the Committee in order to request approval for the provision of the service in question, in which the statutory auditor confirmed that the provision of this service would not disqualify it or threaten its independence; and (ii) a presentation by the Internal Audit Area describing the main characteristics and terms and conditions of the service, stating that the provision thereof did not threaten the independence of the auditor and confirming that it had been pre-approved by the audit and compliance committee of the company receiving the service or, if applicable, of the parent country subholding company.

Finally, at its meeting of 19 December 2016, the Committee agreed to pre-authorise the statutory auditor to carry out the following activities, as it considered them to be unquestionably related to the audit of accounts: (i) the preparation of comfort letters and, where appropriate, consent letters for securities issues; (ii) the issue of reports on compliance with ratios linked to financing agreements; and (iii) the performance of limited reviews of interim financial statements. Therefore, the engagement of KPMG for the provision of such services was deemed to have been approved by the committee, so that the Committee henceforth only needs to be informed of the commencement of the provision of such services at its next meeting (to take note of this and to verify that the limits on the fees that the statutory auditor may charge for the provision of additional services are not exceeded).
The disclosures contained in this section of the Management Report are the same as the disclosures in the Annual Report on Remuneration sent separately to the Spanish National Securities Market Commission for publication at [www.cnmv.es](http://www.cnmv.es).
ISSUER IDENTIFICATION DETAILS

YEAR END-DATE: 31/12/2022

Company name: IBERDROLA, S.A.

Registered office: Plaza Euskadi número 5, 48009 Bilbao (Biscay), Spain
A REMUNERATION POLICY OF THE COMPANY FOR THE CURRENT FINANCIAL YEAR

A.1.1 Explain the current director remuneration policy applicable to the year in progress. To the extent that it is relevant, certain information may be included in relation to the remuneration policy approved by the General Shareholders’ Meeting, provided that these references are clear, specific and concrete.

Such specific determinations for the current year as the board may have made in accordance with the contracts signed with the executive directors and with the remuneration policy approved by the General Shareholders’ Meeting must be described, as regards directors’ remuneration both in their capacity as such and for executive functions carried out.

In any case, the following aspects must be reported, as a minimum:

a) Description of the procedures and company bodies involved in determining, approving and applying the remuneration policy and its terms and conditions.

b) Indicate and, where applicable, explain whether comparable companies have been taken into account in order to establish the company’s remuneration policy.

c) Information on whether any external advisors took part in this process and, if so, their identity.

d) Procedures set forth in the current remuneration policy for directors in order to apply temporary exceptions to the policy, conditions under which those exceptions can be used and components that may be subject to exceptions according to the policy.

As of the date of preparation of this Report, the Director Remuneration Policy in effect (hereinafter, the Policy or the Remuneration Policy) is the Policy approved by the shareholders at the General Shareholders’ Meeting held on 18 June 2021 and which has been in force since the financial year of its approval and will be in force during financial years 2022, 2023 and 2024. This Remuneration Policy is based on the following four principles:

a) Market remuneration that attracts and retains talent, adequately rewards the dedication and responsibility assumed by the directors, and is commensurate with
the remuneration paid at comparable companies in the market, for which purpose regular benchmark analyses will be performed.

b) **Focused on maximising the creation of value and committed to the Purpose and Values of the Iberdrola group and to long-term sustainability**, which allows for maximising the social dividend and shareholder return as well as the achievement of the Company’s long-term sustainability. All of the foregoing within the framework of the Iberdrola group’s commitment to all of its Stakeholders.

c) **Focused on objectives**, ensuring that remuneration contributes to the achievement of Iberdrola’s strategic objectives, which are regularly published and updated by the Board of Directors.

d) **Aligned with the long-term strategy and sustainability**, through the attraction, retention, motivation and development of the best talent, on fair and competitive terms, which is the best way to contribute to the business strategy and to the long-term interests and sustainability of the Company and of the Iberdrola group.

Shareholders’ votes in favour reached 91.54%. The Remuneration Committee relied on the outside advice of Sagardoy Abogados in preparing the Policy, including aspects such as the compliance of the remuneration policy with the new applicable law.

The design of this Policy took into account the main demands from institutional investors as well as the good practices identified at other listed companies.

**Benchmark companies for remuneration purposes**

Companies from the Utilities sector were taken into account in preparing this Policy, and specifically to define the remuneration items: companies listed on the Stoxx Europe 600 and S&P 500 Utilities indices, and companies belonging to the European Round Table of Industrialists and Business Round Table, excluding companies in which there is State involvement in terms of management or ownership. A multi-sector sample was also used: companies listed on the FTSE Eurotop 100 and S&P 500 indices, and companies belonging to the European Round Table of Industrialists and Business Round Table, with a comparable international presence and geographic diversity to IBERDROLA. And finally, leading Ibex 35 companies by capitalisation and European companies positioned to tackle the energy transition.

The criteria taken into consideration to select the companies were based on companies with similar dimensions to Iberdrola in terms of capitalisation, size, ownership structure and international scope.
This Policy takes into account talent, effort, creativity and leadership as the main differentiating elements in the energy industry, in order to maximise the social dividend and shareholder return and to contribute to the achievement of the Company’s strategic objectives. Its ultimate goal is to contribute decisively to the attraction, retention, motivation and development of the best talent, on fair and competitive terms.

**Competent bodies involved in determining, approving and applying the remuneration policy and the terms and conditions thereof:**

The approval of the Director Remuneration Policy is within the purview of the shareholders at the General Shareholders’ Meeting. To this end, the Remuneration Committee, pursuant to the provisions of Article 3 of the Regulations thereof, proposes to the Board of Directors the remuneration policies applicable to the directors and to the members of senior management and regularly revises them, proposing, if applicable, the amendment and update thereof to the Board of Directors.

The Remuneration Committee submits the proposed Director Remuneration Policy to the Board of Directors for approval and subsequent submission to the shareholders at the General Shareholders’ Meeting, issuing the corresponding specific explanatory report required by Section 529 novodecies of the Companies Act (Ley de Sociedades de Capital). The Remuneration Committee is also vested with the duty to propose to the Board of Directors the system and amount of the annual remuneration of directors, as well as the individual remuneration of executive directors and the other basic terms and conditions of their contracts, including any potential compensation or severance payment that may be established in the event of removal, in all cases in accordance with the provisions of the Governance and Sustainability System and of the Remuneration Policy.

The Board of Directors, upon a proposal of the Remuneration Committee, sets the remuneration of directors, except the remuneration consisting of the delivery of shares of the Company or of options thereon or which is indexed to the price of the Company’s shares, which must be approved by the shareholders acting at a General Shareholders’ Meeting.

Finally, the executive directors’ performance is evaluated by the Board of Directors, upon a proposal of the Remuneration Committee. This Committee is in turn customarily advised by an independent firm that evaluates such performance.

**A.1.2 Relative importance of variable remuneration items vis-à-vis fixed remuneration (remuneration mix) and the criteria and objectives taken into consideration in their determination and to ensure an appropriate balance between the fixed and variable components of remuneration. In particular, indicate the actions taken by the company in relation to the remuneration system to reduce exposure to excessive risks and to align it with the long-term objectives, values and interests of the company, which will include,**
as the case may be, mention of the measures taken to ensure that the long-term results of the company are taken into account in the remuneration policy, the measures adopted in relation to those categories of personnel whose professional activities have a material impact on the risk profile of the company and measures in place to avoid conflicts of interest.

Furthermore, indicate whether the company has established any period for the accrual or vesting of certain variable remuneration items, in cash, shares or other financial instruments, any deferral period in the payment of amounts or delivery of accrued and vested financial instruments, or whether any clause has been agreed reducing the deferred remuneration not yet vested or obliging the director to return remuneration received, when such remuneration has been based on figures that have since been clearly shown to be inaccurate.

**Remuneration mix**

The remuneration mix of executive directors at Iberdrola is comprised of both short- and long-term fixed and variable components and is designed in such a way as to ensure the attraction and retention of the best talent and the alignment of their conduct with the interests of the Iberdrola group and the achievement of its business strategy, promoting its long-term sustainability, in accordance with best practices at the domestic and the international level.

This remuneration mix is strongly impacted by the significance of the variable components, and particularly by the assessment made by the Board of Directors, upon a proposal of the Remuneration Committee, of the performance of said directors, as well as of the changes in value of any shares to be delivered in payment of the multi-annual variable remuneration. Particularly noteworthy is the progressive increase in the specific weight of this component due to the significant increase in the share price, as explained in section B.7 of this report. It should also be noted that annual and multi-annual variable remuneration is linked to the performance of the executive directors with respect to economic/financial, operational/industrial and other parameters relating to the Sustainable Development Goals.

