

Iberdrola's distributed electricity grew by 7.5% in 2025 due to higher demand and electrification

- *Strong growth in the United Kingdom is highlighted, driven by the contribution of SP Electricity North West.*
- *Installed capacity reaches 58,343 MW (+3.2%), with significant growth in wind power and storage.*

Distributed energy

The energy distributed by Iberdrola worldwide during the 2025 financial year increased by 7.5% to a record 255,976 gigawatt-hours (GWh), driven by the United Kingdom (+52.2%, which already includes the contribution from SP Electricity North West), according to information submitted to the Spanish National Securities Market Commission (CNMV).

Installed capacity

At the end of 2025, Iberdrola's installed capacity worldwide reached 58,343 megawatts (MW), representing an increase of 3.2%. Of this figure, 40.5% corresponds to onshore and offshore wind power, 22% to hydroelectric power, and 15% to solar power.

Also noteworthy is the increase in battery storage capacity, which is now 683 MW, with developments in Australia, Spain, and the United Kingdom.

By areas, the most notable increases in capacity are Iberdrola Energía Internacional, up 19% for the year, driven by new plants installed in Australia; the United Kingdom, where capacity grew by 8% due to the installation of wind and battery capacity; and the United States, where capacity increased by 5%.

About Iberdrola

With a capitalisation of 125,000 million euros, Iberdrola is the largest electricity company in Europe and one of the two largest in the world. The Group serves more than 100 million people worldwide and has a workforce of more than 44,000 employees and assets of more than 160,000 million euros. In 2024, Iberdrola recorded revenues of almost 50,000 million euros, a net profit of 5,600 million euros. The company contributes nearly 10,300 million euros in tax contributions in the countries in which it operates and supports more than 500,000 jobs in its suppliers thanks to purchases that exceeded 18,000 million euros in 2024.

Since 2001, Iberdrola has invested more than 175,000 million euros in electricity grids, renewable energies, and energy storage to contribute to the creation of an energy model based on electrification. The company has nearly 1.4 million km of power grids in the United States (New York, Connecticut, Maine and Massachusetts), the United Kingdom

(Scotland, England and Wales), Brazil (Bahia, Rio Grande do Norte, Pernambuco, São Paulo and Mato Grosso do Sul, as well as Brasilia) and Spain, as well as 57,000 MW of capacity worldwide of which more than 45,000 MW are renewable.
