

Electronic waste: a growing problem

What can you do to reduce it?

What can proper electronic waste management achieve?

It conserves natural resources
Recovered materials can be used to manufacture new products, saving resources and reducing emissions.

It protects the environment
Recycling encourages sustainable waste management, some of which is toxic, and reduces the amount of land occupied by landfills.

It creates jobs
It increases the number of people working in the recycling sector and creates a market for different types of recycled materials.