The components of the remuneration mix of executive directors are as follows:

**a) Fixed remuneration:** this seeks to attract and retain talent and reward the work of executive directors, based on their level of responsibility, dedication, track record and professional experience, such that the necessary professionals are available to achieve the objectives of the Iberdrola group. Pursuant to the current Policy, this component of remuneration shall be in line with the remuneration paid in the market by companies with comparable capitalisation, size, ownership structure and international scope.
b) Short-term variable remuneration (annual bonus): this seeks to incentivise the achievement of the group’s annual objectives and those that are specific to each position, aligning the dedication and efforts of the executive directors (and those of the members of the management team and the professionals of the group) with the business strategy. Annual variable remuneration shall be fully paid in cash.

(b.1) The objectives to which the short-term variable remuneration of the Executive Chairman shall be linked will be related to parameters like:

- Net profit, gross operating income (EBITDA), cash flow, etc.
- Investments.
- Evolution of shareholder remuneration in comparison with other values and indices.
- Financial strength.
- Development and application of the Stakeholder Engagement Policy and commitment to the social dividend.
- Development of the Equality, Diversity and Inclusion Policy.
- Results in the fight against climate change.
- Management of corporate reputation, measured in terms of presence in sustainability and ethics indices.
- Training of the group’s professionals.

Specifically, the following weightings were used for the parameters linked to short-term variable remuneration for financial year 2022:

• Economic/financial objectives: 500 out of 1,000 specific weight:
  - exceed the net profit for the preceding financial year (weight of 200 out of 1,000).
  - increase shareholder remuneration in line with growth in net profit (weight of 150 out of 1,000).
  - maintain financial strength in the FFO/Net Debt ratio at year-end 2021 (weight of 150 out of 1,000).

• Sustainable development objectives - 500 out of 1,000 specific weight:
- continuous increase in female presence in positions of responsibility (weight of 125 out of 1,000).

- presence on international indices (weight of 250 out of 1,000).

- exceed ratio of training hours received per employee over that of comparable companies. (weight of 125 out of 1,000).

(b.2) Taking into account the new CEO’s appointment on 25 October 2022, his objectives as Business CEO have been assessed, with his short-term variable remuneration linked to parameters such as:

• Economic/financial objectives - 425 out of 1,000 specific weight:
  - EBIT of the Businesses (Renewables, Networks and Retail) (weight of 285 out of 1,000).
  - NOE of the Businesses (Renewables, Networks and Retail) (weight of 140 out of 1,000).

• Growth objective - 425 out of 1,000 specific weight:
  - Increase in assets in service within RAB (weight of 125 out of 1,000).
  - Completion of construction projects 2022 (MW) (weight of 100 out of 1,000).
  - FID projects with profitability (weight of 100 out of 1,000).
  - Commercial EBIT Spain + UK (weight of 100 out of 1,000).

• ESG objectives - 150 out of 1,000 specific weight:
  - Promotions and horizontal / international mobility of talent (weight of 22.5 out of 1,000).
  - Increase in presence of women in important positions (weight of 22.5 out of 1,000).
  - Increase in presence of women in positions of responsibility (weight of 45 out of 1,000).
  - Cybersecurity (weight of 60 out of 1,000).

The parameters for financial year 2023 are as follows:

(b.3) For the Executive Chairman

• Economic/financial objectives: 500 out of 1,000 specific weight:
  - Net profit (weight of 200 out of 1,000).
- Increase shareholder remuneration in line with growth in net profit (weight of 150 out of 1,000).

- Financial soundness: FFO/Adjusted Net Debt (weight of 150 out of 1,000).

• Sustainable development objectives - 500 out of 1,000 specific weight:

  - Continuous increase in female presence in positions of responsibility (weight of 125 out of 1,000).

  - Presence on international indices (weight of 250 out of 1,000).

  - Cybersecurity (weight of 125 out of 1,000).

(b.4) For the Chief Executive Officer

• Economic/financial objectives: 600 out of 1,000 specific weight:

  - Net profit (weight of 400 out of 1,000).

  - Financial soundness: FFO/Adjusted Net Debt (weight of 200 out of 1,000).

• Growth objective - 300 out of 1,000 specific weight:

  - Potential renewable capacity (weight of 150 out of 1,000).

  - New Networks assets recognised as part of RAB (weight of 150 out of 1,000).

• ESG objectives - 100 out of 1,000 specific weight:

  - Occupational health and safety: internal personnel incident rate (weight of 100 out of 1,000).

c) Long-term variable remuneration (strategic bonus): this seeks to encourage the commitment of executive directors to the Iberdrola group’s long-term business enterprise by linking a portion of their remuneration to the creation of shareholder value, as well as to the sustainable achievement of the Company’s strategic objectives and the maximisation of its social dividend and of shareholder return. Multi-annual variable remuneration is linked to the Company’s performance and long-term interests and is implemented through share delivery plans linked to the achievement of long-term objectives, which typically have a term of six years (three for the evaluation of performance and three for payment thereof). The 2020-2022 Strategic Bonus is currently in force, which will be paid, if the objectives are achieved, in years 2023 to 2025 by means of a deferred delivery of shares over three years.

d) Benefits: The remuneration system of executive directors will be supplemented by health, life and accident insurance and other benefits in line with the practice followed in the market by companies with comparable capitalisation, size, ownership structure
and international scope. The Company may implement long-term pension schemes in favour of its executive directors.

The executive directors also have limited electricity allowances through rate concessions at their customary and permanent home or residence and at temporary homes.

**Scenarios of the remuneration mix**

The estimated remuneration mix based on the share price as at the date of approval of the corresponding strategic bonuses, assuming that around 85% of the corresponding parameters are ultimately met, would be approximately:

a) Executive Chairman

Minimum achievement scenario: 23% fixed remuneration, 26% annual variable remuneration and 51% multi-annual variable remuneration.

Target scenario: 22% fixed remuneration, 26% annual variable remuneration and 52% multi-annual variable remuneration.

Maximum achievement scenario: 21% fixed remuneration, 27% annual variable remuneration and 52% multi-annual variable remuneration.

b) Chief Executive Officer

Minimum achievement scenario: 38% fixed remuneration, 27% annual variable remuneration and 35% multi-annual variable remuneration.

Target scenario: 37% fixed remuneration, 27% annual variable remuneration and 36% multi-annual variable remuneration.

Maximum achievement scenario: 35% fixed remuneration, 28% annual variable remuneration and 37% multi-annual variable remuneration.

These estimates have been made taking into account a potential swing of +/-5 percentage points.

**Malus and clawback clauses**

The basic principles of the director remuneration policy include establishing adequate mechanisms so that the Company can obtain reimbursement of the variable remuneration
components in the event that payment was not in accordance with the performance conditions or when payment was made based on data subsequently shown to have been inaccurate.

In addition, all multi-annual variable remuneration is subject to malus and clawback clauses. In this regard, prior to accrual and payment, deferred variable remuneration requires a report from the Remuneration Committee confirming that the rationale supporting such deferred variable remuneration still applies. If there is a circumstance that subsequently requires a correction of the parameters taken into consideration during the initial evaluation, the Board of Directors will decide whether to cancel payment of the deferred variable remuneration in whole or in part (malus clause), and even to demand the total or partial return of amounts already paid (clawback). These circumstances include fraud, serious violation of the law, and a material restatement of the financial statements on which the Board of Directors based the evaluation of the performance level, provided that said restatement is confirmed by the external auditors and is not due to a change in accounting rules.

It should also be noted that during each of the three years of the period for accrual and payment of the strategic bonus and on occasion of each delivery of shares, it is provided that an assessment must be made of whether the corresponding payment should be confirmed or cancelled, in whole or in part, and also, if applicable, of whether the return of shares already delivered (or their amount in cash) should be demanded in certain cases.

**Measures adopted to reduce excessive exposure to risks**

As regards the different measures adopted by the Company to help reduce excessive exposure to certain risks and align it with the Company’s long-term objectives, values and interests, it should be noted that:

a) Remuneration Committee:

- Proposes to the Board of Directors the remuneration policies applicable to the directors and to the members of senior management, issuing the corresponding specific explanatory report required by Section 529 novodecies of the Companies Act (*Ley de Sociedades de Capital)*.

- Regularly revises the Remuneration Policy, proposing any applicable amendment and update thereof to the Board of Directors.

- Performs an appropriate assessment of the independence of the external adviser if the participation thereof is required for the preparation of the Director Remuneration Policy.

- Proposes to the Board of Directors the system and amount of the annual remuneration of directors, as well as the individual remuneration of executive directors and the other
basic terms and conditions of their contracts, including any potential compensation or severance payment that may be established in the event of removal.

