

# THE CARBON FOOTPRINT OF A PAIR OF JEANS

During its manufacturing process an equivalent of **13 kilos of carbon dioxide** are released into the environment.

Its manufacture process involves the use of something more than **2,000 litres of water.**

**10 litres of chemical products and dyes** are used in the manufacturing process.

The rinses result in the use of over **1,000 litres of water.** Apart from the electricity used for drying and ironing.

The degradation process of the cotton, if it ends up in a landfill, can take up to **5 months** and polyester, up to **200 años.**
