Iberdrola is building its first large-scale battery in the United States

- *Shutler will have a storage capacity of 41 MW and 82 MWh and will enhance the reliability of the electricity system on the northern Pacific coast, where the Group has 3,000 MW of generation capacity*

Iberdrola is expanding its investments in energy storage into the US market with the construction of its first battery facility in the country. The Shutler project, located in Gilliam County, Oregon, has an installed capacity of 41 megawatts (MW) and a storage capacity of 82 megawatt-hours (MWh).

Shutler will help to strengthen the stability of the electricity grid in the north-west of the country, on the Pacific coast, where Avangrid – the Group’s US subsidiary – already has 3,000 MW of generation capacity. The project forms part of Iberdrola’s strategy to implement solutions that facilitate the integration of renewable energy and improve the system’s resilience against a backdrop of growing electricity demand.

The project will enable energy to be stored during periods of low consumption or high renewable generation and released when necessary, optimising the energy system and promoting a real-time balance between supply and demand. This type of infrastructure is becoming increasingly important in the context of growing electrification.

The project, which is scheduled to come on stream in 2027, will be located alongside other Avangrid renewable energy facilities already in operation or under development in the area.

About Iberdrola

With a market capitalisation exceeding 140,000 million euros, Iberdrola is Europe’s largest electricity company and one of the two largest in the world. The Group serves more than 100 million people worldwide and has a workforce of 45,400 employees and assets totalling 161,000 million euros. In 2025, Iberdrola recorded a record net profit of 6,285 million euros. The company pays around 10,400 million euros in tax contributions in the countries where it operates and supports more than 500,000 jobs across the entire supply chain, thanks to 13,200 million euros in purchases from tens of thousands of suppliers.

Press release
24 June 2026

Since 2001, Iberdrola has invested more than 175,000 million euros in electricity grids, renewable energy and energy storage to help create an energy model based on electrification. The company operates nearly 1.4 million km of electricity grids in the United States (the states of New York, Connecticut, Maine and Massachusetts), the United Kingdom (Scotland, England and Wales), Brazil (the states of Bahia, Rio Grande do Norte, Pernambuco, São Paulo and Mato Grosso do Sul, as well as Brasília) and Spain, as well as 58,000 MW of capacity worldwide, of which more than 46,000 MW is from renewable sources.
