

BRIEFING NOTE

The company is already the leading wind farm developer in the region, with an installed capacity of 856 MW

Iberdrola doubles its commitment to clean energy in Andalusia, with 1,100 new renewable MW

- It has begun the construction of Andévalo and has several photovoltaic projects and one wind power project in the pipeline -all of them with access to the grid- in five provinces
- Iberdrola's plan to relaunch clean energies in Spain includes the installation of 3,000 renewable MW in the run up to 2022

Iberdrola doubles its commitment to clean energy in Andalusia, with more than 1,100 new renewable MW in the pipeline. The company, which has just begun the construction of its first photovoltaic plant in the region, has several photovoltaic projects and one wind farm project in the pipeline -all of them with access to the grid- in five provinces of the autonomous region.

In Huelva, Iberdrola has planned photovoltaic plants with a total installed capacity of 420 MW. In this province, the company has begun the construction of its first photovoltaic plant in the region, Andévalo (50 MW), which will be operational in 2020.

The project is built within the largest wind power complex in Continental Europe, Andévalo, promoted and managed by Iberdrola since 2010, and will guarantee the supply of green electricity to the four HEINEKEN Spain factories and their offices. The photovoltaic plant will avoid the emission into the atmosphere of more than 100,000 tonnes of CO₂ per year and will help boost the economy and jobs.

In Seville, pipeline projects cover a total of 150 photovoltaic MW and, in Granada, definite projects make up 300 MW of installed capacity. Iberdrola's renewable plans in the region are completed with 210 MW photovoltaic in Malaga, as well as a wind farm -Martín de Jara, with a capacity of 36 MW- and 30 photovoltaic MW in the province of Cadiz. The green energy production of these new projects will supply a population equivalent to 600,000 homes; similar for example to that of the city of Malaga.

With these projects -whose construction is forecast for 2020 and 2021- Iberdrola is raising its commitment to clean energy in Andalusia and will double its renewable presence in the region, where it is already the leading wind farm developer, with a capacity of 856 MW installed in Huelva (292 MW), Granada (198 MW), Cadiz (167 MW), Malaga (133 MW), Almeria (50 MW) and Seville (16 MW).

Renewable investment strategy in Spain

Iberdrola's plan to invest in renewable energies in Spain includes the installation of 3,000 new MW by 2022. By 2030, company forecasts point to the installation of 10,000 new MW. These actions will enable jobs to be created for 20,000 people.

BRIEFING NOTE

At present, and with these processes under way, Iberdrola's projects under construction or in the pipeline -wind and photovoltaic- in Spain total more than 3,600 MW in regions such as Extremadura, Castilla-La Mancha, Castilla y León, Navarra, Aragon, Andalusia, Murcia and Cantabria.

In Spain, Iberdrola is the leader wind developer -with an installed capacity of 5,793 MW- and renewable energy leader, with 16,027 MW installed (over 30,300 MW worldwide), making its generation fleet one of the cleanest in the energy sector.

Iberdrola's commitment to a decarbonised economic model has led it to earmark 34 billion euros for global investments between now and 2022 in renewable energies, smart and robust distribution networks, and large-scale storage technologies, all on top of the 100 billion it has already invested in these areas since 2001.

About Iberdrola

[Iberdrola](#) is a global energy leader, the number-one producer of wind power, and one of the world's biggest electricity utilities by market capitalisation. The group supplies energy to almost 100 million people in dozens of countries including Spain, the United Kingdom (ScottishPower), the United States (AVANGRID), Brazil (Neoenergia), Mexico, Germany, Portugal, Italy and France. With a workforce of around 34,000 and assets in excess of €113bn, it achieved a turnover of €35bn and a net profit of €3bn in 2018.

Iberdrola is leading the transition towards a sustainable energy model through investments in renewable energy, smart grids, large-scale energy storage and digital transformation, to offer its customers the most advanced products and services. Thanks to its commitment to clean energy, Iberdrola is one of the companies with the lowest emissions and an international benchmark for its contribution to sustainability and the fight against climate change.
