

## Iberdrola completes the sale of its business in Mexico

- *The transaction forms part of the Group's strategy to prioritise investments in its regulated network businesses and generation operations with long-term contracts, as well as in key markets such as the United States and the United Kingdom*
  - *The scope of the transaction includes 2.6 GW of installed capacity, commercial operations and the portfolio of projects under development*
- 

Following receipt of the necessary regulatory approvals, Iberdrola has completed the sale of its business in Mexico. The scope of the transaction includes 2,600 MW of installed capacity currently in operation – 1,368 MW from combined-cycle and cogeneration plants, and 1,232 MW from wind and photovoltaic assets – as well as the commercial operations and the portfolio of generation projects, which the buyer intends to bring into operation in the future in line with its expansion plans in the country.

The transaction forms part of Iberdrola's strategy to focus its investments on its regulated transmission and distribution network businesses and generation operations with long-term contracts, as well as on key markets such as the United States and the United Kingdom.

### **About Iberdrola**

With a market capitalisation exceeding €138 billion, Iberdrola is Europe's largest electricity company and one of the two largest globally. The Group supplies energy to more than 100 million people worldwide, with a workforce of 45,400 employees and assets totalling €161 billion. In 2025, Iberdrola reported a record net profit of €6.285 billion. The company contributes around €10.4 billion annually in taxes across the countries in which it operates and supports more than 500,000 jobs throughout its supply chain, driven by €13.2 billion in procurement from tens of thousands of suppliers.

Since 2001, Iberdrola has invested more than €175 billion in electricity networks, renewable energy and energy storage to advance an electrification-based energy model. The company operates approximately 1.4 million kilometres of electricity networks in the United States (New York, Connecticut, Maine and Massachusetts), the United Kingdom (Scotland, England and Wales), Brazil (Bahia, Rio Grande do Norte, Pernambuco, São Paulo, Mato Grosso do Sul and Brasília) and Spain. It also has total installed capacity of 58,000 MW worldwide, of which more than 46,000 MW is renewable.