– In connection with variable remuneration, it proposes to the Board the cancellation or reimbursement of any long-term variable remuneration that has been paid to the respective beneficiaries.

b) Audit and Risk Supervision Committee

– Pursuant to the Remuneration Policy, executive directors who are beneficiaries of incentive plans may not transfer ownership of the shares received for a period of 3 years unless they maintain a net financial exposure to changes in the share price having a market value equal to twice their annual fixed remuneration.

– Article 44 of the Regulations of the Board of Directors provides that the directors of Iberdrola must adopt the measures necessary to avoid entering into conflicts of interest pursuant to the provisions of law.

A.1.3 Amount and nature of fixed components that are due to be accrued during the year by directors in their capacity as such.

The remuneration to which directors are entitled in their capacity as such is structured in accordance with the following criteria within the framework of law and the By-Laws:

Directors receive a fixed annual amount in line with market standards, based on the positions they hold within the Board of Directors and the committees of which they are members.

The maximum amount of annual remuneration to be paid to the directors as a whole in their capacity as such (excluding any potential compensation for their non-compete commitment) is €9,000 thousand in each financial year in which this Policy is in effect. This overall amount may be updated by the Board of Directors based on the existing circumstances.

For financial year 2023, the Board of Directors, upon a proposal of the Remuneration Committee, has unanimously resolved to maintain the fixed remuneration. These amounts have been frozen since 2008.

Fixed remuneration of the directors for belonging to the Board of Directors and to the committees thereof based on the position held in each case is as follows:

– Director holding the position of Executive Chairman of the Board of Directors: €567 thousand.

– Director holding the position of Chief Executive Officer: €253 thousand.
- Directors holding the position of vice-chair or of chair of any of the consultative committees: €440 thousand.
- Directors holding the position of member of any of the committees: €253 thousand.
- Directors holding only the position of member of the Board of Directors: €165 thousand.

In addition, the fees received by the directors for attending meetings of the Board of Directors and of the committees thereof, based on the position held in each case, are as follows:

- Executive Chairman and vice-chairs of the Board of Directors: €6 thousand per meeting for attending the meetings of the Board of Directors.
- Chairs of the committees: €6 thousand per meeting for attending the meetings of the respective committee.
- Members of the Board of Directors and of the committees: thereof: €4 thousand.

A.1.4 Amount and nature of fixed components that are due to be accrued during the year for the performance of senior management functions of executive directors.

Between January and October 2022, the only executive director was Mr José Ignacio Sánchez Galán, who was therefore the only director receiving fixed remuneration for the performance of senior management duties.

After the interim appointment (co-option) of the new Chief Executive Officer, Mr Armando Martínez Martínez, on 25 October 2022, there are two directors who receive fixed remuneration for the performance of senior management duties.

At the meeting held by the Board of Directors on 21 February 2023, upon a proposal of the Remuneration Committee, it was resolved to maintain the fixed remuneration of the Executive Chairman for 2023 without change from 2022, in the amount of €2,250 thousand.

It should be noted that the fixed remuneration of the Executive Chairman has remained unchanged since 2008.

The fixed remuneration of the Chief Executive Officer will amount to €1,000 thousand. The following has been taken into account in order to establish the fixed remuneration of the Chief Executive Officer: the remuneration that the Chief Executive Officer was receiving in his previous senior management position at the Company, and the comparison with the various companies referred to in section A.1.1 of this Report.
A.1.5 Amount and nature of any component of remuneration in kind that will accrue during the year, including, but not limited to, insurance premiums paid in favour of the director.

The Company pays the premiums under insurance policies that it has taken with certain insurance companies for the coverage of the death or disability of directors caused by accidents, and the Company itself assumes coverage of benefits for the death or disability of directors due to natural causes. Other remuneration in kind is not significant and basically covers the electricity rate and health and casualty insurance. The estimated cost of all remuneration in kind will be similar to the cost reflected in section B.14 of this Report.

A.1.6 Amount and nature of variable components, differentiating between those established in the short and long terms. Financial and non-financial, including social, environmental and climate change parameters selected to determine variable remuneration for the current year, explaining the extent to which these parameters are related to performance, both of the director and of the company, and to its risk profile, and the methodology, necessary period and techniques envisaged to be able to determine the effective degree of compliance, at the end of the year, with the parameters used in the design of the variable remuneration, explaining the criteria and factors applied in regard to the time required and methods of verifying that the performance or any other conditions linked to the accrual and vesting of each component of variable remuneration have effectively been met.

Indicate the range, in monetary terms, of the different variable components according to the degree of fulfilment of the objectives and parameters established, and whether any maximum monetary amounts exist in absolute terms.

The only directors that receive variable remuneration are the executive directors, i.e. the Executive Chairman and the Chief Executive Officer.

Components of variable remuneration:

Annual variable remuneration

a) Executive Chairman

The variable remuneration parameters for the Executive Chairman are in line with the Outlook 2020-2025 presented at the Capital Markets Day held on 9 November 2022:

- Economic/financial objectives - 500 out of 1,000 specific weight
  
  - Exceed the net profit for the preceding financial year (weight of 200 out of 1,000).
Net profit for the financial year 2022 amounted to €4,339 million, 111.6% of the target. The achievement level is evaluated at 100% due to this figure being above 105% in a highly complex environment.

- Increase shareholder remuneration in line with growth in net profit (weight of 150 out of 1,000).

Shareholder remuneration amounted to €0.444 per share, an increase in line with net profit. The dividend has grown by 36.2% since 2018, which entails average annual growth of 8%. Pay-out amounted to 73.6%, within the upper end of the established range. Taking into account the foregoing, the achievement level is evaluated at 100%.

- Maintain financial strength in the FFO/Net Debt ratio at year-end 2021 (weight of 150 out of 1,000).

In terms of financial strength, the year-end FFO/net debt ratio was 24.9%, one percentage point higher than the previous year, and in any case above the target. As the ratio has been improved and the credit rating levels maintained, the achievement level is evaluated at 100%.

- Sustainable development objectives (500 out of 1,000 specific weight)

- Continuous increase in female presence in positions of responsibility (weight of 125 out of 1,000).

Female presence in positions of responsibility grew from 33.7% in 2021 to 34.0% in 2022, in addition to a notable percentage of women in senior management (30%) and an improvement in the percentage of women in important positions to 26.1%, as against 24.4% in the previous financial year. In view of the increase in positions of responsibility of 0.3 percentage points, the achievement level is evaluated at 100%.

- Presence on international indices (weight of 250 out of 1,000).

Iberdrola maintains its presence on the world’s leading sustainability indices (DJSI, FTSE4Good, 2022 World’s Most Ethical Companies). In addition, Iberdrola remains included on numerous sustainable company indices: Global 100, CDP Climate Change, ISS ESG (Prime), MSCI Global Sustainability Index (AAA), Bloomberg Gender Equality Index, etc. As it has maintained the same ratings as in previous financial years on more than 6 benchmark indices, the achievement level is evaluated at 100%.

- Exceed ratio of training hours received per employee over that of comparable companies (weight of 125 out of 1,000).

The number of training hours provided in 2022 amounts to 67.9 hours/employee, far higher than comparable companies according to FUNDAE (State Foundation for Employment Training), far exceeding full compliance with the objective. As the number of hours has exceeded 55 per annum, the achievement level is evaluated at 100%.
Taking into account the foregoing, the total weighted achievement level is 100% for the parameters to which the Executive Chairman’s annual variable remuneration for financial year 2022 is linked.

The Remuneration Committee may also consider other parameters for the evaluation of the Executive Chairman.

b) Chief Executive Officer
In the case of the Chief Executive Officer, the parameters to which his annual variable remuneration is linked are as follows:

- **Economic/financial objectives - 425 out of 1,000 specific weight:**
  - EBIT of the Businesses (Renewables, Networks and Retail) (weight of 285 out of 1,000). This objective will be deemed fully achieved (100%) if the result exceeds the budget by at least 2%.
    
    EBIT of the Businesses for financial year 2022 amounted to €7,653 million, exceeding the target. The achievement level is evaluated at 100% due to this figure exceeding the target in a highly complex environment.
  
    - NOE of the Businesses (Renewables, Networks and Retail) (weight of 140 out of 1,000). This objective will be deemed fully achieved (100%) if the result is at least 3% lower than budgeted.
    
    NOE of the Businesses for financial year 2022 amounted to €4,729 million, exceeding the target by 3.80 percentage points. The achievement level is evaluated at 100% due to this figure exceeding the target.

- **Growth objective - 425 out of 1,000 specific weight:**
  - Increase in assets in service within RAB (weight of 125 out of 1,000). This objective will be deemed fully achieved (100%) if the result exceeds the value at year-end 2021 by at least 3.8%.
    
    The new networks assets recognised as part of RAB increased by 9% compared to year-end 2021. The achievement level is evaluated at 100%.
  
