

José Andalón — SHAPES

Hi, I'm José Andalón, co-founder of Math2me, and edutuber since 2009. Mathematics will always be present in your life and that's why it's very important to have a good relationship with it. It's incredible to see that you learn concepts from primary school, but years go by and you still don't understand them. For example, percentages, fractions or statistics topics that are used in our lives. That is why it is important to incorporate the concept of "the art of problem solving", which makes you use all your previous knowledge to arrive at the idea that solves them.

Unfortunately, to develop this kind of art you need time and feedback, something that is lacking in some traditional classrooms. However, we live in the age of information and connectivity and artificial intelligence, which makes it possible for this to be corrected when we incorporate it into the subject of teaching. So it is clear that the skills to be developed depend on the individual.
