

Hello,

Today, 5 June, we at Iberdrola are celebrating [World Environment Day](#). Established by the United Nations (UN) in 1974, this date has become a **global awareness platform** that brings together governments, businesses, experts and citizens to address issues related to the protection, preservation and conservation of the [environment](#), with the aim of promoting environmental awareness and action worldwide.

In 2026, World Environment Day is being hosted by the Republic of Azerbaijan, with support from the United Nations Environment Programme (UNEP). This year's theme focuses on the **urgent signals the Earth is sending us and the messages we choose to send back**. As part of the day, events and activities will take place not only in the capital, Baku, but across the globe and on social media under the hashtag [#NowForClimate](#).

At Iberdrola, this is not just another date in the calendar. It reflects a decision we made years ago: respect for the [environment](#) is not a business cost, but one of the values that [guides us as a company](#). To that end, we have **strengthened our commitment to sustainability**, becoming [one of Europe's most environmentally committed energy companies](#).

Our commitment in figures

85 % of installed capacity is emissions-free	€44 bn in green financing as of year-end 2025
45.64 hm³ of total water consumption	~700 facilities aligned with the Biodiversity Plan by 2030

Leaders in sustainable management and climate action

[Discover our commitment to the planet](#)

How we protect the environment at Iberdrola

The year 2030 is key – both for us and the planet. The goal is clear: to achieve a **net positive impact in the territories where we operate** by that year. To make this possible, throughout our activities we are **carefully assessing and monitoring the impact** and [interaction of our projects with their surrounding environment](#), with the aim of avoiding, minimising, restoring and compensating for any impact these infrastructures may have on natural capital.

Through our activities, we create environmental, social and economic value

The foundations of our business

- 1** Generating electricity through renewable energy
- 2** Developing smart grids and efficient storage
- 3** Electrifying demand

What we are doing to protect the environment

Climate Action Plan
Sets out a roadmap with the ambition of achieving **CO₂ equivalent emissions neutrality for Scope 1 by 2030**, and **net zero CO₂ equivalent emissions across all scopes before 2040**.

Biodiversity Plan
Establishes the Group's mechanisms and tools for measuring and addressing biodiversity loss, with a specific objective of generating a **net positive impact** in the territories where Iberdrola operates **by 2030**.

Circular Economy Plan
Defines the workstreams aimed at the sustainable use of resources throughout our value chain. A **specific target** has been established for **2030** relating to the **recycling of wind turbine blades and solar panels**.

How you can also help protect the environment.

As an individual

Choose electrification
Replace boilers and combustion-engine vehicles with electric alternatives. Fewer emissions, greater savings and [higher energy efficiency](#).

Photovoltaic self-consumption
Install [solar panels](#) and generate your own clean energy at home.

Reduce water consumption
[Water](#) and energy are interdependent resources: saving one means saving the other.

As a business

Green energy PPAs
Secure a long-term [supply of 100% renewable electricity](#) and meet your ESG objectives.

Measure your environmental footprint
Adopt a certified environmental management system to identify and [reduce your real impact](#).

Support environmentally responsible businesses
Work with companies that already count on sustainable production to multiply positive impact.

Choosing **renewable energy** is the first step towards sustainable consumption that **respects the environment**