    - Completion of construction projects 2022 (MW) (weight of 100 out of 1,000). This objective will be deemed fully achieved (100%) if the result is equal to or exceeds budget.
    
    The plan has not been fulfilled, owing to factors including the circumstances involving the prioritisation of projects that were already under construction.
  
    - FID projects with profitability (weight of 100 out of 1,000). This objective will be deemed fully achieved (100%) if the result is equal to or exceeds budget.
The plan has not been fulfilled, owing to factors including the slowdown in installation of capacity due to the prevailing circumstances.

- Commercial EBIT Spain + UK (weight of 100 out of 1,000). This objective will be deemed fully achieved (100%) if the result exceeds budget by 1%.

  Commercial EBIT for Spain and the UK amounted to €667 million, exceeding the target. The achievement level is evaluated at 100% due to this figure exceeding the target in a highly complex environment.

- ESG objectives - 150 out of 1,000 specific weight:

  - Promotions and horizontal / international mobility of talent (weight of 22.5 out of 1,000). This objective will be deemed fully achieved (100%) if the number of cases exceeds 130.

    During financial year 2022, there have been 133 promotions and movements involving international mobility of talent. The achievement level is evaluated at 100%

  - Increase in presence of women in important positions (weight of 22.5 out of 1,000). This objective will be deemed fully achieved (100%) if the result exceeds the value for 2021 by one percentage point.

    Female presence in important positions of responsibility grew to 26.1% from 24.4% in the previous financial year, in addition to a notable percentage of women in senior management (30%). The achievement level is evaluated at 100%

  - Increase in presence of women in positions of responsibility (weight of 45 out of 1,000). This objective will be deemed fully achieved (100%) if the result exceeds the value for financial year 2021.

    The presence of women in positions of responsibility grew from 33.7% in 2021 to 34.0% in 2022. In view of the increase in positions of responsibility of 0.3 percentage points, the achievement level is evaluated at 100%.

  - Cybersecurity (weight of 60 out of 1,000). This objective will be deemed fully achieved (100%) if all planned milestones are achieved.

    Practically the entire cybersecurity plan for financial year 2022 has been achieved, both for the businesses and for the company. The achievement level is evaluated at 98.13%.

Taking into account the foregoing, the total weighted achievement level is 87.96% for the parameters to which the Chief Executive Officer’s annual variable remuneration for financial year 2022 is linked.

The Remuneration Committee may also consider other parameters for the evaluation of the Chief Executive Officer.
For 2023, the Board of Directors has resolved to maintain the maximum limit on the annual variable remuneration of the Executive Chairman at the same level as in 2022 (€3,250 thousand).

In the case of the Chief Executive Officer, the maximum limit on variable remuneration has been established at €1,500 thousand.

Payment of the annual variable remuneration is made once the annual financial statements have been prepared by the Board of Directors and subsequently audited. The Board of Directors shall also consider the overall economic/financial and operational performance of the Company in evaluating the performance of the executive directors.

**Multi-annual variable remuneration**

At the General Shareholders’ Meeting held on 2 April 2020 the shareholders approved the 2020-2022 Strategic Bonus as a long-term incentive linked to the Company’s performance in relation to certain parameters, to be paid through the delivery of shares, in accordance with the following guidelines:

- **Beneficiaries**: up to a maximum of 300, including executive directors.

- **Parameters**:
  - substantial increase in net profit (30% weight);
  - comparative increase in total shareholder return (20% weight);
  - improvement in financial strength (20% weight); and
  - parameters related to the Sustainable Development Goals (average intensity of CO₂ emissions, suppliers subject to sustainable development policies and standards, and salary gap between women and men) (20% weight).

- **Maximum number of shares to be delivered**: up to 14,000,000, equal to 0.22% of the share capital at the time of approval of the resolution.

- **Maximum number of shares to be delivered to the group of executive directors**: up to 2,500,000 shares; up to a maximum of 1,900,000 shares in the case of the Executive Chairman and up to a maximum of 240,000 shares in the case of the Chief Executive Officer, which was assigned to him in 2020 when he was a member of senior
management and has not been changed as a result of his appointment as Chief Executive Officer.

- Duration: evaluation period 2020-2022 and payment period 2023-2025, in three equal instalments each year.

- Annual verification by the Remuneration Committee, prior to each of the payments, that the circumstances leading to the accrual thereof remain in effect. The first payment will be made after the annual financial statements have been prepared by the Board of Directors, audited, and approved by the shareholders at the General Shareholders’ Meeting. In any event, the Remuneration Committee shall have the assistance of an independent expert in the evaluation of performance in relation to the aforementioned benchmark parameters.

- Possible cancellation of pending payments and reimbursement of the shares delivered (malus clause and claw-back).

The first delivery under the 2020-2022 strategic bonus will be made during 2023.

A.1.7 Main characteristics of long-term savings schemes. Among other information, indicate the contingencies covered by the scheme, whether it is a defined contribution or a defined benefit scheme, the annual contribution that has to be made to defined contribution schemes, the benefits to which directors are entitled in the case of defined benefit schemes, the vesting conditions of the economic rights of directors and their compatibility with any other type of payment or indemnification for early termination or dismissal, or deriving from the termination of the contractual relationship, in the terms provided, between the company and the director.

Indicate whether the accrual or vesting of any of the long-term savings plans is linked to the attainment of certain objectives or parameters relating to the director’s short- or long-term performance.

The Company has no commitment to any long-term defined-contribution, defined-benefit retirement or savings system for any director.

A.1.8 Any type of payment or indemnification for early termination or dismissal, or deriving from the termination of the contractual relationship, on the terms provided, between the company and the director, whether at the company’s or the director’s initiative, as well as any type of agreement reached, such as exclusivity, post-contractual non-competition, minimum contract term or loyalty, that entitles the director to any kind of remuneration.
No non-executive director shall receive any compensation for termination or early cessation of office or due to termination of the contractual relationship. However, non-executive directors, with the exception of proprietary directors, must abide by the commitment not to compete, which consists of the following:

Commitment not to compete:

A director who ends the term of office to which the director was appointed or who, for any other reason, ceases to act as such, may not be a director or officer of, or provide services to, any entity whose object is similar, in whole or in part, to that of the Company or which is a competitor of the Company, for a term of two years. The Board of Directors may, if it deems it appropriate, relieve the outgoing director from this obligation or shorten the period thereof.

In the event of cessation of office prior to the end of the term for which they were appointed, non-executive directors who are not proprietary directors shall be entitled to receive compensation for the commitment not to compete described in the preceding paragraph, unless their cessation is due to a breach of the duties of director attributable thereto or to the provisions of the succession plan included in the General Corporate Governance Policy, or to the sole decision thereof.

For purposes of clarification, cessation of office shall not be considered to be due exclusively to the decision of the director if resignation occurs on occasion of the acceptance of a public office that is incompatible with the holding of the position of director. The compensation for the commitment not to compete, if applicable, shall be equal to 90% of the fixed amount that the director would have received for the remainder of the director’s term (assuming that the annual fixed amount that the director receives at the time of cessation of office is maintained), with a maximum equal to two times 90% of such annual fixed amount.

A.1.9 Indicate the conditions that the contracts of executive directors performing senior management functions should contain. Among other things, information must be provided on the duration, limits on amounts of indemnification, minimum contract term clauses, notice periods and payment in lieu of these notice periods, and any other clauses relating to signing bonuses, as well as compensation or golden parachute clauses for early termination of the contractual relationship between the company and the executive director. Include, among others, the pacts or agreement on non-competition, exclusivity, minimum contract terms and loyalty, and post-contractual non-competition, unless these have been explained in the previous section.

Payments for termination of the contract between the Company and the executive directors are comprised of severance pay and an agreement not to compete, as explained below:
Severance pay:

Since the end of the 90s, executive directors, as well as a group of members of the management team, are entitled to receive severance pay in the event of termination of their executive relationship with the Company, provided that said termination is not due to a breach attributable to the beneficiary or solely due to a voluntary decision thereof. For purposes of clarification, termination shall not be deemed to be solely due to a voluntary decision of the executive director if the director’s resignation is due to a breach by the Company or a substantial modification of the director’s duties or other similar circumstances.

A) Contract with the Executive Chairman

When the current Executive Chairman joined the Company in 2001, the Company included clauses in the contracts with its key officers providing for severance pay of up to five times annual salary in order to achieve an effective and sufficient level of loyalty. Although the treatment in effect for such officers was applied to him at that time, he would now be entitled to three times annual salary as severance pay.

The Board of Directors has analysed this situation and has found that, taking into account the average age of the affected group and the low likelihood of the guarantees being enforced, the amount of the contingency would gradually decrease over time, resulting in payments far smaller than any alternative consisting of a reduction in the agreed severance payments. Furthermore, the contract with the Executive Chairman in any event establishes a duty not to compete with respect to companies and activities that are similar in nature to those of the Company during the term of his relationship with the Company and for a period of two years. In compensation for this commitment, he is entitled to a severance payment equal to two times annual salary.

