

For the second consecutive year, the company's website has been chosen as the best in Spain in the Webranking 2025-2026 report

Iberdrola, the only Spanish company among the 10 best corporate websites in Europe

- *The ranking, produced each year by the international consultancy Comprend, classifies the websites of Europe's 500 largest companies according to their transparency, functionality and accessibility.*
-

Iberdrola has positioned itself as the only Spanish company on the list of the 10 best corporate websites in Europe, according to the *Webranking 2025-2026* report from the international consultancy Comprend. This study, a benchmark in corporate digital communication, ranks 500 companies after analysing more than 600 companies across Europe.

What's more, Iberdrola's website has been recognised as the best corporate website in Spain for the second year running. Europe's largest electricity company and one of the two largest in the world by stock market value achieved 87.3 out of 100 points, representing a 10% increase on the previous edition and more than 95% compared with 2020.

This progress reflects Iberdrola's commitment to transparency, high-quality information and accessibility. At the European level, this improvement has enabled the Group to climb nine places in the *Europe 500* list, reaching number six.

The Group's website (www.iberdrola.com) stands out with performance close to or above 90% in most of the 10 sections that make up the ranking, never dropping below 70%. This exceptional performance places Iberdrola ahead of its competitors.

The [homepage](#) and the [Sustainability](#) section score almost the highest possible points, closely followed by [Corporate governance](#), [Careers](#) and [Shareholders and investors](#), all with strong results.

As highlighted in the *Webranking 2025–2026* report, “the website offers a complete and easy-to-use experience that responds effectively to stakeholder needs”.

As strengths, the study identifies the progress in transparency within the Governance section, which places Iberdrola in a strong position compared to its peers and aligns it with the growing expectations of stakeholders. It also highlights the strength of its employer brand, communication regarding recruitment and the continuous improvement in the Sustainability section, which shows how the company integrates these aspects into its strategy and responds effectively to related information needs.

A benchmark for stakeholders

Through its *Webranking*, Comprend conducts a comparative analysis of the corporate websites of 638 European companies selected by market capitalisation in the Stoxx All Europe 800 index.

This ranking is a key indicator of transparency and the only one based on the expectations of the main stakeholder groups in areas such as financial reporting, corporate governance, investor relations, sustainability and employer branding.

Every year since 1997, the consultancy has surveyed analysts, investors, journalists and jobseekers, among others, to understand what they expect from a corporate website. Their responses define the evaluation criteria for the index, which includes a total of 264 measurement parameters.

About Iberdrola

With a market capitalisation of more than €120 billion, Iberdrola is Europe's largest electricity company and one of the two largest worldwide. The Group supplies more than 100 million people around the world and has a workforce of more than 44,000 employees and assets exceeding €160 billion. In 2024, Iberdrola recorded revenues of almost €50 billion and a net profit of €5.6 billion. The company contributes around €10.3 billion in tax payments in the countries where it operates and supports more than 500,000 jobs across its suppliers thanks to purchases that exceeded €18 billion in 2024.

Since 2001, Iberdrola has invested more than €175 billion in electricity networks, renewable energy and energy storage to help create an energy model based on electrification. The company has nearly 1.4 million kilometres of electricity networks in the United States (New York, Connecticut, Maine and Massachusetts), the United Kingdom (Scotland, England and Wales), Brazil (the states of Bahia, Rio Grande do Norte, Pernambuco, São Paulo and Mato Grosso do Sul, as well as Brasília) and Spain, as well as 57,000 MW of capacity worldwide, of which more than 45,000 MW are renewable.
