

Iberdrola distributed nearly 207,000 GWh of electricity in September, up 5.8%, driven by the United Kingdom

DISTRIBUTED ELECTRICITY

- *In the first nine months of the year, distributed electricity grew by 22.8% in the United Kingdom thanks to higher demand and the positive impact of the integration of the Manchester distributor, Electricity North West*
- *The growth in distributed electricity between July and September stands out, especially in Spain (+4.8%) and Brazil (+6.9%)*

PRODUCTION

- *Production reached 90,560 gigawatt hours (GWh) in the first nine months, up 3%*
- *In the third quarter of the year, production increased by 8.2%*
- *Generation capacity stands at 57,205 megawatts (MW), which is 2,352 MW more than a year ago*

Distributed electricity

The electricity distributed by Iberdrola globally increased by 5.8% as of September 2026, reaching 206,947 gigawatt hours (GWh). By geographical area, growth in the United Kingdom stands out, where it increased by 22.8% due to higher demand and the integration of the Manchester distributor, Electricity North West.

Electricity demand has continued to accelerate in the third quarter of the year thanks to electrification, with increases in distributed electricity of 4.8% in Spain and 6.9% in Brazil between July and September.

Production

Iberdrola's production in the first nine months of the year reached 90,560 gigawatt hours (GWh), up 3%. By technology, offshore wind stood out, increasing by 16% and, by geographical area, the highest growth was recorded in the United Kingdom (+18.5%), the United States (+9.8%) and the rest of the world (+11.5%).

Also noteworthy is the increase in production between July and September, in which it grew by 8.2%.

Generation capacity

Generation capacity stands at 57,205 megawatts (MW), which is 2,352 MW more than in the previous period. In this regard, the increases in offshore wind, with 511 MW added (+20.9%), solar, which has increased capacity by 957 MW (+12.2%) and batteries, with 235 MW more (+46.9%), stand out.

By geographical area, 744 MW have been added in the United States (representing a 7% increase in installed capacity), in Australia generation capacity increases by 701 MW and in Germany by more than 350 MW.

About Iberdrola

With a capitalization of more than €140 billion, Iberdrola is the largest electricity company in Europe and one of the two largest in the world. The Group serves more than 100 million people worldwide and has a workforce of 45,400 employees and assets of €165 billion. In 2025, Iberdrola recorded a record net profit of €6,285 million. The company provides nearly €10.4 billion in tax contributions in the countries in which it operates and supports more than 500,000 jobs throughout the supply chain, thanks to €13.2 billion in purchases from tens of thousands of suppliers.

Since 2001, Iberdrola has invested more than 175,000 million euros in electricity grids, renewable energies and energy storage to contribute to the creation of an energy model based on electrification. The company has nearly 1.4 million km of electricity grids in the United States (states of New York, Connecticut, Maine and Massachusetts), the United Kingdom (Scotland, England and Wales), Brazil (states of Bahia, Rio Grande do Norte, Pernambuco, São Paulo and Mato Grosso do Sul, as well as Brasília) and Spain, as well as 57,000 MW of capacity worldwide, of which more than 46,000 MW are renewable.