Other basic conditions of contracts with executive directors are:

(i) indefinite duration;

(ii) strict compliance with the rules and provisions of the Company's Governance and Sustainability System;

(iii) confidentiality and commitment to return documents in the event of termination of the contractual relationship;

(iv) general advance notice period of three months before termination.

B) Contract with new executive directors:

Since 2011, contracts with new executive directors and with the members of senior management have included maximum severance pay equal to two times annual salary in the event of
termination of their relationship with the Company, provided that termination of the relationship is not the result of a breach attributable thereto or solely due to a voluntary decision thereof. For purposes of clarification, termination shall not be deemed to be solely due to a voluntary decision of the executive director if the director’s resignation is due to a breach by the Company or a substantial modification of the director’s duties or other similar circumstances.

Commitment not to compete:

As executive directors are closely acquainted with the design and implementation of the business strategy and plans of the Company, the contracts with them provide for the duty not to compete in relation to companies and activities of a similar nature during the term of their relationship with the Company as well as for a subsequent period of one to two years.

In compensation for this post-contractual commitment not to compete, executive directors are entitled to compensation equal to the fixed remuneration corresponding to such period.

In the case of the Chief Executive Officer, the termination conditions agreed in his contract are set out in this section B), including compensation for the post-contractual commitment not to compete as part of any contractual severance payment.

A.1.10 The nature and estimated amount of any other supplementary remuneration that will be accrued by directors in the current year in consideration for services rendered other than those inherent in their position.

There is no supplementary remuneration.

A.1.11 Other items of remuneration such as any deriving from the company’s granting the director advances, loans or guarantees or any other remuneration.

The Director Remuneration Policy does not contemplate the granting of advances, loans or guarantees by the Company.

A.1.12 The nature and estimated amount of any other planned supplementary remuneration to be accrued by directors in the current year that is not included in the foregoing sections, whether paid by the company or by another group company.

The Director Remuneration Policy approved by the shareholders at the General Shareholders’ Meeting held on 18 June 2021 provides that executive directors and officers of the group who hold the position of director at companies that are not wholly owned either directly or indirectly by Iberdrola may receive remuneration corresponding to the position from said companies in accordance with their corporate governance rules on the same terms as the other directors.

Along these lines, it is estimated that during 2023 the Executive Chairman of Iberdrola will
receive an amount similar to the amount set forth in section C of this Report for his positions as chairman of the boards of directors of Neoenergia, S.A. and Avangrid, Inc.

A.2 Explain any significant change in the remuneration policy applicable in the current year resulting from:

- A new policy or an amendment to a policy already approved by the General Meeting.
- Significant changes in the specific determinations established by the board for the current year regarding the remuneration policy in force with respect to those applied in the previous year.
- Proposals that the Board of Directors has agreed to submit to the general shareholders’ meeting to which this annual report will be submitted and for which it is proposed that they be applicable to the current year.

The Director Remuneration Policy approved by the shareholders at the General Shareholders’ Meeting held on 18 June 2021 has been in force since the financial year of its approval and will be in force during financial years 2022, 2023 and 2024. The text thereof conformed to the amendments made by Section 529 novodecies of the Companies Act, which amendments came into force after the approval of this Policy by the shareholders at the General Shareholders’ Meeting, and included a number of technical improvements while retaining the general guidelines of the previous policy.

**Technical improvements included in the current Policy**

a) **The group’s strategy**: establishment of objective standards relating to the Iberdrola group’s strategy for purposes of the remuneration of executive directors.

b) **New parameters applicable to the variable remuneration** of executive directors: inclusion of environmental and long-term sustainability parameters, including those relating to the energy transition, the mitigation of and adaptation to climate change, and others relating to the Sustainable Development Goals (SDGs) approved by the United Nations, along with the financial and operational/industrial parameters already established in the previous policy.

c) **Labour conditions at the Iberdrola group**: in revising and updating the current policy, the Remuneration Committee has taken into account the employment conditions and remuneration levels of the Iberdrola group’s professionals, especially in connection with the remuneration of executive directors.

d) **Maximum annual amount**: by revising the maximum amount of annual remuneration to be paid to the directors as a whole in their capacity as such, which may be updated by the Board
of Directors within the maximum annual limit established in the policy, which will be disclosed in the annual director remuneration report.

e) **Commitment not to compete**: by updating the terms of the commitment not to compete without altering the term thereof or the calculation of any applicable compensation.

f) **Further information regarding the structure of remuneration of executive directors**: by including a higher level of detail regarding fixed remuneration, variable remuneration (short-term (annual bonus) and long-term (strategic bonus)) of executive directors.

g) **New directors**: by providing for the establishment of special and extraordinary remuneration and incentives in order to attract talent and compensate the new executive directors for variable remuneration or contractual rights lost upon leaving their previous position.

h) **Temporary exceptions**: by providing for the ability of the Board of Directors, after a favourable report from the Remuneration Committee, to apply temporary exceptions to the variable components of the remuneration of executive directors when required to safeguard the long-term interests and sustainability of the Company as a whole or to ensure the viability thereof pursuant to the provisions of the new Section 529 novodecies.6. of the Companies Act.

A.3 Identify the direct link to the document containing the company's current remuneration policy, which must be available on the company's website.

A.4 Explain, taking into account the data provided in Section B.4, how account has been taken of the voting of shareholders at the General Shareholders’ Meeting to which the annual report on remuneration for the previous year was submitted on a consultative basis.

The consultative vote on the Annual Director Remuneration Report for financial year 2021 yielded 23.96% votes against and 1.46% abstentions at the 2022 General Shareholders' Meeting. In view of these results, the Committee undertook a number of initiatives in order to better understand the reasons why a portion of the shareholders did not vote in favour of the Annual Director Remuneration Report for financial year 2021 and to develop a specific action plan to improve interaction and report on decision-making. Such measures include the following:

- Interaction with investors in order to fully understand their concerns and provide them with more information and context regarding the decisions adopted by the Board of
Directors. In this regard, the Investor Relations, ESG and General Secretary’s areas and the Board met with 4 proxy advisors and 30 institutional investors who hold an aggregate of 33.4% of Iberdrola’s share capital in May and June.

– GAP analysis of remuneration in order to identify the main areas for improvement in remuneration matters and bring it closer to the best international standards (detailed information in this regard is provided in section B.1. of this report)

– Design of an action plan with specific activities, commitments and future requirements in terms of disclosure of information.

– Implementation of improvements in the disclosure of information in the Annual Director Remuneration Report for financial year 2022.
B. OVERALL SUMMARY OF HOW REMUNERATION POLICY WAS APPLIED DURING THE YEAR LAST ENDED

B.1.1 Explain the process followed to apply the remuneration policy and determine the individual remuneration contained in Section C of this report. This information will include the role played by the remuneration committee, the decisions taken by the Board of Directors and the identity and role of any external advisors whose services may have been used in the process of applying the remuneration policy in the year last ended.

Pursuant to Iberdrola’s Governance and Sustainability System, the Board of Directors, upon a proposal of the Remuneration Committee, is the body with power to set the remuneration of directors, except the remuneration consisting of the delivery of shares of the Company or of options thereon or which is indexed to the price of the shares of Iberdrola, which must be approved by the shareholders acting at a General Shareholders’ Meeting.

At 31 December 2022 and as of the date of preparation of this Report, Iberdrola’s Remuneration Committee is made up of three members, 67% of whom are independent directors (2) and 33% of whom are other external directors (1).

- Mr Juan Manuel González Serna (chair, independent)
- Mr Iñigo Víctor de Oriol Ibarra (member, other external)
- Mr Manuel Moreu Munaiz (member, independent)
- Mr Rafael Mateu de Ros Cerezo (secretary, non-member)

The profile of the members of this Committee is available through the following link: https://www.iberdrola.com/corporate-governance/board-directors/remuneration-committee

The Committee met on 10 occasions during 2022 and devoted special attention to the continuous improvement of the Annual Director Remuneration Report, the acknowledgement of the designation of new beneficiaries of the 2020-2022 Strategic Bonus following the appointment of the Chief Executive Officer and the review of trends in remuneration parameters, such as the inclusion of indicators aligned with the objectives of the ESG strategy.

There was a particular focus on key aspects such as the remuneration of directors and senior management, and other activities related to the adequacy of information on remuneration.

In compliance with the good practices and recommendations established in “Technical Guide 1/2019 on Nomination and Remuneration Committees”, the Remuneration Committee has received support from independent external advisers. In this regard, in all of its decision-making processes, this Committee has received information and advice from the internal services of the
Company and from expert external consultants in this area, taking into consideration the most demanding remuneration recommendations and policies at the international level. In particular, the advice of “PricewaterhouseCoopers Asesores de Negocios, S.L.” (“PwC Asesores”) was relied upon to evaluate the performance of the executive directors during financial year 2022 and to evaluate the parameters for the 2020-2022 Strategic Bonus, and the firm Georgeson provided advice to perform a Gap Analysis in the area of remuneration as well as to prepare the text of this Annual Remuneration Report 2022. The purpose of this Gap Analysis was to identify positive aspects and areas for improvement, designing an action plan for the short and long term. To this end, Georgeson carried out the following activities:

- Analysis of the main reasons for the votes against cast by Iberdrola’s institutional investors in the consultative vote on the Annual Director Remuneration Report for 2021.

- Analysis of the main concerns expressed by the benchmark proxy advisors in connection with the Annual Director Remuneration Report and, if applicable, the Remuneration Policy of Iberdrola.

- Analysis of voting policies in remuneration matters among Iberdrola’s Top 20 foreign institutional investors.

- Analysis of remuneration practices (remuneration policies and reports) of 5 international and domestic peers.

Moreover, in February 2022 the Remuneration Committee received an internal benchmark analysis regarding the total remuneration of executive directors. This analysis used the following criteria to select the comparison group:

1. Utilities (5 selected companies):
   - Companies listed on the S&P 500 Utilities and Stoxx Europe 600 indices.
   - Companies belonging to the European Round Table of Industrialists (ERT) and Business Round Table (BRT) forums.
   - Turnover in the last financial year of a minimum of approximately 50% of Iberdrola’s turnover, provided that the market capitalisation exceeds €10,000 million.
   - Companies in which the government has a management or ownership stake were eliminated.

2. Conglomerate sample (31 selected companies):
   - Companies listed on the FTSE Eurotop 100 and S&P 500 indices.
• Companies belonging to the European Round Table of Industrialists (ERT) and Business Round Table (BRT) forums.

• Turnover in the last financial year and market capitalisation, between approximately 50% and 200% of Iberdrola’s size.

• International presence and geographic diversity comparable to those of Iberdrola.

• Financial services and insurance companies excluded.

3. Top IBEX 35 companies by capitalisation (3 selected companies).

4. European companies positioned to tackle the energy transition (6 selected companies).

The list of companies is as follows:

Utilities: DUKE ENERGY CORP, E.ON SE, EXELON CORP, NEXTERA ENERGY, SOUTHERN CO

Conglomerates: 3M CO, ABB LTD-REG, AIR LIQUIDE SA, AIRBUS SE, AMERICAN EXPRESS, ARCHER-DANIELS, BOEING CO/THE, BRISTOL-MYER SQB, CATERPILLAR INC, DEERE & CO, DOW INC, FREEPORT-MCMORAN, GENERAL DYNAMICS, GLAXOSMITHKLINE, HEINEKEN NV, HONEYWELL INTL, HP INC, HUMANA INC, IBM, JOHNSON CONTROLS, LOCKHEED MARTIN, MEDTRONIC PLC, MICRON TECH, NORTHROP GRUMMAN, RAYTHEON TECHNOL, RIO TINTO PLC, SIEMENS AG-REG, STARBUCKS CORP, SYSCO CORP, VODAFONE GROUP, VOLVO AB-A

Ibex-35: BANCO SANTANDER, BBVA, INDITEX

European energy transition companies: BP PLC, ENI SPA, EQUINOR ASA, REPSOL SA, ROYAL DUTCH SHELL, TOTALENERGIES SE

In accordance with the results of the aforementioned study, IBERDROLA’s positioning was in the decile of the median of the comparable group both in the dimensions considered in the criteria “capitalisation” and “turnover” and in “total remuneration”.

B.1.2 Explain any deviation from the procedure established for the application of the remuneration policy that has occurred during the year.

There were no deviations from the established procedure during financial year 2022.
B.1.3 Indicate whether any temporary exception has been applied to the remuneration policy and, if so, explain the exceptional circumstances that have led to the application of these exceptions, the specific components of the remuneration policy affected and the reasons why the entity believes that these exceptions have been necessary to serve the long-term interests and sustainability of the society as a whole or ensure its viability. Similarly, quantify the impact that the application of these exceptions has had on the remuneration of each director over the year.

No temporary exception was applied in financial year 2022.

B.2 Explain the different actions taken by the company in relation to the remuneration system and how they have contributed to reducing exposure to excessive risks, aligning it with the long-term objectives, values and interests of the company, including a reference to the measures adopted to ensure that the long-term results of the company have been taken into consideration in the remuneration accrued. Ensure that an appropriate balance has been attained between the fixed and variable components of the remuneration, the measures adopted in relation to those categories of personnel whose professional activities have a material effect on the company's risk profile and the measures in place to avoid any possible conflicts of interest.

As already explained in section A.1.2 of this Report, multi-annual variable remuneration has a high specific weight in the overall remuneration of executive directors, and its main purpose is to align with the interests of shareholders, taking into account the long-term interests and results of the Company.

In this regard, the period for evaluating the performance of the long-term remuneration plans is extended to three years. In addition, the payment of this remuneration is implemented through the delivery of shares over the next three years. And each deferred delivery of shares is subject to prior confirmation by the Remuneration Committee of the validity of the grounds for the evaluation in order to assess whether it is appropriate to totally or partially cancel the corresponding payment and, if applicable, to claim the total or partial reimbursement of the shares already delivered.

As regards the balance between fixed and variable components of remuneration, see the explanation of the remuneration mix in section A.1.2 of this Report.

B.3 Explain how the remuneration accrued and consolidated over the financial the year complies with the provisions of the current remuneration policy and, in particular, how it contributes to the company’s long-term and sustainable performance.

Furthermore, report on the relationship between the remuneration obtained by the directors and the results or other performance measures of the company in the short and long term, explaining, if applicable, how variations in the company's performance
have influenced changes in directors’ remuneration, including any accrued remuneration payment of which has been deferred, and how such remuneration contributes to the short- and long-term results of the company.

The remuneration accrued in financial year 2022 fully conforms to the current Director Remuneration Policy. In this regard:

(i) The overall limit established in Article 48.1 of the By-Laws is not exceeded, pursuant to which the amount that the Company annually allocates as director remuneration is limited to a maximum amount equal to 2% of the profits obtained by the consolidated group during the financial year, once the legal and other mandatory reserves have been covered and if there has been an issuance to the shareholders of a dividend of at least 4% of the share capital.

(ii) It has been set and approved by the competent bodies in compliance with the established procedure; in this regard, the Remuneration Committee, pursuant to the provisions of Article 3 of the Regulations thereof, proposes to the Board of Directors the remuneration policies applicable to the directors and to the members of senior management and regularly revises them, proposing, if applicable, the amendment and update thereof to the Board of Directors. The Remuneration Committee submits the proposed Director Remuneration Policy to the Board of Directors for approval and subsequent submission to the shareholders at the General Shareholders’ Meeting, issuing the corresponding specific explanatory report required by Section 529 novodecies of the Companies Act.

(iii) It abides by the principles and structure of remuneration provided for in the Director Remuneration Policy, which have been described in sections A.1.1 and A.1.2 of this report.

(iv) The annual fixed remuneration to be paid to the directors does not exceed the limits established in said Policy.

The remuneration packages of the Executive Chairman and of the Chief Executive Officer have the following characteristics, which ensure their consistency with the strategy, interests and sustainability of the Company in the long term:

– Total remuneration is made up of the following main components: (i) Base Salary, (ii) Annual Bonus and (iii) Strategic Bonus (Long-Term Incentive). This long-term component will generally account for not less than 50% of the total in the case of the Executive Chairman and 35% in the case of the Chief Executive Officer, in a scenario of achievement of objectives.

– The annual bonus of the Executive Chairman and of the Chief Executive Officer is linked to a combination of specific objectives aligned with the interests of the stakeholders and
Iberdrola’s strategy. In the case of the Executive Chairman, his objectives for 2022 include 3 metrics relating to sustainability, with a weight of 50%. In the case of the Chief Executive Officer, 4 metrics are included, with a weight of 15%. These metrics are quantitative and auditable and are in turn related to Iberdrola’s Strategic Sustainability Plan.

- The long-term remuneration of the Executive Chairman and of the Chief Executive Officer includes a metric related to reduction of the average intensity of CO2 emissions, in line with SDGs 7 (affordable and clean energy) and 13 (climate action). This metric concerns increasing the number of suppliers subject to sustainable development policies and standards, such as the following: (a) a human rights strategy; (b) a code of conduct for their own suppliers; (c) health and safety standards (SDG 3 (good health and well-being)); and (d) a global environmental sustainability strategy, including strategies for water (SDG 6 (clean water and sanitation)), energy (SDG 7 (affordable and clean energy)) and biodiversity (SDGs 14 (life below water) and 15 (life on land)). There is also a metric concerning closing the gender pay gap at the Iberdrola group level, in line with SDG 5 (gender equality).

- The shares delivered to the Executive Chairman and to the Chief Executive Officer are subject to a 3-year retention period.

Appropriate balance between fixed and variable remuneration components:

- The Executive Chairman and the Chief Executive Officer have a variable remuneration system that includes a minimum threshold below which no incentive is paid. The percentage of short- and long-term variable remuneration may be significant if the objectives are achieved at their maximum level. In any event, said percentage as related to total remuneration (understood to consist of Base Salary, the Annual Bonus and the annualised Strategic Bonus) cannot exceed 80% in the case of the Executive Chairman and 75% in the case of the Chief Executive Officer (in exceptional circumstances, these percentages might be higher, pursuant to the provisions of the Remuneration Policy).

- Sustainability is a basic pillar of the Company’s strategy.

A summary of other aspects of the Company’s performance in 2022 is provided below:

- EBITDA grew by 10% to over €13,200 million.

- 9,700 MW under construction or assured, of which 5,500 MW are offshore.

- The remuneration basis of regulated assets has grown by €6,300 million to €39,300 million.

- Critical supplies are already secured for growth investments under the 2023-2025 plan: 100% of offshore investments under the 2023-2025 plan, 100% of photovoltaic installation
investments for 2023 and approximately 70% of network investments under the 2023-2025 plan.

B.4 Report on the result of the consultative vote at the General Shareholders’ Meeting on remuneration in the previous year, indicating the number of votes in favour, votes against, abstentions and blank ballots:

B.5 Explain how the fixed components accrued and vested during the year by the directors in their capacity as such were determined, their relative proportion with regard to each director and how they changed with respect to the previous year.

The remuneration of the directors in their capacity as such is determined in the Director Remuneration Policy approved by the shareholders at the General Shareholders’ Meeting held on 18 June 2021. It has remained unchanged since 2008. Outside directors do not receive variable remuneration.

B.6 Explain how the salaries accrued and vested by each of the executive directors over the past financial year for the performance of management duties were determined, and how they changed with respect to the previous year.

Salaries accrued during 2022 by the Executive Chairman and the Chief Executive Officer are determined in accordance with the Director Remuneration Policy approved by the shareholders at the General Shareholders’ Meeting held on 18 June 2021.

The Remuneration Committee proposed to the Board of Directors that the fixed remuneration of the Executive Chairman for financial year 2022 be set at €2,250 thousand, which proposal was approved by the Board of Directors. This amount does not represent an increase compared to the previous financial year. This proposal was made based on the historical results achieved once more by the Company during financial year 2021, when it posted an increase of 8% in consolidated profits compared to 2020.
In the case of the Chief Executive Officer, the Remuneration Committee proposed to the Board of Directors that a fixed remuneration of €1,000 thousand be set for financial year 2022, during the period of that financial year that he performed his duties as Chief Executive Officer.

B.7 Explain the nature and the main characteristics of the variable components of the remuneration systems accrued and vested in the year last ended.

In particular:

- Identify each of the remuneration plans that determined the different types of variable remuneration accrued by each of the directors in the year last ended, including information on their scope, date of approval, date of implementation, any vesting conditions that apply, periods of accrual and validity, criteria used to evaluate performance and how this affected the establishment of the variable amount accrued, as well as the measurement criteria used and the time needed to be able to adequately measure all the conditions and criteria stipulated, explaining the criteria and factors applied in regard to the time required and the methods of verifying that the performance or any other kind of conditions linked to the accrual and vesting of each component of variable remuneration have effectively been met.

- In the case of share options and other financial instruments, the general characteristics of each plan must include information on the conditions both for acquiring unconditional ownership (vesting) of these options or financial instruments and for exercising them, including the exercise price and period.

- Each director that is a beneficiary of remunerations systems or plans that include variable remuneration, and his or her category (executive director, external proprietary director, external independent director or other external director).

- Information is to be provided on any periods for accrual, vesting or deferment of payment of vested amounts applied and/or the periods for retention/unavailability of shares or other financial instruments, if any.

Pursuant to the Remuneration Policy, the only directors who are entitled to variable remuneration are the executive directors, and therefore, it only applies to the Executive Chairman and to the new Chief Executive Officer. Said remuneration consists of an annual variable component and a long-term variable component.

Executive Chairman

a) **Annual variable remuneration**: This incentivises and rewards performance in connection with a number of financial, non-financial and individual annual objectives, which are
consistent with the company’s strategy. It is paid in cash and is linked to the results for the previous financial year. The parameters were as follows:

- **Economic/financial objectives (weight of 500 out of 1,000)**
  - Exceed the net profit for the preceding financial year (weight of 200 out of 1,000).

  Net profit for financial year 2022 amounted to €4,339 million, 11.7% higher than the established target of €4,200 million. The achievement level is evaluated at 100%.

  - Increase shareholder remuneration in line with growth in net profit (weight of 150 out of 1,000).

  Shareholder remuneration amounted to €0.444 per share, an increase in line with net profit. The dividend has grown by 36.2% since 2018, which entails average annual growth of 8%. Pay-out amounted to 73.6%, within the upper end of the established range. Taking into account the foregoing, the achievement level is evaluated at 100%.

  - Maintain financial strength in the FFO/Net Debt ratio at year-end 2021 (weight of 150 out of 1,000).

  In terms of financial strength, the year-end FFO/net debt ratio was 24.9%, one percentage point higher than the previous year, and in any case above the target. As the ratio has been improved and the credit rating levels maintained, the achievement level is evaluated at 100%.

- **Sustainable development goals (50% weight)**
  - Continuous increase in female presence in positions of responsibility (weight of 125 out of 1,000)

  Female presence in positions of responsibility grew from 33.7% in 2021 to 34.0% in 2022, in addition to a notable percentage of women in senior management (30%) and an improvement in the percentage of women in important positions to 26.1%, as against 24.4% in the previous financial year. In view of the increase in positions of responsibility of 0.3 percentage points, the achievement level is evaluated at 100%.

  - Presence on international indices (weight of 250 out of 1,000).

  Iberdrola maintains its presence on the world’s leading sustainability indices (DJSI, FTSE4Good, 2022 World’s Most Ethical Companies). In addition, Iberdrola remains
included on numerous sustainable company indices: Global 100, CDP Climate Change, ISS ESG (Prime), MSCI Global Sustainability Index (AAA), Bloomberg Gender Equality Index, etc. As it has maintained the same ratings as in previous financial years on more than 6 benchmark indices, the achievement level is evaluated at 100%.

- Exceed ratio of training hours received per employee over that of comparable companies (weight of 125 out of 1,000).

The number of training hours provided in 2022 amounts to 68.7 hours/employee, far higher than comparable companies according to FUNDAE (State Foundation for Employment Training), far exceeding full compliance with the objective. As the number of hours has exceeded 60 per annum, the achievement level is evaluated at 100%.

b) **Long-term variable remuneration:** Long-term incentive plans seek to incentivise the creation of long-term value, aligning the interests of the directors and shareholders through the granting of shares.

The 2017-2019 Strategic Bonus has a term of six years, with the period covering financial years 2017 to 2019 being the period for evaluation of the performance level in relation to the parameters to which said Bonus is linked, and the period covering financial years 2020 to 2022 being the period for payment thereof, which was made through the deferred delivery of shares over those three years. The third of the three deliveries of shares was made on 23 February 2022, after the Remuneration Committee issued a report confirming that the grounds for this deferred variable remuneration still applied.

The 2020-2022 Strategic Bonus has a term of six years, with the period covering financial years 2020 to 2022 being the period for evaluation of the performance level in relation to the parameters to which the 2020-2022 Strategic Bonus is linked, and the period covering financial years 2023 to 2025 being the period for payment thereof, which will be made through the deferred delivery of shares over those three years. Performance is evaluated based on the following financial, business and sustainable development parameters, which present a challenging scenario for a company that continues to have profitable growth and is financially strong and committed to the Sustainable Development Goals:

- 2022 consolidated Net Profit (30% Weight). Target (4,200 Million). Result 4,339 Million. Achievement level 100%.

- Increase total shareholder return (2020-2022) as compared with the Euro Stoxx Utilities Index (20% Weight). Index result + 18.92 bp. Achievement level 100%.
- Improve financial strength measured through the FFO/Net Debt ratio (20% Weight)
  Target (22%) Result 25.43%. Achievement level 100%.

- Parameters related to the Sustainable Development Goals (“SDGs”) (30% Weight):
  
  o Reduction in the average intensity of CO₂ emissions of the Iberdrola group
    (10% weight). Target (average intensity of own emissions of CO₂ equal to 105
    g CO₂/kWh in the 2020-2022 period). Result 93 g CO₂/kWh. Achievement
    level 100%.

  o Increase the number of suppliers subject to sustainable development policies
    and standards (10% weight). Target (70% main suppliers). Result 77.6%.
    Achievement level 100%.

  o Close the salary gap between women and men at the Iberdrola group level
    (10% weight). Target (Less than 2%). Result of positive pay gap in favour of
    women of 5.5%. Achievement level 100%.

B.8  Indicate whether certain variable components have been reduced or clawed back when,
in the former case, payment of non-vested amounts has been deferred or, in the latter
case, they have vested and been paid, on the basis of data that have subsequently been
clearly shown to be inaccurate. Describe the amounts reduced or clawed back through
the application of the “malus” (reduction) or clawback clauses, why they were
implemented and the years to which they refer.

During financial year 2022 there has been no reduction in, nor any demand for return of, any
variable component of the remuneration of the Executive Chairman or of the Chief Executive
Officer, nor have any amounts been reduced or returned due to the application of the claw-back
clause.

B.9  Explain the main characteristics of the long-term savings schemes where the amount or
equivalent annual cost appears in the tables in Section C, including retirement and any
other survivor benefit, whether financed in whole or in part by the company or through
internal or external contributions, indicating the type of plan, whether it is a defined
contribution or defined benefit plan, the contingencies covered, the conditions on which
the economic rights vest in favour of the directors and their compatibility with any type
of indemnification for early termination or cessation of the contractual relationship
between the company and the director.

The Company does not currently have any long-term savings scheme except for the Chief
Executive Officer Mr Armando Martínez, who has a group life insurance policy with an
undertaking assumed when he was a member of senior management, and which has not been
changed as a result of his appointment as Chief Executive Officer. This policy provides coverage for the supplementary social security contributions regime established to enhance the regime that would apply to him pursuant to applicable law and the Collective Bargaining Agreement.

This is a defined contribution plan applicable for retirement, death and disability for any reason, meaning that the director will have the financial rights he has acquired at the normal retirement age, and the grounds for any early termination of the contractual relationship will determine his rights. The policy expressly acknowledges that in the event of cessation of office or resignation or improper payment, the Policyholder undertakes to pay the amount that has been surrendered under the policy in relation to the retirement contingency.

B.10 Explain, where applicable, the indemnification or any other type of payment deriving from the early cessation, whether at the company's or the director's initiative, or from the termination of the contract in the terms provided therein, accrued and/or received by directors during the year last ended.

Pursuant to the provisions of Section 4.3 of the Director Remuneration Policy regarding the non-competition commitment of external non-proprietary directors, Mr Francisco Martínez Córcoles, who resigned as a director on 25 October 2022, received a severance payment equal to 90% of the fixed amount he would have received for the remainder of his term, with a maximum equal to double the 90% of said fixed annual amount. The amount of this severance payment is shown in section C of this Report.

B.11 Indicate whether there have been any significant changes in the contracts of persons exercising senior management functions, such as executive directors, and, if so, explain them. In addition, explain the main conditions of the new contracts signed with executive directors during the year, unless these have already been explained in Section A.1.

The new contract of the Chief Executive Officer Mr Armando Martínez Martínez, who was appointed in financial year 2022 and previously held the position of Business CEO, complies with all requirements and conditions of Iberdrola's Director Remuneration Policy approved on 18 June 2021. The contract specifically includes the following conditions:

- Indefinite duration.
- The Chief Executive Officer’s contract is governed by the regulations established under applicable law for this case.
- Compliance with the Governance and Sustainability System.
- Commitment not to compete during the effective period of the contract and for one year post-termination. In compensation for this post-contractual commitment not to compete, he is entitled to compensation equal to one annual salary, which will include any severance payment for termination of contract in all cases.
- Duty of confidentiality both during the effective period of the contract and following termination of the relationship.

The provisions of Iberdrola’s Director Remuneration Policy have been applied for the Chief Executive Officer’s remuneration, with the following structure:

- Fixed remuneration: €1,000 thousand.

- Short-term variable remuneration (annual bonus): maximum of €1,500 thousand.

- Long-term variable remuneration (strategic bonus): beneficiary of variable remuneration plans for the executive directors. Up to a maximum of 240,000 shares in the case of the Chief Executive Officer, which was assigned to him in 2020 when he was a member of senior management and has not been changed as a result of his appointment as Chief Executive Officer, for the 2020-2022 Strategic Bonus, with deliveries pursuant to prior evaluation in 2023-2025.

- Application of malus and clawback clauses under Iberdrola’s Director Remuneration Policy.

Finally, the Chief Executive Officer is entitled to receive severance pay equivalent to two times his annual salary in the event of termination of his executive relationship with the Company, provided that said termination is not due to a breach attributable to the beneficiary or solely due to a voluntary decision thereof. In addition, a general termination notice period of three months.

B.12 Explain any supplementary remuneration accrued by directors in consideration of the provision of services other than those inherent in their position.

During 2022 there was no supplementary remuneration for the directors for services other than those inherent in their position.

B.13 Explain any remuneration deriving from advances, loans or guarantees granted, indicating the interest rate, their key characteristics and any amounts returned, as well as the obligations assumed on their behalf by way of guarantee.

During 2022 there was no remuneration deriving from advances, loans or guarantees granted, indicating the interest rate, their key characteristics and any amounts returned, as well as the obligations assumed on their behalf by way of guarantee.

B.14 Itemise the remuneration in kind accrued by the directors during the year, briefly explaining the nature of the various salary components.

Remuneration in kind for all members of the Board of Directors is not significant and has not exceeded €220 thousand (mainly the employee electricity rate and health and casualty insurance).
B.15 Explain the remuneration accrued by any director by virtue of payments made by the listed company to a third company in which the director provides services when these payments seek to remunerate the director’s services to the company.

During 2022 no remuneration was accrued by the directors of Iberdrola by virtue of payments made by the listed company to a third company in which the director provides services.

B.16 Explain and detail the amounts accrued in the year in relation to any other remuneration concept other than that set forth above, whatever its nature or the group entity that pays it, including all benefits in any form, such as when it is considered a related-party transaction or, especially, when it significantly affects the true image of the total remuneration accrued by the director. Explain the amount granted or pending payment, the nature of the consideration received and the reasons for those that would have been considered, if applicable, that do not constitute remuneration to the director or in consideration for the performance of their executive functions and whether or not has been considered appropriate to be included among the amounts accrued under the “Other concepts” heading in Section C.

The Executive Chairman has received remuneration as chairman of the Boards of Directors of Avangrid, Inc. and of Neoenergia S.A. The amount of said remuneration is reflected in section C of this Report.

**Observations**

Ms Samantha Barber and Mr Jose Walfredo Fernández are not included in this table as they ceased to be members of Iberdrola’s Board of Directors on 26 October and 6 August 2021, respectively.
D OTHER INFORMATION OF INTEREST

If there are any significant issues relating to directors’ remuneration that it has not been possible to include in the foregoing sections of this report, but which it is necessary to include in order to provide more comprehensive and reasoned information on the remuneration structure and practices of the company with regard to its directors, list them briefly.

As is customary, in January 2023 the Company asked Ernst & Young (EY) to prepare a benchmark analysis of the total remuneration of the Executive Chairman.

This analysis used the following criteria to select the comparison group:

1. Utilities (5 selected companies):
   – Companies listed on the Stoxx Europe 600 and S&P 500 Utilities indices.
   – Companies belonging to the European Round Table of Industrialists and Business Round Table.
   – Turnover in the last financial year of at least 50% of IBERDROLA’s turnover, provided that the market capitalisation exceeds €10,000 million. This minimum turnover standard is not applied to companies with a market capitalisation higher than that of IBERDROLA.
   – Companies in which the government has a management or ownership stake have been eliminated.

2. Conglomerate sample (33 selected companies):
   – Companies listed on the FTSE Eurotop 100 and S&P 500 indices.
   – Companies belonging to the European Round Table of Industrialists and Business Round Table.
   – Turnover in the last financial year and market capitalisation, between approximately 50% and 200% of IBERDROLA’s size.
   – International presence and geographic diversity comparable to those of IBERDROLA.
   – Financial services and insurance companies excluded.

3. Top IBEX 35 companies by capitalisation (3 selected companies).

4. European companies positioned to tackle the energy transition (4 selected companies).

The list of companies is as follows:

Utilities:

DUKE ENERGY CORP
E.ON SE
EXELON CORP
NEXTERA ENERGY

www.iberdrola.com
SOUTHERN CO
